Operating temperature: –55°C to +105°C (tin);
–55°C to +125°C (gold)

Vibration: 10-2000-10 Hz in 20 minutes at .06 [1.52] or
15 G's for 3 sweeps in each of 3 axes

Shock: 100 G's sawtooth; 6 shocks

Material and Finish

Housings: Glass-filled thermoplastic 94V-0 rated (black)

Contacts: Phosphor bronze; finish—see charts

Alternate materials and platings available, **request Catalog No. 79-552.**

AMP Miniature Spring Socket

Features: ■ Bellmouth design allows easy pluggability ■ Helical spring design accepts round, square or rectangular leads without concern for socket orientation ■ Wide range of socket sizes covers a pin range of .010 to .065 diameter and board thickness of .031 to .125 ■ Low profile head of .022 allows greater board-to-board clearance ■ Small head diameter allows centerline spacing of .100 ■ Meets gold plating specifications of MIL-G-45204, Type II and tin plating specifications of MIL-T-10727, Type I

Miniature Spring Socket on Polyester Strip

Features: ■ Bullet nose design for high volume application ■ Available with silicone seal ■ Two series cover a pin range of .012 to .026 diameter and board thickness of .031 to .125 ■ Sockets are ovalized for board retention in high speed soldering operations ■ Sockets accept round, flat or rectangular leads ■ Bellmouth design allows easy pluggability ■ Low clearance ■ Small head diameter allows centerline spacing of .100 ■ Meets gold plating specifications of MIL-G-45204, Type II and tin plating specifications of MIL-T-10727, Type I ■ Strip sockets may be applied using pneumatic hand tools, automatic bench machines or numerically controlled application equipment ■ Application rates of 2000 to 9000 per hour are obtainable

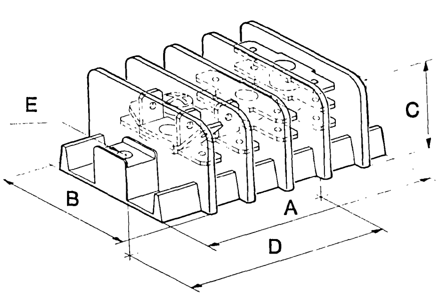
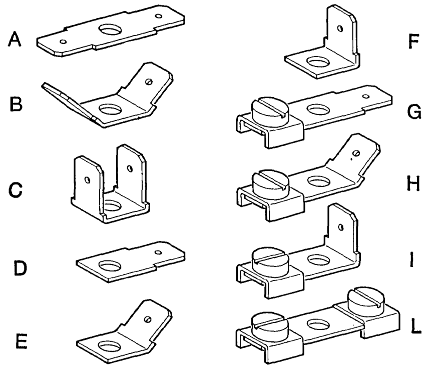
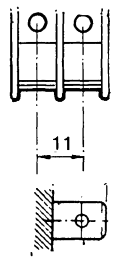
TERMINAL BLOCKS

Dimension in mm





PA32



6.3 Tab

Wire size for screw terminals up to 14 AWG

Approval

USA

UP TO 16 POLES

Barrier type terminal consisting of a base in white polyamide 6,6 self-extinguishing to UL V_2 with a selection of 10 different terminal arrangements. Each pole may have up to 3 tabs, differently angled (6,3 x 8,0) on both sides or M4 screw on selected side or sides. Single or double rivetting is used to assemble terminals to base.

The double rivetting required to meet EEC standards, where terminals must not move in relation to each other.

Poles: Up to 16 as required.

Rating: 20 amp 300 VAC.

Housing: White polyamide 6,6.

Temp. Range: Up to 125°C. Distortion at 220°C.

Metal Parts: Screws zinc passivated steel tabs nickel plated brass.

Alternatives: Select tabs/screws required.

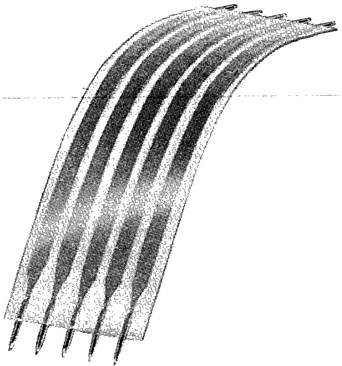
The Industry's most complete line of DIP products

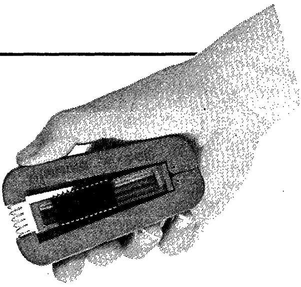
Refer to "Manufacturers and Sales Offices Directory" (yellow pages Vol. 1) for complete list of Sales Representatives and Local Distributors.

See complete data in Aries Catalog S-85

The Industry's most complete line of DIP products

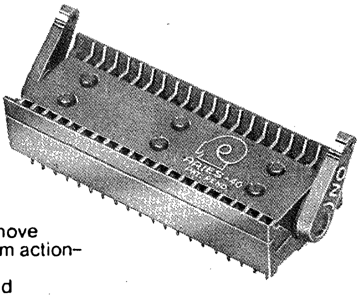


DECI-FLEX®
(SERIES 160)
Low cost, flexible multi-conductor interconnection. Available any number of conductors on .100 centers. Lengths 1", 2", 3", with polyester insulation.



NEW! ANTI-STATIC T516AS DIP-R-SIZER HAND TOOL

Molded of anti-static material...ideal for MOS devices susceptible to static damage.



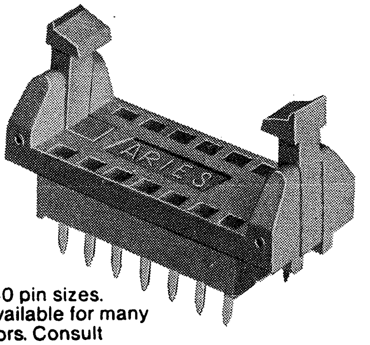
ZERO INSERTION FORCE SOCKET (SERIES 516)

Normally Open—No force to insert component.

Closed—Holds component firmly.

Open—No force to remove component. Smooth cam action–no tools required. Available 24, 28, 40 and 64 contacts.

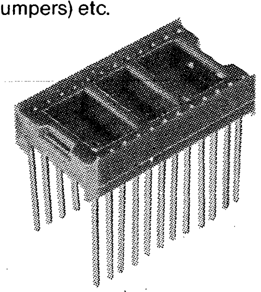
Collet EJECT-A-DIP Sockets



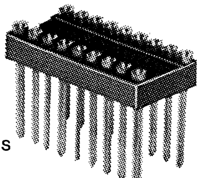
Rugged, solderable DIP socket with unique latch to lock-in jumpers, ICs, etc. Latch also ejects DIP packages without damage to pins. Ideal for high vibration environments or applications in which device leads get bent during removal. High reliability collet contacts accept round or rectangular pins. Available solder tail or wire wrap in 14, 16, 24, and 40 pin sizes. Locking latch heights available for many manufacturers' connectors. Consult factory for specials.

DIP SOCKETS—6 STYLES

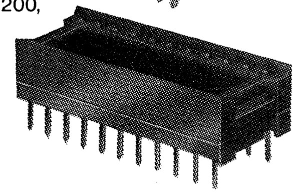
DIP SOCKETS
For mounting IC's, logic jumpers (see DIP-R-LOGIC Jumpers) etc.



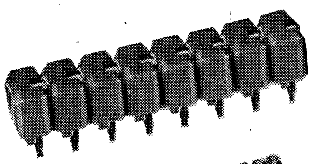
SERIES 501
Wire Wrap* Type Pins with Aries bifurcated contacts. Available: 8-10-14-16-18-20-22-24-28-32-34-36-38-40-48 Pins on .200, .300, .400 and .600 centers.



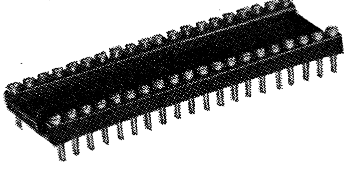
SERIES 503
LO-PRO®file Sockets—Wire wrap pins with collet style contacts. Available 2 to 64 pins in increments of 2 on .200, .300, .400, .600 or .900 centers.



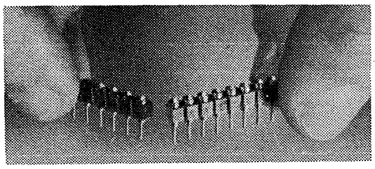
SERIES 511
Solder Type Pins with Aries bifurcated contacts. Available: 8-10-14-16-18-20-22-24-28-32-36-40 Pins on .200, .300, .400 and .600 centers.



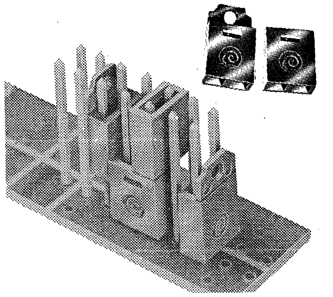
SERIES 0520 and 0525
Single row in-line sockets with "Breakable" feature. Uses stamped single beam face-grip contacts. 40 solder tail pins to a strip. Body breaks off cleanly to any desired number of contacts. Series 0525 mates with .025 square pins.



SERIES 513 and 518
Lo-PRO™ file Collet Style Sockets. Available 6 to 64 pins on .200, .300, .400, .600 and .900 centers. Series 518 is open frame.



STRIP LINE SOCKETS SERIES 0513, 0503
with "break" feature for any desired number of positions (1 to 25 pins). Available solder tail, 2 and 3 wrap pins.



MINI-LINK™ and SQUARESTIX™
Miniature jacks and a complete line of single and dual row .025 square pin products. Squarestix available up to 40 pins single row and 80 pins dual rows, both straight and right angle.

*TM—Gardner-Denver

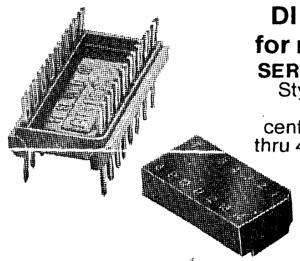
ARIES® ELECTRONICS, INC.

The Industry's most complete line of DIP products

DIP HEADERS and COVERS - 5 STYLES and SPECIALS

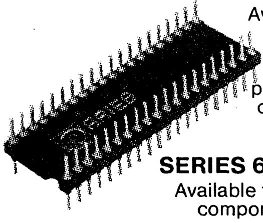


DIP HEADERS & COVERS for mounting components.

SERIES 600 with coined contacts. 2 Styles of Terminals: Post and Fork. Available 2 thru 20 pins on .300 centers; 22 pins on .400 centers; 24 thru 40 pins on .600 centers. Contact styles shown below.

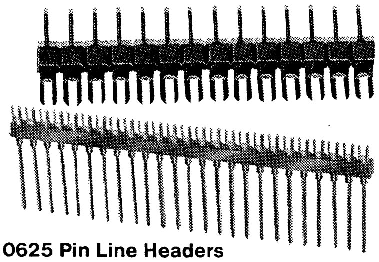
SERIES 625 with screw machine terminals. 5 Styles of Terminals. Available 2 to 40 pins—.200, .300, .400 and .600 centers.

SERIES 8625 with screw machine terminals. Available in 14-16-18-32 pins in single and double rows on .800 centers. Terminal styles shown below.



SERIES 650 COVERS: FOR HEADERS

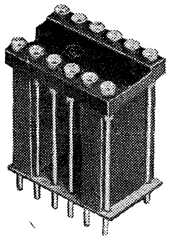
Available for 8-14-16-24-40 pin sizes to accept components of 1/8", 3/8", 1/2", or 3/4" high.



"BREAK" to length desired.

SERIES 0600 and 0625 Pin Line Headers

A single header strip both end and side stackable on .100 centers. (0600 with coined contacts). (0625 with screw machine terminals). Available: 1 to 25 pins on .100 centers.

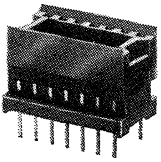


ELEVATOR SOCKETS

Useful to bring device to level required. Available from 1/4" to 1-1/4" high. Standard heights in stock; specials 3 weeks.

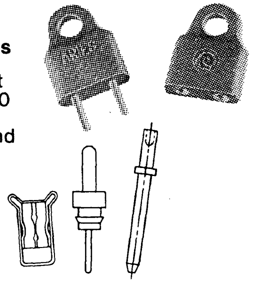
SERIES 8XXX (XXX=height)

Available 14 or 16 pin. Aries bifurcated pins on .300 centers.



COLLET STYLE CONTACTS

2 to 64 pin. Any height 1/4" to 1-1/4"



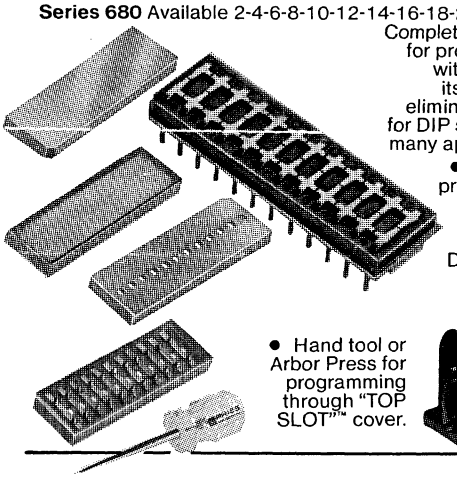
.040 Shorting Plugs and Jacks and .040 DIP Strips and Loose Pins

Plugs and jacks used to interconnect .040 sockets and/or .040 pins on .200 centers. Convenient ring handle for insertion or removal. Male straight and right angle and female socket DIP strips in convenient 10 position size ("break-off" feature for any smaller size). Also available are loose .040 female sockets, .040 male pins for staking and .040 pins for press fit.

DIP PROGRAM HEADERS and COVERS

TOP-SLOT Programmable Headers and Covers

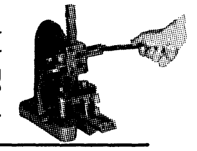
Series 680 Available 2-4-6-8-10-12-14-16-18-20-24 pins.



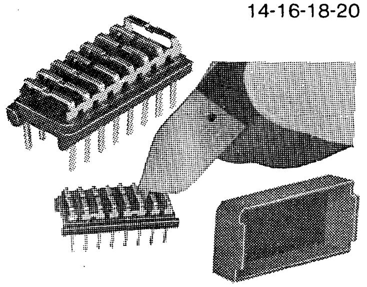
Complete versatility for programming within header itself . . . thus eliminating need for DIP switches in many applications.

- Available pre-programmed from Aries Stocking Distributors.

- Hand tool or Arbor Press for programming through "TOP SLOT"™ cover.

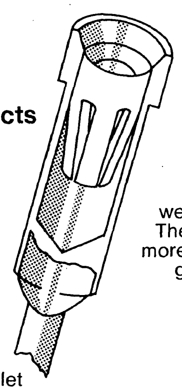


Series 675 Available 2-4-6-8-10-12-14-16-18-20 Pins on .300 centers

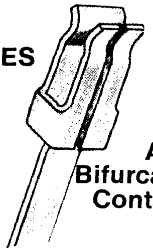


Program the header! Available pre-programmed or can be programmed by customer with needle-nose pliers or Aries Program Header Tool.

ARIES OFFERS TWO PROVEN CONTACT STYLES



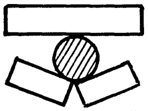
Aries Collet Contacts



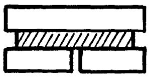
Aries Bifurcated Contacts

A superior electrical contact as well as firm, physical spring grip. The Aries bifurcated contact has more metal than any other . . . one good reason for its superiority and secure mating.

Aries collet contacts are widely used for highly reliable electrical contact at low cost. Collet accepts .015 to .020 dia. round leads. Contacts 30μ gold plated berylium copper. Body available gold or tin plated.



For round leads up to .020 dia. Redundant 3 point contact.



For flat leads up to .025 wide. Grips thickness for maximum electrical contact.

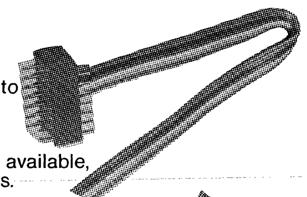
ARIES® ELECTRONICS, INC.

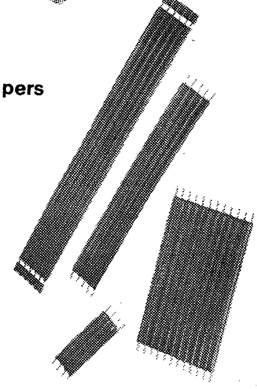
The Industry's most complete line of DIP products

DIP JUMPERS – 10 STANDARD STYLES and SPECIALS



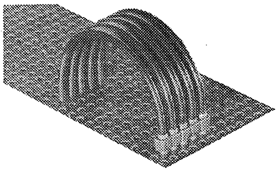
DIP JUMPERS

SERIES 100—DIP board to DIP board.
Available 4 thru 40 pins.
Any length cable.
Any connector orientation available, 12 standard configurations.

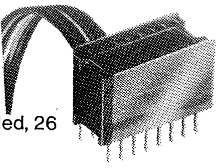


SERIES 152FB
Fusion Bonded Cable Jumpers

Available in 1" to 12" lengths in ¼" increments.
Conductors: 4 thru 12 on .100" centers.
Flexible, extruded PVC insulation on 26 gauge stranded wire conductors which are fusion bonded with an over-coat of tin for easy solderability and/or pluggability.
Fusion Bonded Cable Jumpers can be soldered directly to p.c. board or pluggable into Aries pin line sockets (Series 0513) or low cost (Series 0520).

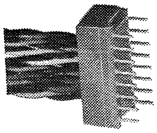


DIP-ER LOGIC SOCKET/JUMPER
SERIES 206-207-208



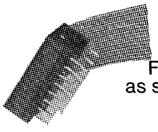
Dip-er Logic Socket Jumpers saves the space on the board for a plug in position and can be used to impose two devices into one position.
Plugs into standard 8-14-16-24 and 40 position logic panels.
Any length cable. Cable—EIA color coded, 26 AWG (7 strands 34 AWG).
Type B—600 V 105° C.

TWISTED PAIR JUMPERS



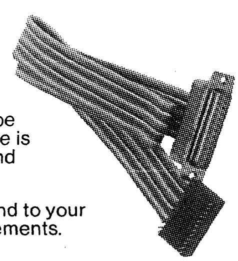
Twisted pair jumpers are available with one less number of pairs than the connector number. Example: 14 pin jumper is available with either 13 twisted pairs, all grounds connected to 14 pin, or 7 twisted pairs, all grounds connected to the opposite signal pins 8-14.

FLAT CABLE JUMPERS



Flat cable jumpers provided as 14 and 16 pin as standards, also available in 8 and 24 pin with flat wire bonded together. Excellent for high flex applications or where space is a major consideration. Most connector orientations available.

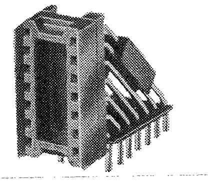
D TO DIP JUMPERS
SERIES 225



Cable assemblies using "D" Series subminiature connectors (9, 15, 25, 37 and 50 pin) on one end and Aries DIP Headers on other ends. Other end can be furnished stripped and tinned also. Cable is EIA color coded 26 AWG. Other sizes and types of cable can be accommodated.

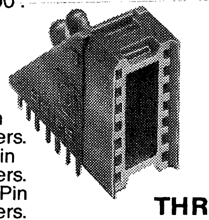
SPECIALS Aries will promptly respond to your special jumper requirements.

VERTISOCKETS 22 STYLES and SPECIALS



VERTISOCKETS®

For mounting LED Displays, Switches, Test Points. A complete line—from 2 pin for decimal to 40 pins for multiple displays.
Available for vertical, horizontal or edge card displays with optional mounting angles of 30°, 45°, 60° or 90°.
Device mounting centers .200, .300 and .600.



VERTICAL MOUNTING

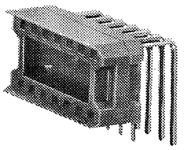
SERIES 2810— Available: 8-10 Pin (Aries bifurcated pins) on .200 centers.
SERIES 810—Available: 8-14-16 Pin (Aries bifurcated pins) on .300 centers.
SERIES 6810—Available: 8-10-14 Pin (Aries bifurcated pins) on .600 centers.

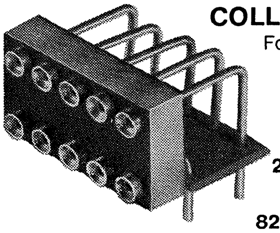
THRIFTY MODEL VERTISOCKET

High volume—low cost—bifurcated contacts 14 Pin—.300 centers
Cat. No. 14-810-90R

HORIZONTAL MOUNTING

SERIES 2820, 2822 and 2823—Available: 8-10 Pins (Aries bifurcated pins) on .200 centers.
SERIES 820, 822, 823—Available: 8-14-16-18 Pins (Aries bifurcated pins) on .300 centers.
SERIES 6823—Available: 8 to 40 Pins (Aries bifurcated pins) on .600 centers.
SERIES 822E (Economy Model)—Available: 8-14-16-18 Pins. (Aries bifurcated pins) on .300 centers. Note: One row of pins .025 x .006 with other row .025 sq.



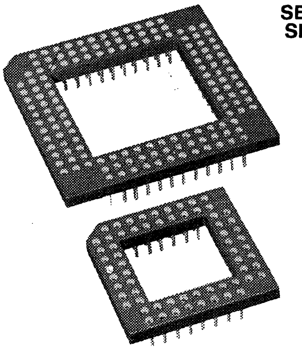


COLLET STYLE VERTISOCKET

For displays using round pins (Solder or Wire Wrap). Excellent for military applications. Can be provided with FR4 base material.

Horizontal
SERIES 2820C, 2822C, 2823C—Available: 8 and 10 pins on .200 centers.
SERIES 820C, 822C and 823C—Available: 8 to 20 pins on .300 centers in increments of two (2).

Vertical
SERIES 2810C—Available 8-10 pins.
SERIES 0810C—Available: 2 pin (for decimal) on .150 center.



PIN GRID ARRAY SOCKETS

Collet contacts on .100 centers in a square matrix for acceptance of components not on conventional DIP matrix. Available to meet any configuration of pin positions. Special low insertion force collet contacts are used to reduce insertion force of high pin count devices. Many standard sizes available from 64 to 289 pins in either tail or wire wrap styles.

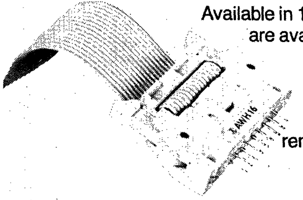
EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 34 Guides in this edition of EEM. See page 2 (A•2, B•2, C•2, D•2) of each volume to locate the Product Selection Guides that pertain to your needs.

For 100 years ASMANN has combined German ingenuity and Swiss precision to produce quality products. Now, literally thousands of high-quality popular-sized sockets and connectors are available in stock for immediate shipment. ASMANN sockets and connectors feature Swiss-machined-quality contacts and plastic bodies that meet UL 94-VO specifications.

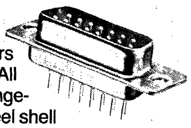
You don't have to pay a premium for quality anymore.

IDC Connectors



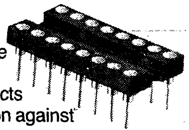
Available in 10-60 pins, these quality connectors are available in all popular sizes. Compatible with .050″ flat cable, AWG 28, they provide fast, easy assembly of mass terminations. Locking clips assure positive retention, instant removal. Four-sided shrouded header provides added pin protection.

D-Subminiature Connectors



Offered with 9-50 pins and four terminal versions, these highly reliable connectors feature permanent machined contacts. All contact points are gold plated. Interchangeable with MIL-C-24308 types. Plated steel shell minimizes EMI.

DIP Sockets



Available in 6-64 pins, these low profile sockets offer consistently high quality. Precision machined gold-plated contacts insure continuity and provide protection against capillary action. Shock and vibration specs meet MIL-STD-202.

Additional ASMANN Components

Terminal Strips:	socket & wire wrap terminals; 5-20 pins; tin or gold-plated contacts.
Pin Headers:	dual in-line configuration; IDC compatible.
Carrier Assemblies:	6-40 pins; precision machined gold-plated contacts facilitate pc board assembly.
Test Sockets:	zero insertion force; 7 milliohms resistance after 1,000 insertions.
Transistor Sockets:	TO-5 and TO-3 styles; Teflon® or nylon insulators.

®Registered DuPont trademark

- Funnel shaped four-fingered contacts provide easy IC insertion, high reliability.
- Precision Swiss machined sockets are field-proven for minimum of 1,000 cycles.
- Fit standard DIP with .100″ × .100″ (2.54 × 2.54mm) pin spacing.
- Low profile for max. packaging density.
- Closed bottom sleeve protects against solder wicking.
- Short contact legs assure contact with short-legged IC's.

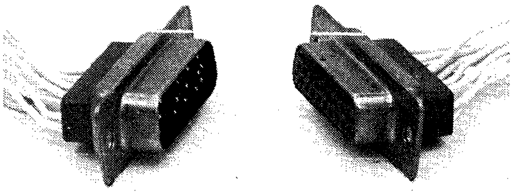
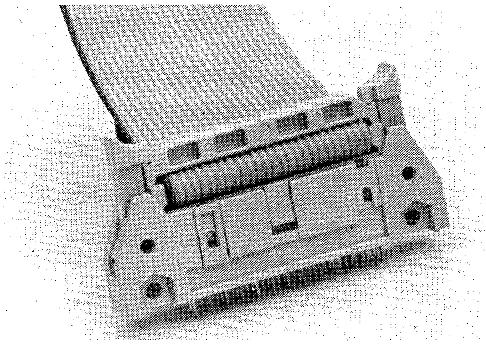
BEAD-D Subminiature Connectors



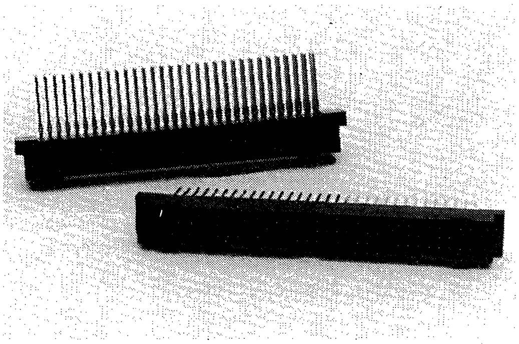
Bead has the 9, 15, 25, and 37 position right angle board mount connectors available in the all-plastic version only. These parts feature selectively plated contacts. They are designed to mount on the industry standard PCB footprint. The board mount SUB "D" connectors can be made available with tin plated contacts.

BEAD-IDC Connectors



BEAD-IDC is a complete system which terminates ribbon cable from 10 to 60 positions. The displacement contacts are used in socket connectors which mate with eject headers or BEADPOST INTERCONNECTION SYSTEM shrouded or unshrouded headers. BEAD-IDC also includes PCB transition connectors in 10 to 60 positions and DIP Connectors in 8 to 40 positions. Termination is accomplished with a handpress. The BEAD-IDC line is completely compatible with the leaders in this type of interconnect system.

BEAD-DINCONN Connectors



Bead currently has the reverse DIN post connector available which is mounted on the motherboard using the eye of the needle compliant section. Use of this pressfit contact gives the user solderless termination and repairability. Currently available in 32, 64, or 96 positions, BEAD-DINCONN will be expanding in the near future.

Beau® Barrier Terminal Strips

CONSIDER THE ADVANTAGES OF BEAU THERMOPLASTIC STRIPS

Beau thermoplastic strips offer many significant advantages. The strong, resilient barriers. The quality and uniformity of the product. Our determined commitment to engineering excellence. And, with our large selection of thermoplastic strips, the odds are you'll find what you want at Vernitron. Design in or cross over to Beau thermoplastic strips—the advantage is yours.

BEND BARRIERS WITHOUT BREAKING

Highly resilient thermoplastic reduces breakage dramatically. Production line and in-field damage are virtually eliminated.

TERMINAL TAILS ENCLOSED

Cavities are eliminated around solder terminal tails. Allows mounting on PCB without affecting circuit isolation. Eliminates entrapment of foreign matter. Reduces solder wicking.

CLOSED-SIDE STRIPS OFFER EXTRA PROTECTION

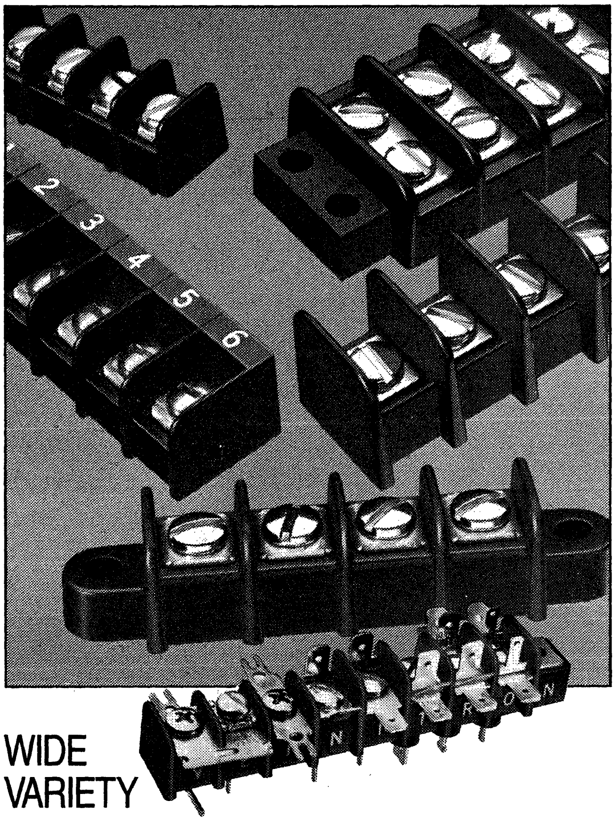
Closed side serves as a wire stop. Permits mounting components close to strip without shorting. Wires or screwdrivers can't pass through closed side to contact other wires, leads or PCB components.

HIGHEST U.L. FLAME RETARDANT RATING

Our thermoplastic materials all carry the UL 94V-0 (self extinguishing) rating.

NEAT, ACCURATE MOUNTING ENDS

All our thermoplastic strips are molded to length. None are cut down from longer strips. They're neater, without ugly saw cuts. And they are precisely the same length every time.



WIDE VARIETY OF TERMINALS

There is a broad selection of top-side and bottom terminals—including quick-connect terminals which speed assembly time, cut costs and improve connections.

RAP-ATTACH MOUNTS SAVE 40%

—details on page after next.

Beau® Barrier Terminal Strips

VERSATILE PHENOLIC STRIPS CROSS WITH THE POPULAR SIZES.

Vernitron offers one of the widest lines of phenolic barrier terminal strips available anywhere—and we have a wide variety of options to go with them. We have all the most popular sizes and styles. Compare our quality, price and lead times—we think you'll cross over to Beau.

SINGLE-ROW STRIPS IN MANY STYLES

Series 12000 and 13000 have high-impact glass-filled phenolic bases for excellent breakage resistance; color, green. The other single-row series are made of general-purpose phenolic; color, black. All styles are available with a wide choice of terminals, marker/insulation strips, imprinting, with or without mounting ends, and many other options.

DOUBLE-ROW STRIPS RANGE FROM 10 TO 50 AMPS

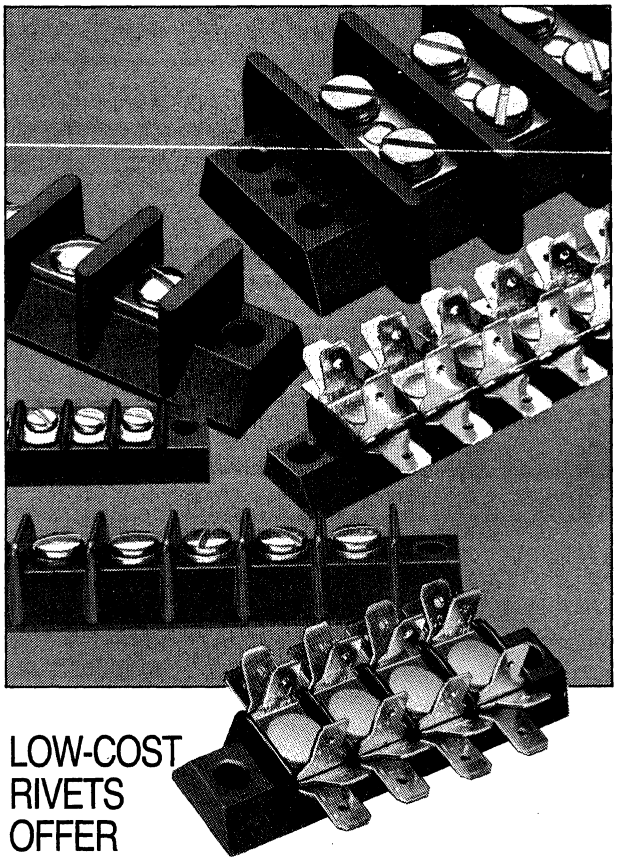
Available in general-purpose phenolic; color, black. Wide choice of terminal styles, marker/insulation strips, imprinting, with or without mounting ends, and many other options.

WIDE VARIETY OF TERMINALS

There is a broad selection of top-side and bottom terminals—including quick-connect terminals which speed assembly time, cut costs and improve connections.

OUR HIGHEST CURRENT STRIP

Series 28000 is rated at 50 A. It's our highest current strip. Series 28000 is a direct cross with series 603.



LOW-COST RIVETS OFFER GREATER SECURITY

Four series of single-row strips come with either screw or rivet (option) construction. Low-cost rivets are vibration resistant and offer greater in-field security. These strips are exact replacements for the styles shown in the table below.

Beau® Interconnection Components

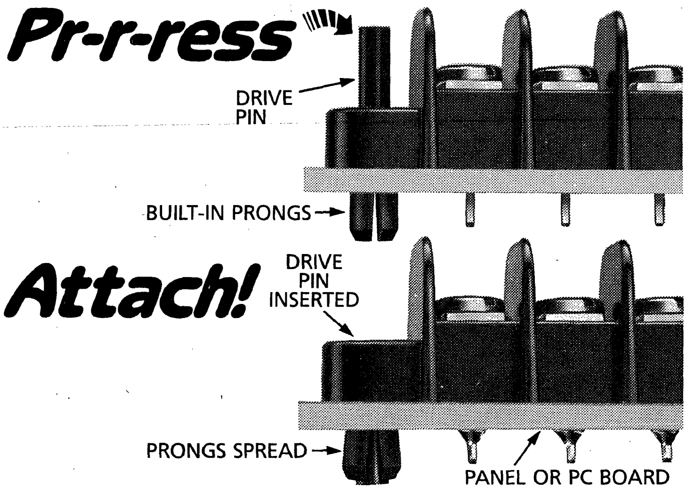
RAP-ATTACH™ MOUNTS SAVE 40% OF INSTALLED COST

Rap-Attach mounts (option) are the rapid new way to attach barrier terminal strips to PC boards or panels. When you press in the drive pins, the built-in prongs (on the bottom) spread like a blind rivet. No more time-consuming fumbling with screws and nuts. It's so easy, you can cut installed cost dramatically.

Non-conductive mounting. Thermoplastic drive pins provide greater safety.

Strain-free joints. No more counting on solder joints alone to secure strips to PCB's.

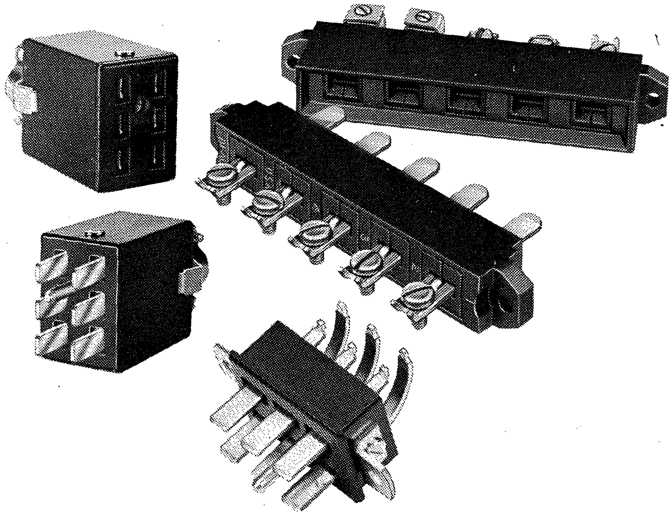
Wave solderable. To save you even more.



PLUG & SOCKET CONNECTORS

Beau connectors offer a number of significant advantages. Differences like standard pre-grounding connectors. Rugged, durable blades. Uniform-float contacts that make mating and unmating smooth and sure. Double-wipe contacts. Made in panel and cable mounting styles.

SERIES	AMPS	CONTACTS
3300	10	2-33
5400	15	4-16
5500	40,45,60	2-16
5600	40,45,60	1-5



LOW-COST SOLUTIONS TO SPECIAL INTERCONNECTION PROBLEMS

There's almost no limit to the ways we can design cost-saving interconnection devices. By integrating barrier terminal strips with other parts we can reduce your installed cost. Similarly, blade-type connectors have a wide range of possibilities. We can design for greater electro/mechanical performance, faster assembly, and more. We not only welcome your design problems, we thrive on them.

MIL-C-5015 Circular Connectors

Rear release

MS3450 - Receptacle, wall mounting
MS3451 - Receptacle, cable mounting
MS3452 - Receptacle, box mounting
MS3454 - Receptacle, jam nut mounting
MS3456 - Plug, cable connecting

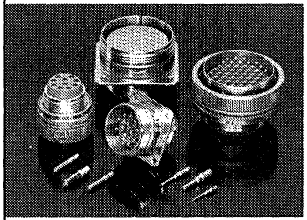
Class KS - Firewall, stainless steel
Class KT - Firewall
Class L - High temperature, fluid resistant
Class LS - High temperature, Stainless steel
Class W - General purpose

FEATURES

The Mil-C-5015 (Navy) connector specification is one of the most widely used specifications for circular connectors. The latest series, (MS345X) is suggested for new design in both Mil-Std-1353B and Aerospace Recommended Practice 1308B. Its use is increasingly popular in both military and commercial environments where high reliability and low installed cost are important.

The MS345X series incorporates a threaded coupling and removable rear release crimp contacts and is fully intermatable with existing Mil-C-5015 and threaded Mil-C 83723 Series II (USAF) connectors.

T.J. Mil-C-5015 Connectors are protected against degradation caused by caustic substances and are rated for temperature ranges from −55C to +200C. Electroless nickel or cadmium plating may be specified for applications requiring special finishes.



Mil-C-83723 Circular Connectors

Mil-C-83723/82 Receptacle, Flange mount, threaded coupling crimp socket contact.
Mil-C-83723/83 Receptacle, flange mount, threaded coupling crimp pin contact.
Mil-C-83723/86 Plug, threaded coupling, crimp socket contact.
Mil-C-83723/87 Plug, threaded coupling, crimp pin contact.
Mil-C-83723/95 Plug, threaded coupling, self locking crimp socket contact.
Mil-C-83723/96 Plug threaded coupling self locking crimp pin socket.

FEATURES

The Mil-C-83723 series III high reliability connectors are suited for a variety of applications—from commercial/industrial to the most stringent high performance, high reliability military and space requirements. This connector features the removable rear release crimp contact concept now recognized as the standard design by the military, Aerospace and commercial industries.

Fast and easy wire termination and common termination tool features provide the maximum time savings and minimize field repair. A new patented self locking feature eliminates the need for safety wire and provides visual and tactile proof of the locked condition.

Caton Connector
Corona-Free Connectors & Assemblies For Over 36 Years, recognized for quality Design and Engineering

MODIFIED MS CONNECTORS

CCM Series

Positive contact screw-on connectors features self-centering tapered contours of molded resilient silicone inserts. They afford high dependability with their positive peripheral seal. The dielectric inserts are unaffected by temperatures in the range of −70°F to +400°F. They are ozone and corona resistant.

In addition to the single contact version, the CCM series come in 2, 3, 4, 5, 7 and 8 contact versions and have shell sizes ranging from 12 to 24. They carry voltage rates from 20 to 50 KVDC.

A line of accessories including protective caps and cable clamps are available throughout the ranges offered.

THE PM 105 FROM CATON NEW

PM Series quality at lower cost

Designed for universal application in electronic and electrical engineering programs, these fully molded silicone connectors are ideal for marine and medical installations, automotive and business machine assemblies, aircraft and space technology.

The PM 105 series is vibration proof, watertight and waterproof, tested for underwater engineering projects, with high wear resistance capability. Connectors are manufactured with UL approved material, can be panel mounted, field assembled. 1000 to 5KV operating voltage. Available sheathed or unsheathed.

SILICONE IN-LINE CONNECTORS

PM200-PM300 Series

These all silicone positive end pieces snap together forming a watertight connection that can easily be disassembled or changed. The units are fully molded and offer high reliability and long life. The units are corona free and leak proof.

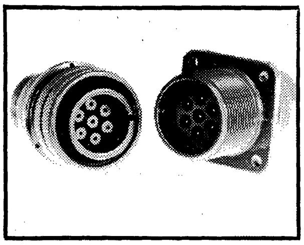
The PM 200 series is for 30 KVDC and the PM series is for 50 KVDC. Both series are available with grommet type ends for panel mounting or with optional finger grip.

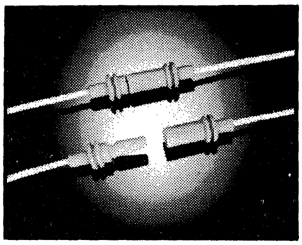
PRINTED CIRCUIT BOARD EDGE CONNECTORS

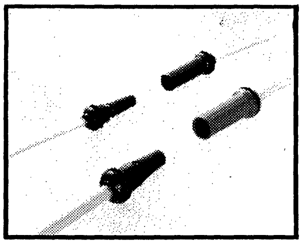
EC Series

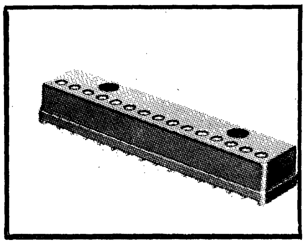
Caton manufactures literally hundreds of printed circuit board connectors including the entire line of H.H. Buggie products under a license agreement. The socket contacts are phosphor bronze with gold plating and are available in mineral filled diallyl phthalate or phenolic to meet the various MIL-M-14F type requirements. Each series comes with plugs and female receptacles.

Operating voltage is 250 volts AC RMS with a current rating of 5 amperes. Operating temperatures are −55°C to +125°C.



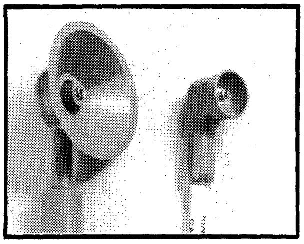


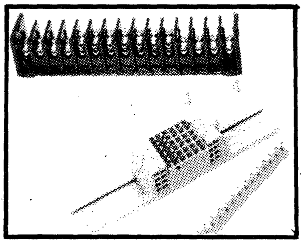


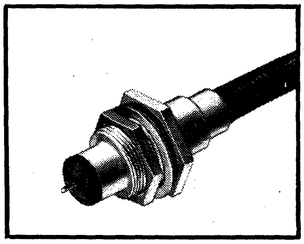


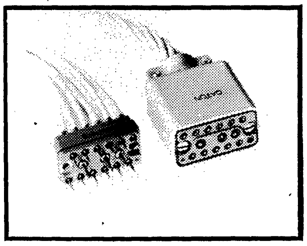
CATON

"We know what will work. . . and we have learned how many ideas will not work."









CRT ANODE LEADS

CCR Series

Caton CRT anode leads are leak proof and corona free. The lead assemblies are molded silicone with heat treated contacts. They offer excellent fire and heat resistance with ambient temperatures over 150°C.

The connectors adapt perfectly to JI-22 or JI-25 anode ball contacts. Capabilities range from 5 KV to 30 KV.

Manufactures under license from the Burndy Corporation

TERMINAL BLOCKS

MMC Series®

A high density series of terminal blocks are offered with a simple crimp-type snap in contacts. They come in standard and miniature designs and are modular in construction.

RADAR-PULSE-HI VOLTAGE CABLE ASSEMBLIES

CA 123 Series

Our high voltage cable assemblies feature factory molded ends that assure the highest possible corona free construction. Corona extinction is measured in accordance with MIL-C-17.

These cable assemblies are the industry standard and are used in virtually all radar installations world-wide. Their corona free capabilities range from 10-30 KVAC and the Hi-Pot tests from 25-75 KVAC.

The CA series comes in numerous configurations to interface with most any high-voltage/pulsed voltage requirements.

RACK & PANEL CONNECTORS

PD 15 Series®

This series is used to connect power sources to receivers, modulators and transmitters. They come in removable crimp-type and solder contacts.

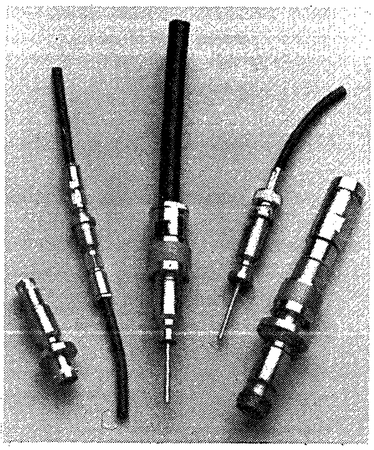
Ceramaseal

HERMETIC 50-OHM CONNECTORS

CERAMIC-METAL HIGH TEMPERATURE ULTRA HIGH VACUUM

- N, BNC, SMA, HN
- VSWR typically less than 1.3 up to 8 GHz (SMA)
- −50°C to +400°C*
- Pressure ratings 10^{-3} up to 10^{-10} torr or 1 atm. to 750 psig at 20°C BNC
- Operating voltages to 1500 volts peak (HN)

* with plug disconnected above 200°C

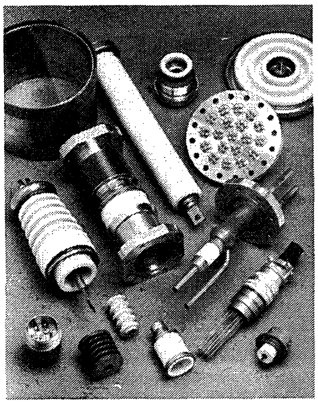


400°C VACUUM-TIGHT CONNECTORS

- **STANDARD OR 400°C PLUGS**
- **INSTRUMENTATION**
- **1 TO 37 PINS**
- ceramic-metal bonded
- single- and double-ended
- operating pressures $<10^{-10}$ torr to 100 psig
- some models have temperature range from −196°C to +400°C
- bakeable vacuum flange and weld type mountings

REQUEST CATALOG

for your CUSTOM-ENGINEERED CERAMIC-METAL DEVICES:

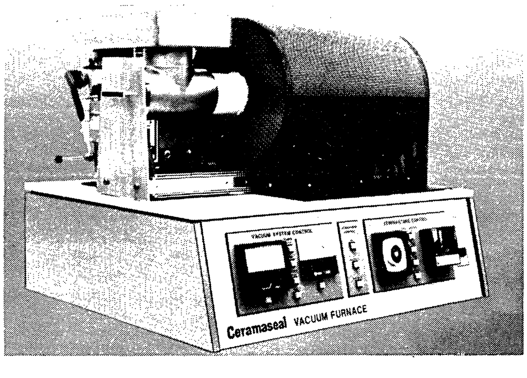


COME TO EXPERIENCE: When a standard product won't solve your problem, turn to Ceramaseal for a special unit. We've engineered and manufactured custom devices since 1951 for a wide range of markets.

VERSATILITY: Using both the refractory- and active-metal processes, we can offer many metal-ceramic combinations.

PERFORMANCE: Designs withstand temperatures from −268°C to +1000°, operating pressures from $< 1 \times 10^{-10}$ torr to $> 30{,}000$ psig, voltages to 180 KV.

STANDARD UNITS, TOO: We have hundreds of designs available from stock stock for immediate shipment.



VACUUM FURNACES

for Research & Industry

- Table top & floor models
- Vacuum to < 10^{-6} torr & temp. range to 1100°C
- Ceramic retort with all metal seal to vacuum flange
- High-speed baffled S.S. diffusion pump & manifold
- Digital display of furnace charge temp.
- Applications: brazing, heat treating, sintering, crystal annealing, degassing

YOU PROBABLY WON'T SEE WHAT YOU NEED ON THIS PAGE

We're just showing some of Connector Corp.'s capabilities

Our 2nd Quarter Century: Providing design solutions to help packaging engineers achieve max. unit performance.
5 Plants: Complete in-house mfg./QC from basic raw materials to finished product.
Highly Efficient Cost-Saving Mfg. Techniques: Already tooled on many thousands of items, one of which can be adapted for you or a new one made to your individual requirement.
Production: High volume high speed production to close tolerances.
Market Reputation: A typical long time customer rates C/C: 1) Tops in quality. 2) Excellent in service and performance. 3) Equitable in price. 4) Overall rating 98.5%. Other customers give C/C similar ratings.
Innovative designs . . . engineering service . . . production quality have built C/C's reputation.
Talk to our engineers or our closest representative. They'll work with your engineers to design, develop and/or make the product or innovation you need to meet your changing packaging assembly requirements.

SPECIALISTS IN INNOVATIVE AMERICAN MADE CONNECTIONS

SAVE TOOLING COSTS

We have product tooling no one else may have, including tools for many hard-to-find items. By never obsoleting tooling, we've accumulated a huge product tool library, increasing as new products are added. It's a great cost-saving combination of always-new applications for our basic lines plus new products too.

PRODUCTS: Too many to list. Includes numerous types of Multi-Purpose Phono Connectors (male & female, molded & laminated) • Audio Types of Connectors • Tube Sockets including transmitter & high voltage • CRT Socket Assemblies with & without integral spark gaps • Nuvistor Sockets • IC Sockets • Fuse Holders • Battery Hardware: sockets, plugs, snaps, pads, connectors & wire assemblies • Precision Metal Stampings • Transistor Sockets for T03, T05, T06, T066, etc. • Spark Gap Assemblies • Automotive Radio Antenna Connectors • Customized Tube Bases • Laminated Plugs • Receptacles • Molded Plugs • Crystal Sockets • UHF TV Antennae, etc., etc. for many, many military, industrial & commercial market applications. A representative sampling is shown.

COMPLETE-IN-HOUSE MFG/QC in 5 plants from basic raw materials to finished product.
OUR 2nd QUARTER CENTURY helping packaging engineers achieve max. unit performance.
Put our COST-SAVING MFG. TECHNIQUES to work for you. Contact our Engineering Dept. for help in solving your current connections problems.

"We Build Confidence!"

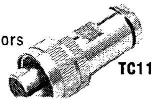
T.M.W TAJIMI CONNECTORS by DSA

RF COAXIAL CONNECTORS

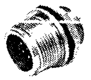
WATER PROOF CIRCULAR CONNECTORS

TC1108 SERIES

TC 1108 series are miniature water-proof connectors which can be used up to 30m depth.



TC1108-21A10-7M



TC1108-23A10-7M

Specifications
- Water-proof pressure: Resistance water pressure: 3 atu.
- Temperature range: −25°C to +85°C
- Insulation resistance: DC500V 1000MΩ Min
- Contact resistance: DC1A Max 5mΩ Max

Contact	Shell Size	Diameter	Length	Cable O.D.
MALE				
2 to 7	10	21	52	5 thru 10.0
8 to 37	16 to 26	27 to 40	55 to 74.5	11.0 to 16.3
FEMALE

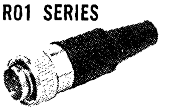
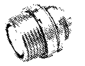
8 to 37	16 to 26	M24P-1	56 to 65.5	—

PW SERIES are compact and perfectly waterproof connectors for use with coaxial cables. They are used in radio control buoy for fishing in the ocean. They can be used with full confidence in the most hostile climates.

R01 SERIES



R01-01P9-8M



R01-02R9-8F

Circular multipin connector, outer diameter of 16mm. Number of contacts 6 and 8.

R-14 SERIES

External shells made of stainless steel waterproof in depths of 100m.

R04 SERIES

Super-miniature waterproof in depths of 20m

R04-P5M

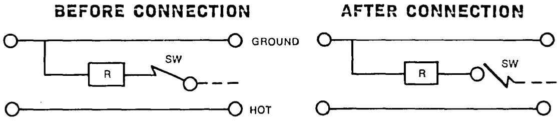
R04-R5F

No. of Contacts	Diameter	Length	Cable O.D.
MALE			
2 to 12	12 to 20	38 to 42	4.80 to 8.50
FEMALE			
2 to 12	M10.5P=0.75	9.0	M9.0P=0.5

BNC SERIES/MIL-C-39012

Termination Receptacle

Built in resistor eliminates need for external terminator. Internal resistor can be used in or out of circuit.



BNC312-TBR	Bulkhead Receptacle
BNC313-TBR	Isolated Panel mounting
BNC314-TR	Panel Receptacle
BNC315-TR	PCB mounting

BNC223-R

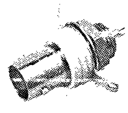
Isolated Panel Mounting Receptacle

Isolated receptacle is insured complete isolation between outer and center conductor.

This receptacle can be used in applications with ground line; must be isolated chassis ground. Metal thread insures a firm connection.

SPECIFICATIONS

- **Insulation resistance:** DC500V 5000MΩ min
- **Withstand voltage:** AC1500V
- **Contact resistance:** 3mΩ max
- **Max panel thickness:** 3mm

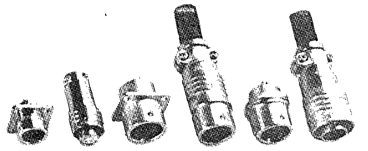


BNC284-BR

CIRCULAR CONNECTORS

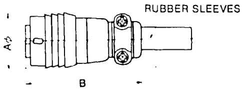
PRC03, 04 AND 05 SERIES

are our original push-pull action connection. Miniature quick connect-disconnect high quality multi conductor connector.



SPECIFICATIONS

- **Number of contacts:** 2 to 37
- **Voltage rating:** AC150V to AC600V(rms)
- **Current rating:** 2A to 10A
- **Insulation resistance:** DC500V 1000MΩ min
- **Contact resistance:** 5mΩ max at DC1A



Series	No. of Contacts	A	B	Max. Cable O.D.

	12	9.5	18.0	16.0	17.0	22.5	2.8

R03 AND R05 SERIES

connectors are designed for subminiature application. High quality small size multi conductor connector and two types are available, thread and bayonet.

SPECIFICATIONS

- **Number of contacts:** 2 to 12
- **Insulation resistance:** DC500V 1000MΩ min
- **Contact resistance:** 5MΩ max at DC1A
- **Voltage rating:** AC15CV to AC300V(rms)
- **Current rating:** 2A

DSA offers various connectors. For complete information on our wide range of products please contact:

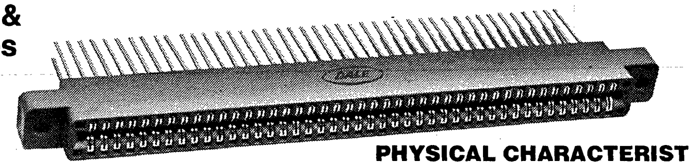
DSA-DAI-ICHI SHOJI OF AMERICA, INC. 150 Fifth Avenue, Suite 516, New York, NY 10011, (212) 691-9050.

DALE® EDGEBOARD CONNECTORS

[Numbers in brackets indicate millimeters]

SERIES EB4, DUAL READOUT—.100 C-C x .200 GRID [2.54 x 5.08]
SERIES EB6, DUAL READOUT—.125 C-C x .250 GRID [3.17 x 6.35]

Military, Industrial & Commercial Grades



FEATURES

- Designed to meet the requirements of MIL-C-21097/23 (EB4) and MIL-C-21097/24 (EB6).
- Great design latitude...
  4 body materials: *Diallyl phthalate, phenolic, glass-filled polyester, High-Temperature, glass-filled phenolic.*
  3 contact termination styles.
  19 body sizes.
  5 mounting styles.
- Selective gold plating.
- Will accept printed circuit board thickness from .054 [1.37] to .071 [1.80].
- Polarization between contact positions permits polarizing without loss of contact position.
- Bifurcated Cantilever Beam.
- Right angle styles available—see below.

PHYSICAL CHARACTERISTICS

Number of Contacts (EB4): 10, 12, 15, 18, 20, 22, 25, 28, 30, 31, 35, 36, 40, 43, 44, 48, 49, 50 and 60 per side.

Number of Contacts (EB6): 6, 10, 14, 15, 18, 22, 24, 25, 28, 30, 31, 32, 35, 36, 40, 43, 44, 49 and 50 per side.

Contact Terminal Variation:
Type "C"—Dip Solder, .025 [0.63] square terminals, .175 [4.44] nominal terminal length below standoffs.
Type "D"—Dip Solder, .025 [0.63] square terminals, .115 [2.92] nominal terminal length below standoffs.
Type "K"—Wire Wrap®, .025 (0.63) square terminals, .570 (14.47) nominal terminal length below standoffs.

Contact Spacing: EB4 = .100 [2.54] center to center.
EB6 = .125 [3.17] center to center.

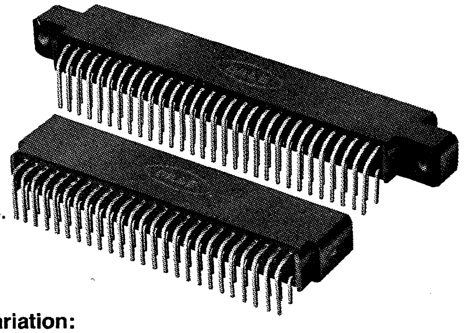
Contact Terminal Row Spacing: EB4 = .200 [5.08] nominal.
EB6 = .250 [6.35] nominal.

Card Slot Depth: .300 [7.62].

Connector Polarization: Between contact polarization key(s) are located to the right of the contact position(s) designated.

DALE® RIGHT ANGLE EDGEBOARD CONNECTORS

SERIES EB4, DUAL READOUT, RIGHT ANGLE—.100 C-C x .150 GRID [2.54 x 3.81] or .100 C-C x .200 GRID [2.54 x 5.08]
SERIES EB6 DUAL READOUT, RIGHT ANGLE—.125 C-C x .150 GRID [3.18 x 3.81] or .125 C-C x .200 GRID [3.18 x 5.08]



FEATURES

- Identical to Series EB4 and EB6 (shown above) but utilize right angle contacts for special mounting situations and are available in 4 mounting styles.
- Military, industrial and commercial grades in a wide choice of body sizes and materials. Termination and mounting styles.

PHYSICAL CHARACTERISTICS

Contact Type: Bifurcated Cantilever Beam.

Number of Contacts (EB4): 10, 12, 15, 18, 20, 22, 25, 28, 30, 31, 35, 36, 40, 43, 44, 48, 49, 50 and 60 per side.

Number of Contacts (EB6): 6, 10, 14, 15, 18, 22, 24, 25, 28, 30, 31, 32, 35, 36, 40, 43, 44, 49 and 50 per side.

Contact Spacing: EB4 = .100 [2.54] center to center
EB6 = .125 [3.17] center to center.

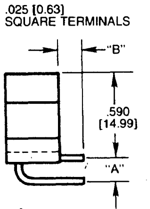
Contact Terminal Row Spacing: .200 [5.08] nominal and .150 [3.81] nominal.

Card Thickness: .054 [1.37] to .071 [1.80].

Card Slot Depth: .300 [7.62].

Connector Polarization: Between contact polarization key(s) are located to the right of the contact position(s) designated.

Contact Terminal Variation:
Type "1R"—Dip Solder, .025 [0.63] square terminals, .120 [3.05] nominal terminal length x .150 [3.81] nominal terminal row spacing.
Type "2R"—Dip Solder, .025 [0.63] square terminals, .120 [3.05] nominal terminal length x .200 [5.08] nominal terminal row spacing.
Type "3R"—Dip Solder, .025 [0.63] square terminals, .180 [4.57] nominal terminal length x .150 [3.81] nominal terminal row spacing.
Type "4R"—Dip Solder, .025 [0.63] square terminals, .180 [4.57] nominal terminal length x .200 [5.08] nominal terminal row spacing.



TYPE	"A"	"B"
1R	.150 [3.81]	.120 [3.05]
2R	.200 [5.08]	.120 [3.05]
3R	.150 [3.81]	.180 [4.57]
4R	.200 [5.08]	.180 [4.57]

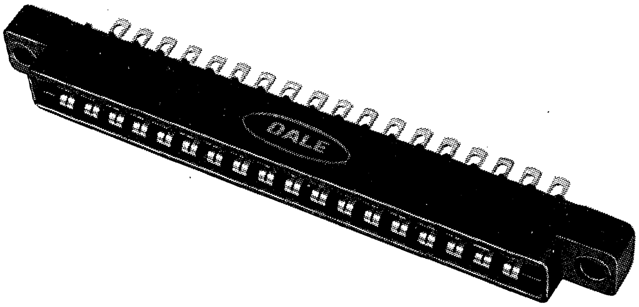
SERIES EB 7S, SINGLE READOUT—.156 [3.96] C-C SPACING
SERIES EB 7D, DUAL READOUT—.156 C-C x .140 GRID [3.96 x 3.56]



FEATURES

- Bifurcated bellows contacts assure positive contact under adverse conditions such as vibration or P.C. board irregularities.
- Will accept printed circuit board thickness from .054 [1.37] to .071 [1.80].
- Polarization between contact positions permits polarizing without loss of contact position.
- Selective gold plating.
- Polarizing key is reinforced nylon, may be inserted by hand, requires no adhesive.
- Protected entry, provided by recessed leading edge of contact, permits the card slot to straighten and align the board before electrical contact is made. Prevents damage to contacts.
- Recognized under the Component Program of Underwriters Laboratories Inc. Listed under File E65524, Project 77CH3889.

PHYSICAL CHARACTERISTICS

Contact Type: Bifurcated bellows.
Number of Contacts: **EB 7S** = 6, 10, 12, 15, 18 and 22 per side.
EB 7D = 6, 10, 12, 15, 18, 22, 36 and 43 per side.
Card Thickness: .054 [1.37] to .071 [1.80].
Card Slot Depth: Single Readout = .300″ [7.62].
Dual Readout = .260″ [6.60].
Contact Spacing: .156 [3.96] center to center.

ELECTRICAL CHARACTERISTICS

	EB4*	EB6*	EB7S	EB7D
Current Ratings (Amps)	3	3	5	5
Test Voltage Between Contacts (VRMS)				
At Sea Level	650	1500	1800	1800
At 70,000 feet [21,336 meters]	275	325	450	450
Operating Temperature (°C)	−65 to +150		−55 to +150	
Insulation Resistance	5000 megohms minimum at 500 VDC potential.			
Contact Resistance	30 millivolts maximum at rated current with gold plating			
Humidity	96 hours at 90% relative humidity at 40°C dried at room temperature for 3 hours minimum, insulation resistance was greater than 5000 megohms.			
Durability	After 500 cycles of insertion and withdrawal of a .070 [1.78] thick steel test board, contact resistance less than .030V at 3 amps for EB4, EB6, and 5 amps on EB7S and EB7D. Contacts were gold plated and individual contact pair separation force when measured with a .054 [1.37] thick steel test blade was greater than 1/2 oz.			
Shock	Three 50G shocks in each of 3 mutually perpendicular planes with no loss of continuity.			
Vibration	2 hours in each of 3 mutually perpendicular planes, frequency sweep 10 to 55 cps at .06 double amplitude with no loss of continuity.			

*Includes right angle styles

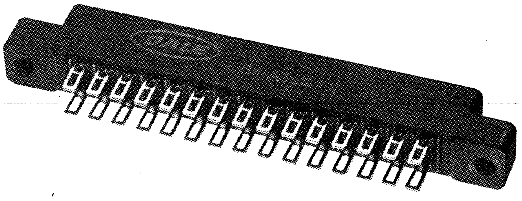
DALE® EDGEBOARD CONNECTORS

[Numbers in brackets indicate millimeters]

SERIES EB8, DUAL READOUT—.156 C-C x .200 GRID [3.96 x 5.08]

Military, Industrial & Commercial Grades



FEATURES

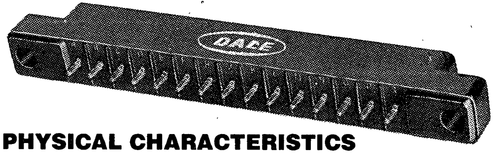
- Designed to meet MIL-C-21097C.
- Great design latitude…
  4 body materials: *Diallyl phthalate, phenolic, glass-filled polyester, High-Temperature, glass-filled phenolic.*
  6 contact termination styles.
  8 body sizes.
  7 mounting styles.
- Selective gold plating.
- Bifurcated bellows contacts provide 2 flexing contact surfaces.
- Will accept printed circuit board thickness from .054 [1.37] to .071 [1.80].
- Polarization between contact positions in all sizes.

PHYSICAL CHARACTERISTICS

Contact Type: Bifurcated bellows.
Number of Contacts: 6, 10, 12, 15, 18, 22, 24 and 25 per side.
Contact Spacing: .156 [3.96] center to center.
Card Thickness: .054 [1.37] to .071 [1.80].
Card Slot Depth: .330 [8.38].

SERIES EBT 156, SINGLE READOUT—.156[3.96] C-C SPACING

Dip Solder, Eyelet and Wire Wrap™ Termination



FEATURES

- Modified tuning fork contacts reduce wear on printed circuit board contacts without sacrificing contact pressure and wiping action.
- Will accept printed circuit board thickness from .054 [1.37] to .070 [1.78].
- Polarization on or between contacts position permits polarizing without loss of contact position.
- Polarizing key is reinforced nylon, may be inserted by hand, requires no adhesive.
- Protected entry permits the card slot to straighten and align the board before electrical contact is made. Prevents damage to contacts.
- Optional terminal configurations, including eyelet (Type A), dip-solder (Type B, C, D and R) wire wrap (Type E and F).
- Meets or exceeds MIL-C-21097/6.
- Connectors with Type A, B, C, D or R contacts are recognized under the Component Program of Underwriters Laboratories Inc. Listed under File E65524, Project 77CH3889.

PHYSICAL CHARACTERISTICS

Number of Contacts: 6, 10, 12, 15, 18 and 22.
Contact Spacing: .156 [3.96]
Card Thickness: .054 [1.37] to .070 [1.78].
Card Slot Depth: .330 [8.38].

COMPONENT MATERIAL

Body: Glass-filled phenolic per MIL-M-14, Type MFH, black, flame retardant (UL 94V-0).
Contacts: Style(s) A, B, C, D, E and F = Alloy 688. Style "R" (Right Angle) = CA725.
Finish: -1 = Electro Tin Plate
-2 = Gold Flash
Polarizing Key: Glass-filled nylon.
Optional Threaded Mounting Insert: Nickel plated brass. (Type Y)
Optional Floating Mounting Bushing: Cadmium plated brass. (Type Z)

ELECTRICAL CHARACTERISTICS

	EB8	EBT 156
Current Ratings (Amps)	5	5
Test Voltage Between Contacts (VRMS) At Sea Level At 70,000 feet [21,336 meters]	 1800 450	 1800 450
Operating Temperature (°C)	−55 to +150	—
Insulation Resistance	5000 megohms minimum at 500 VDC potential.	
Contact Resistance	30 millivolts maximum at rated current with gold plating (gold flash, EBT 156)	
Humidity	96 hours at 90% relative humidity at 40°C dried at room temperature for 3 hours minimum, insulation resistance was greater than 5000 megohms.	
Durability	After 500 cycles of insertion and withdrawal of a .070 [1.78] thick steel test board, contact resistance less than .030V at 3 amps for EB8. Contacts were gold plated, and individual contact pair separation force when measured with a .054 [1.37] thick steel test blade was greater than 1/2 oz.	
Shock	Three 50G shocks in each of 3 mutually perpendicular planes with no loss of continuity.	
Vibration	2 hours in each of 3 mutually perpendicular planes, frequency sweep 10 to 55 cps at .06 double amplitude with no loss of continuity.

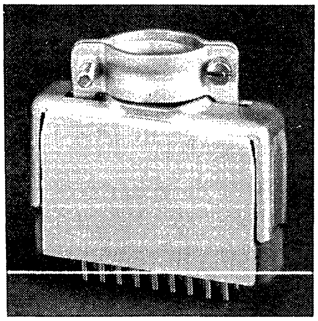
DALE® RACK AND PANEL CONNECTOR

MICROMINIATURE RECTANGULAR DALE SERIES MM22 and MM24

with Optional Hoods



FEATURES

- Qualified to MIL-C-28748/7 and /8
- Solder cup contacts
- Dip solder contacts
- Fixed and turnable screwlocks
- Optional closed entry socket contacts

PHYSICAL CHARACTERISTICS

No. of Contacts: 5, 7, 9, 11, 14, 18, 20, 26, 29, 34, 44 or 50*

Contact Gauge:
MM22 Series = 22 AWG
MM24 Series = 24 AWG

Minimum Creepage Path between Contacts: .08 [2.03]

Minimum Air Space between Contacts: .05 [1.27]

ELECTRICAL CHARACTERISTICS

Current Rating: MM22 Series = 5 amps
MM24 Series = 3 amps

Breakdown Voltage: At Sea Level: 2000 VRMS
At 70,000 feet: 500 VRMS

COMPONENT MATERIAL

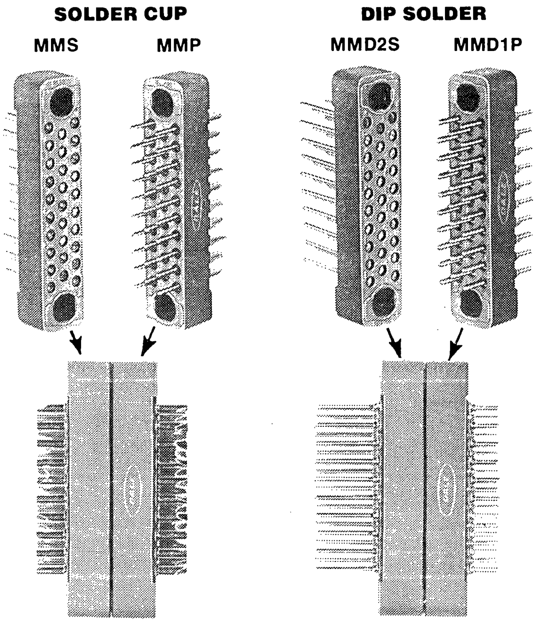
Contact Pin: Phosphor Bronze

Contact Socket: Phosphor Bronze (Beryllium copper available on request.)

Contact Plating: Gold

Screwlocks: Stainless steel, passivated

*Includes special 5-row contact arrangement.



Guides: Brass, gold plated or stainless steel, passivated

Standard Body: Glass-filled diallyl phthalate per MIL-M-14, Type GDI-30F, green.

[Numbers in brackets indicate millimeters]

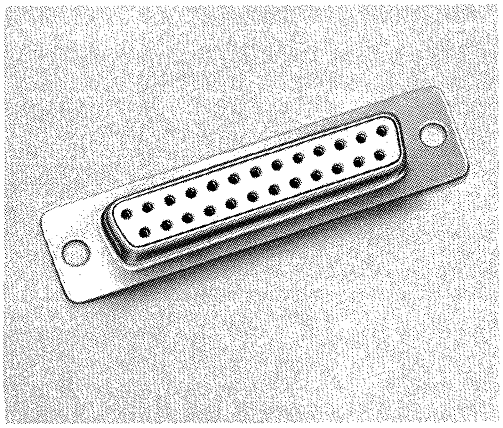
EBY Delivers on selection, quality, delivery, price and performance.

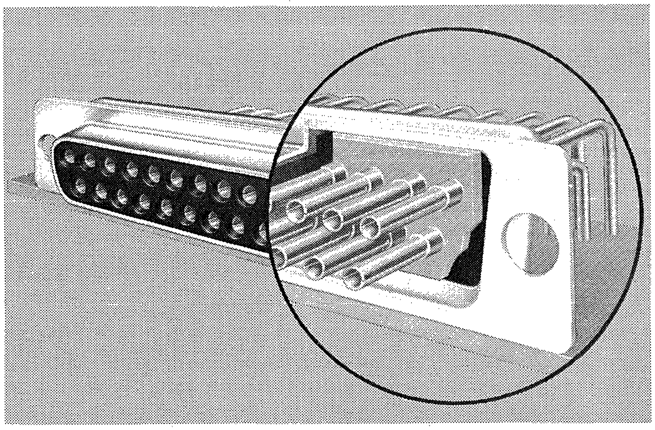
Now that's a "full-line" connector company.



Miser D Connectors

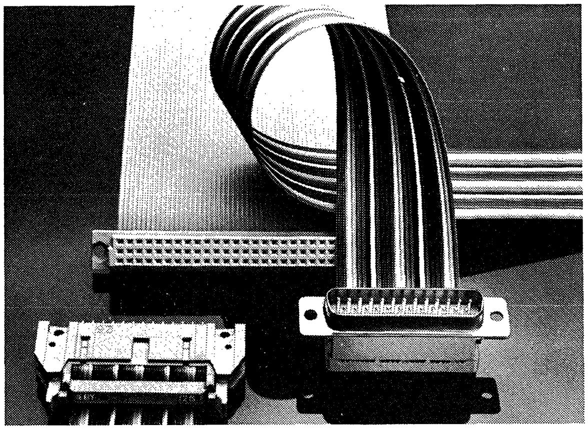
New Product! Low cost D-Sub connectors

Available in Solder-cup contacts. Full range of contact configuration including 9, 15, 25, 37, and 50. Stamped and formed contacts.



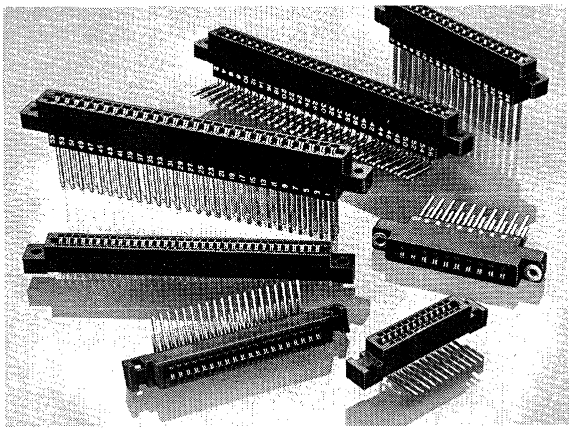
Filtered D Connectors

EBY Filtered D-Subminiature Connectors enhance a systems electromagnetic compatibility (EMC), with the Federal Communications Commissions (FCC) emissions levels.



IDC Flat Cable Connectors

Shrouded and Unshrouded Headers, Sockets, PCB Transition Sockets, D-Subminiatures, DIN's and DIP's. Full-gold and selective platings. Conform to MIL-C-83503.



Card Edge Printed Circuit Connectors

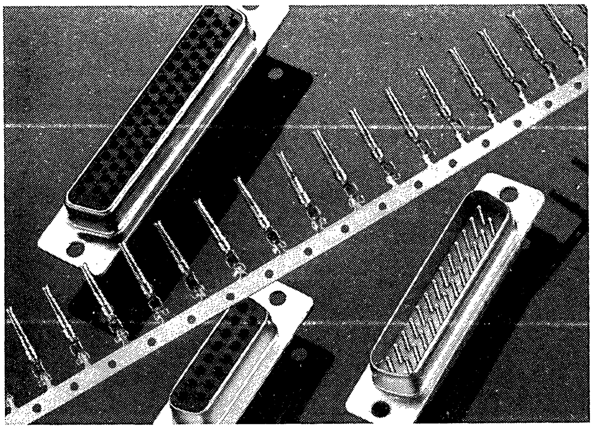
Available in .100, .125, .150 and .156 centers. Straight and right angle tails. Choice of full-gold or selective plating. Various insulating materials available.

EBY is more than a manufacturer of connectors. EBY is a full service company geared to filling your connector needs—with quality, performance, delivery and selection. *Plus* a competitive price.

Make EBY deliver for you. Call the EBY HOTLINE. 215/969-4200 or write EBY Company, a Pullman Company, 2751 Southampton Road, Philadelphia, Pa. 19154

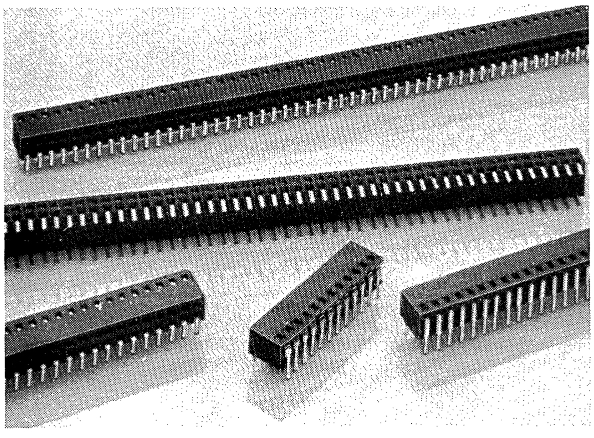
eby DELIVERS™

EBY Company, A Pullman Company, 2751 Southampton Road, Philadelphia, PA 19154, 215/969-4200, TWX: 710-670-0452

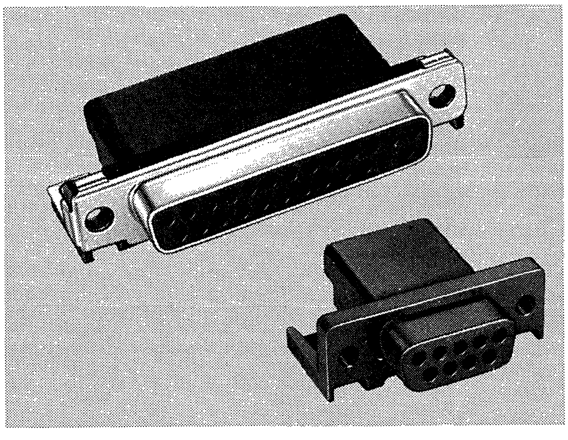


D-Subminiature Connectors
Crimp insertable and original "D" with 9, 15, 25, 37 and 50 pins. Available in crimp, solder cup, printed circuit (straight and right angles) and solderless wrap tails.

Transistor Sockets And Binding Posts
Transistor sockets for TO-3 and TO-66 outlines up to, and including, 50 amps. Binding posts for commercial and military applications that meet MIL-P-55149; waterproof and panel-mounted.



Box Connectors
Full range in 2 thru 65 dual positions with .100 or .150 centers. Single row version with vertical and horizontal mounting on .100 centers in 2 thru 36 positions. Connectors can be plated with full gold, selective gold or tin.



New Plastic D-Subminiature Connectors
Directly interchangeable with all plastic D's. Pin-and-socket, right-angle configuration. Available with metal front. Substantially lower in cost versus standard D-Subminiature connectors.

EMC electromagnetic compatibility
EMI electromagnetic interference
EMP electromagnetic pulse
EPROM electrically programmable ROM
ESR equivalent series resistance

F
FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G
GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H
HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I
IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J
JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K
kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L
LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M
MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
μF microforad
MHz megahertz
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOSIGT metal-oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N
NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM nuclear instrumentation module
NOR not OR
NTC negative temperature coefficient

O
OCR optical character reader
OEM original equipment manufacturer
OR a logical operator

P
PC printed circuit
PCB printed circuit board
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLL phased lock loop
PPI plan position indicator
PROM programmable read only memory
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q
QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R
RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S
SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon controlled switch
SDA source & detector assemblies
SIDAC bidirectional voltage-triggered switch
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T
TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U
UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V
VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VME virtual machine environment
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W
WPS word processing software

Y
YIG yttrium iron garnet

Z
ZIF zero insertion force

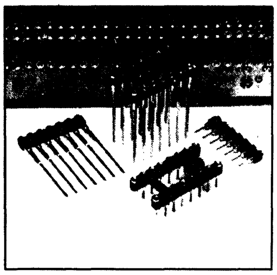
Press-Pac™ card-edge connector

Press-Pac is designed to let you assemble your own backpanels with no special tooling required. Insert one or 100 Press-Pacs using a simple flat plate press. Our compliant-pin connector system is completely compatible and interchangeable with whatever connectors you're using now, regardless of size, spacing or configuration, from prototype through production. ELFAB offers both select-loading and select-plating of Press-Pac contacts, to even further reduce the overall connector cost. Additionally, Press-Pac contacts are individually replaceable in the field, using repair kits supplied by ELFAB.

Specifications

Insulator Housing: ZYTEL FR-50 nylon resins
Contacts: Phosphor-Bronze per QQ-B-750, Composition A, full hard plated with 50-150 μ inch nickel and gold flash with 30 μ inch gold in contact-engagement
Current Rating: 5 AMPS maximum
Contact Resistance: 6 milliohms @ 5 AMPS
Insertion Force: 8 oz. maximum per contact pair
Withdrawal Force: 1.0 oz. minimum per contact pair
Push-out Force: 8 lbs. minimum to remove contact from board
Insulator Retention: 1.0 lb. per contact pair
Normal Force: 3 oz. minimum per contact
Durability: 250 cycles minimum



Soc-Pac™
press-fit IC sockets

Soc-Pac SIP and DIP IC sockets permit significant increases in circuit density, improve ventilation of ICs, and allow reduction or elimination of external wiring. Plus lower contact resistance due to greater area contact.

- Etched circuitry passes between pins, eliminating one or more Wire-Wraps, reducing overall height of the board.
- Separate contacts, socket assemblies, and socket boards built to your specifications are available in solderable and press-fit configurations.
- Press-fit sockets and contacts available with up to three-wrap tails, for .062", .125" and .155" boards—including multilayer, Multi-Pac® and Pwr-Pac®.
- Oriented contact springs are beryllium-copper alloy 25, with 30 μin gold over nickel. Standard pin is nickel-plated overall, with optional selective-area platings of gold and tin available.

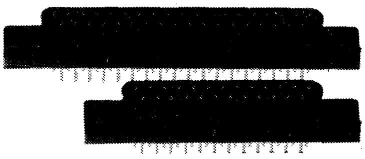
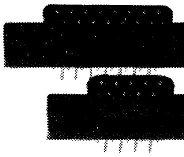
Specifications

Insulator body: Black, glass-filled polyester, UL94VO. 125°C operating temperature.
Contact: Half-hard brass with 50-150 μin nickel plate. Selective gold or tin plating
Contact spring: Beryllium-copper with 30 μin gold over nickel.
Electrical: Current rating 3 amperes. Contact resistance 10 mΩ maximum.





Press-Fit D-sub connectors

Now ELFAB offers all-plastic D-subminiature connectors—which are completely interchangeable with standard metal D-Subs—as a vital cost alternative to metal.

Our select-plating techniques, as well as our automated assembly procedures, make Elfab Plastic D-Subs—available in 9-, 15-, 25- and 37-pin configurations—your smartest cost decision.

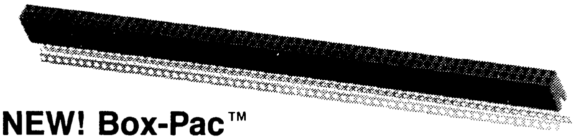
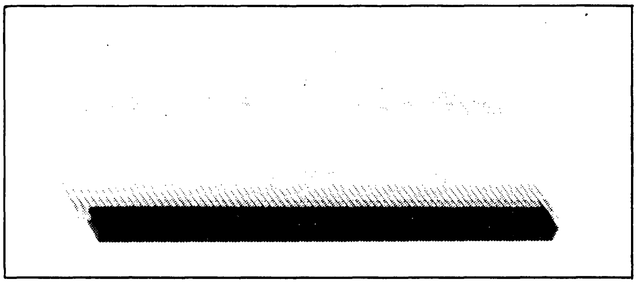
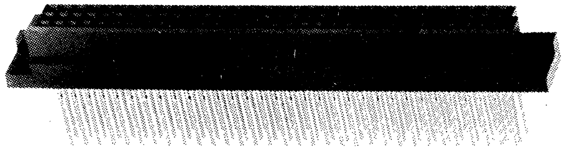
NEW INTERCONNECT SYSTEMS FROM ELFAB



NEW! Box-Pac™ Surface Mount box connector

Now ELFAB brings you true surface mount interconnection with two-row and four-row Box-Pac box connectors. Box-Pac reflow solders onto your PC boards without through-holes. Box-Pac is mounted co-planar to the board. Contact ELFAB for complete details regarding application, specifications and pricing.



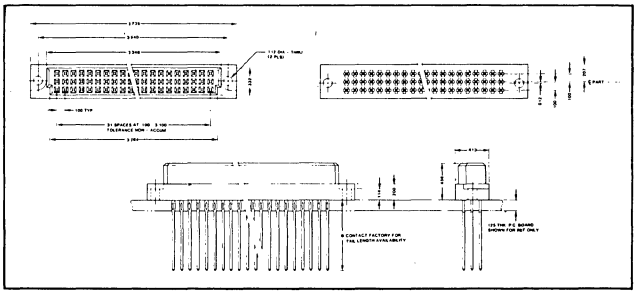


Press-Pac™ Standard Din (Female)

ELFAB's Press-Pac™ DIN connector is designed specifically for the customer needing a fast, cost-effective means of assembling backpanels utilizing DIN connectors. It is completely compatible and interchangeable with any DIN currently in use.

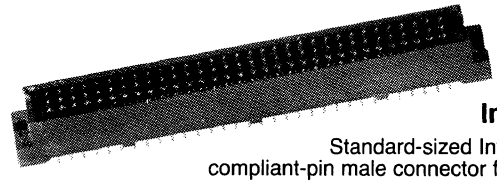
Press-Pac DIN can be inserted using a flat-plate press on the top of the connector housing in one simple motion, with no special tooling required. Thus, great numbers of Press-Pac DINs may be inserted into boards simultaneously, using larger-capacity presses.

Additionally, individual Press-Pac DIN contacts may be replaced in the field, utilizing repair kits available from ELFAB.



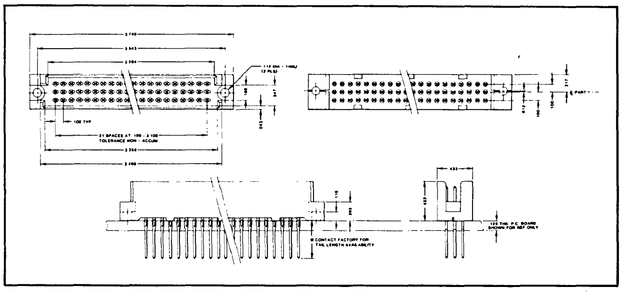
Specifications

Insulator Housing: Glass-filled ZYTEL FR-50 Nylon
Contacts: Phosphor-Bronze per QQ-B-750, Composition A, full hard plated with 50-150 μ inch nickel and gold flash with 30 μ inch gold in contact-engagement area.
Current Rating: 5 AMPS maximum
Contact Resistance: 6 milliohms maximum
Insertion Force: 2 oz. maximum
Withdrawal Force: 1 oz. minimum
Push-out Force: 8 lbs. minimum
Insulator Retention: .5 lb. per contact minimum
Normal Force: 3 oz. minimum
Durability: 500 cycles minimum



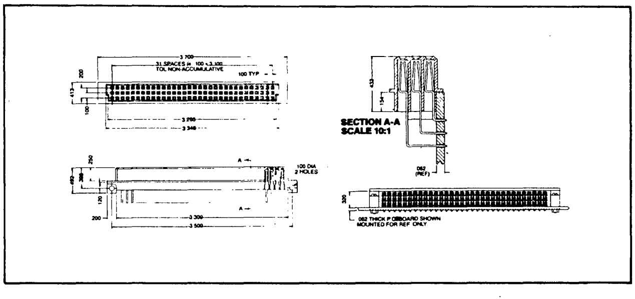
Inverse DIN System

Standard-sized Inverse DIN system offers ELFAB's press-fit compliant-pin male connector for backplace mounting, and right- angle female connector for reflow soldering to the daughter card. Contact ELFAB for detailed standard selective-plating options.



Specifications

Insulator Housing: Glass-filled Celanex® thermoplastic polyester
Contacts: Phosphor-Bronze per QQ-B-750, Composition A, Full hard plated with 50-150 μ inch nickel and gold flash with 30 μ inch gold in contact-engagement area.
Current Rating: 5 AMPS maximum
Contact Resistance: 6 milliohms maximum
Push-out Force: 8 lb. minimum
Insulator Retention: .5 lb. per contact minimum
Normal Force: 3 oz. minimum
Durability: 500 cycles minimum



Specifications

Insulator Housing: Glass-filled Celanex® thermoplastic polyester
Contacts: Phosphor-Bronze per QQ-B-750, Composition A, Full hard plated with 50-150 μ inch nickel and gold flash with 30 μ inch gold in contact-engagement area.
Current Rating: 5 AMPS maximum
Contact Resistance: 6 milliohms maximum
Insertion Force: 2 oz. maximum
Withdrawal Force: 1 oz. minimum
Push-out Force: N/A
Insulator Retention: 5 lb. per contact minimum
Normal Force: 3 oz. minimum
Durability: 500 cycles minimum

FISCHER
AMERICA, INC.

Precision, Swiss Made, Circular Connectors

Why Fischer?
Design, reliability and consistent quality make Fischer superior to similar type connectors.

These precision connectors are in use by Tektronix, Hewlett Packard, Texas Instruments, Phillips, Bosch and many more quality conscious companies around the world.

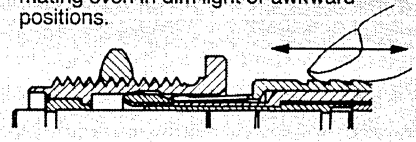
Prices are extremely competitive with manufacturers of similar types of connectors.

Delivery times are outstanding. Scheduled delivery on production orders can be arranged.

Applications
Audio, Video, Medical, R.F., Military, Aerospace, Industrial, Broadcast and Scientific.

Types
50 & 75 ohm coax, triax, waterproof, gas tight, vacuum, high radiation, thermocouple, P.C. mount, low resistance, light weight plastic, compound connectors, high temperature, high voltage, and hermetically sealed.

Automatic Locking
Superior locking/unlocking arrangement with metal half shells means easy mating even in dim light or awkward positions.



Materials
Brass, stainless steel, plastics, etc.

Insulation
PTFE (Teflon ©Dupont), ceramic, PBTP, High temperature plastics, etc.

Contacts
Machined, not stamped. Brass per QQ-B-626 or QQ-B-750 or Beryllium Bronze.

Plating
1 micron gold to MIL-G-45204C, type II over 5 microns nickel to QQ-N-290, class II.

Finish
Extremely rugged yet attractive connectors available with bright gold, satin or polished chrome finish. Other finishes may be specified. Protective rubber boots and plugs are also available.

Contact resistance
Less than 3 milliohms.

Radiation resistance
To 10^8 Rads, higher with ceramic insulators.

High temperatures
To 400°C with ceramic insulators.

Compatibility
Certain series intermate with Lemo and Kings connectors.

Other features
Space-saving design for dense panels. Simple one piece cable collet clamp for unshielded cables. Easily assembled 2 piece collet for shielded cable.

Custom & specials
When quantities warrant, connectors can be made to customer specifications. Often, existing parts can be modified at low cost for special applications.

Delivery
Small quantities are usually in factory stock. Production quantities: 4-8 weeks on standard items.

Other products
Delay lines from 0.5 nS to 64 nS.

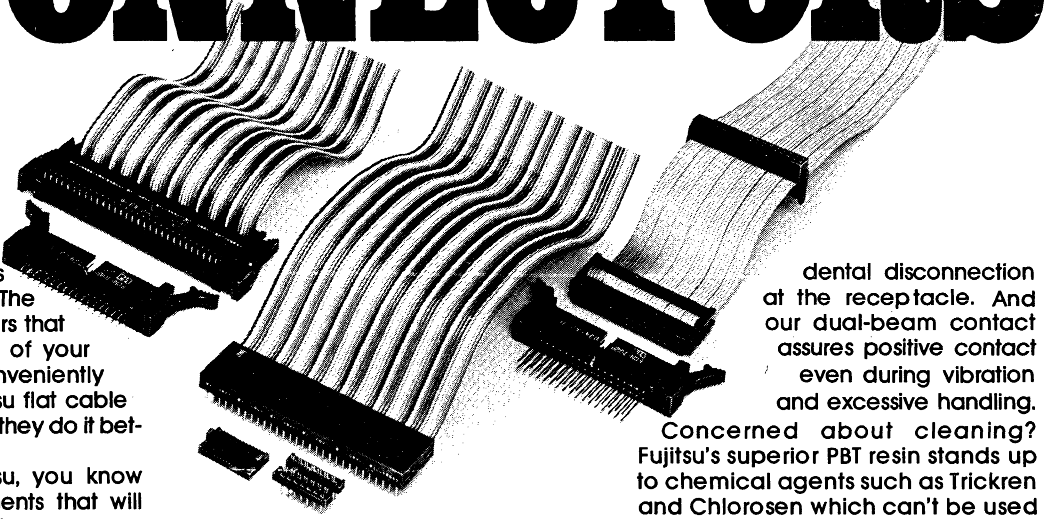
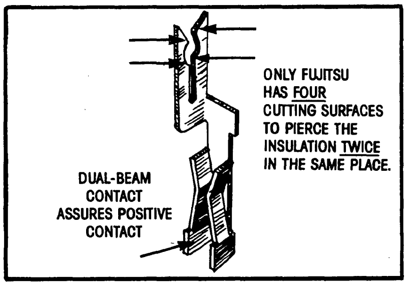
FUJITSU: FLAT CABLE CONNECTORS



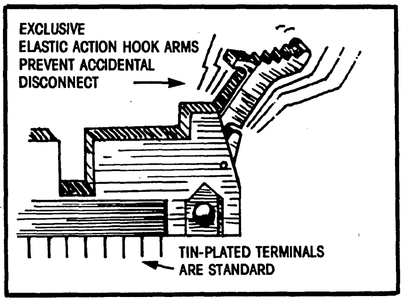
Flat cable connectors are easy enough to find. The trick is finding connectors that can handle every one of your needs consistently, conveniently and economically. Fujitsu flat cable connectors do it all. And they do it better than most.

When you buy Fujitsu, you know you're getting components that will always fit your usage because our connectors are compatible with 3M and other major brands. You won't be getting hit-or-miss construction, either. Thanks to Fujitsu's standardized automated manufacturing. Each piece must meet our rigid quality control standards before it is shipped.



ONLY FUJITSU HAS FOUR CUTTING SURFACES TO PIERCE THE INSULATION TWICE IN THE SAME PLACE.
DUAL-BEAM CONTACT ASSURES POSITIVE CONTACT

Assembling Fujitsu connectors is a snap, too, because of their simplified design. Like u-contacts that pierce the insulation twice at the same place to provide a gas-tight metal surface that is electrically reliable. And can withstand excessive pulling forces. And when you order Fujitsu flat cable connectors, you know you will always get tin-plated terminals that improve solderability and prevent gold contamination of the solder bath. Can your source say that?



EXCLUSIVE ELASTIC ACTION HOOK ARMS PREVENT ACCIDENTAL DISCONNECT
TIN-PLATED TERMINALS ARE STANDARD

A Fujitsu exclusive is the ingenious elastic hook arm that prevents accidental disconnection at the receptacle. And our dual-beam contact assures positive contact even during vibration and excessive handling.

Concerned about cleaning? Fujitsu's superior PBT resin stands up to chemical agents such as Trickren and Chlorosen which can't be used on cheaper, conventional thermoplastics.

Fujitsu considers it a point of pride, as well as good business, to cater to your company's needs before, during and after the sale is made. Our warehouse is stocked to supply your company with samples of our fine products. And Fujitsu can match *any* source's lead time for processing and shipping ... at a competitive price.

The FCN-700 series offers vertical, right angle and wire wrap plugs *and* open or closed covers for both end-cable and through-cable applications.

Considering all these points, you'd be smart to come to the source with the best connections. Where quality, reliability and service are part of our product. Fujitsu.

For more information on our superior components, call or write us today.

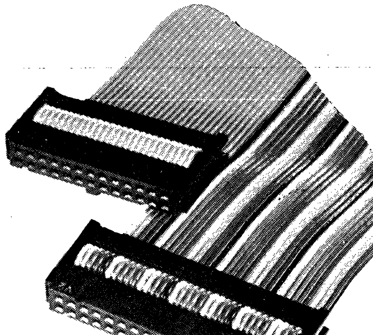
FCN-707J, 707B



- Mass-termination with flat cable
- 2.54mm grid contact spacing
- High-reliability original U-contact (double-action of IDC)
- Double-cantilever contact
- Bottom entry contact
- Many variations (10 to 60 pins, clip polarized socket/bump polarized socket, closed-end/through-end)
- UL recognized (E-71597)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 1A DC

Contact Resistance (when mated with HEADER): 20mΩ max. at 6V DC, 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Insertion Force (with HEADER): 3.5kg max. (10 pins) to 21kg max. (60 pins)

Withdrawal Force (with HEADER): 0.25kg min. (10 pins) to 2.5kg min. (60 pins)

Wire Size — Flat Cable For IDC: 1.27mm (0.050 inch) spacing AWG #28 (stranded) or #30 (solid)

Materials — Contacts: Phosphor-bronze (gold palladium over nickel)
Insulators: PBT and Polycarbonate (UL 94V-0)

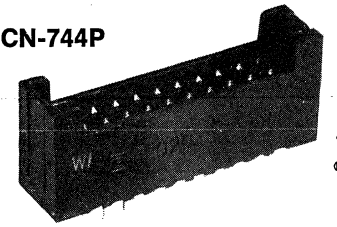
MINI HEADERS

FCN-744P



- Low-profile installation on PC board
- 2.54mm grid contact/terminal spacing
- □ 0.64mm contact
- □ 0.5mm terminals
- UL recognized (E71597)
- Solvent-resistant resin (PBT)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 3A DC

Contact Resistance (when mated with MINI SOCKET): 20mΩ max. at 6V DC, 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Thickness of PC Board (Standard): 1.6mm (1/16 inch)

Materials — Contacts: Phosphor-bronze (gold palladium over nickel plating)
Insulators: PBT (UL 94V-0)

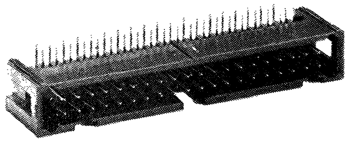
FCN-745Q



- Low-profile Right angle header
- Mating and keying compatibility with FCN-700, 740 Socket connectors
- Fully shrouded
- Selective plating (Gold palladium plating contact and palladium plating terminal)
- UL recognized materials (94V-0)
- Solvent resistant resin (PBT)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 3A DC

Contact Resistance: 20mΩ max. at 6V DC, 0.3A

Insulation Resistance: 1000mΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Contact Material: PBS

Insulation Material: PBT (UL 94V-0)

Plating — Contact: Gold palladium over nickel
Terminal: Palladium

Materials — Contacts: Phosphor-bronze (gold palladium over nickel plating)

FUJITSU

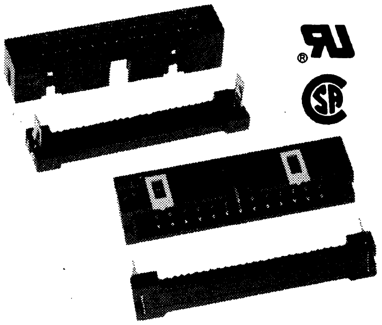
I.D.C. PLUG CONNECTORS

FCN-707P

Fujitsu I.D.C. plug connectors are added in Fujitsu flat-cable connectors and can be used as T-tap from a cable buss or splice connectors.



- Mating with socket
- Mass-termination with flat cable
- 2.54mm grid contact spacing
- □ 0.64mm contact
- Extensive applications. (T-tap, splice connector, I/O interface)
- Many variations (10 - 60 pins, with and without mounting ears)
- Strain relief tab to facilitate unmating
- UL recognized (E71597)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

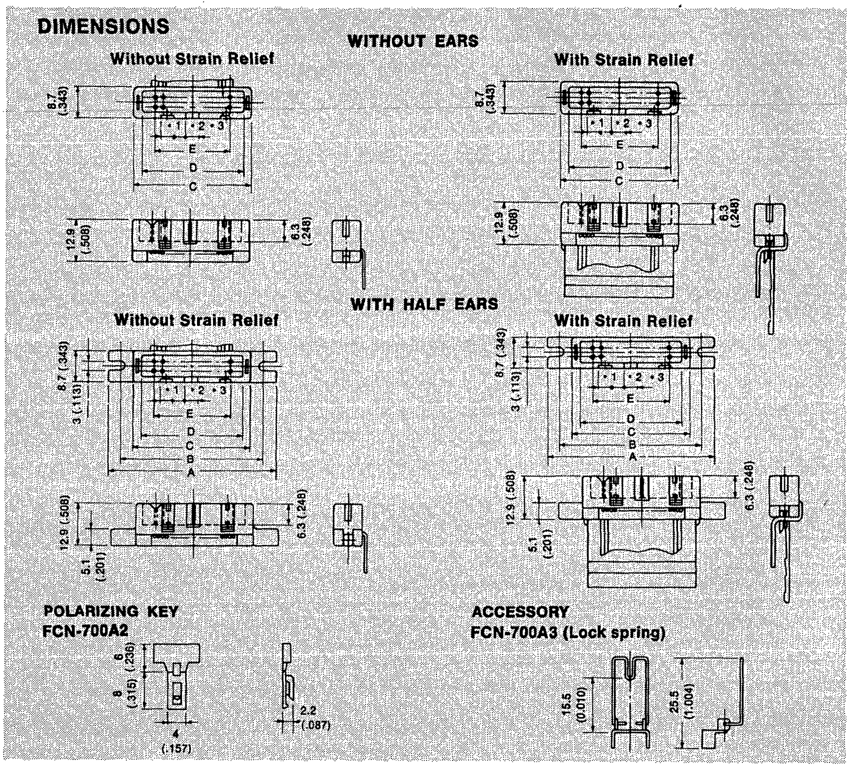
Current Rating: 1A DC

Contact Resistance (with SOCKET): 20mΩ max. at 6V DC, 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Wire Size (Flat cable for I.D.C.): 1.27mm (0.050 inch) spacing, AWG #28 (stranded) or #30 (solid)

Materials — Contact: Phosphor-bronze (gold palladium over nickel plating)
Insulators: PBT (UL 94V-0)



Unit: mm(inch)

FUJITSU

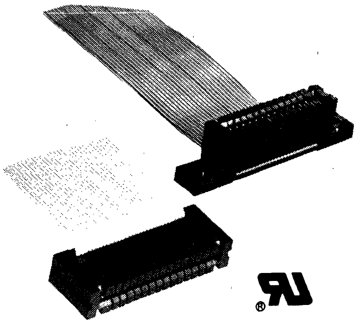
CARD EDGE CONNECTORS

FCN-767J



- 2.54mm contact spacing
- Mass-termination with flat cable
- High-reliability original U-contact (double-action of IDC)
- Bifurcated contact
- Many variations (10 to 60 pins, without ears/with half-ears/with full ears, without strain relief/with strain relief)
- UL recognized (E-71597)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 1A DC

Contact Resistance: 20mΩ max. at 6V DC, 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Wire Size — Flat Cable For IDC: 1.27mm (0.050 inch) spacing AWG #28 (stranded) or #30 (solid)

Thickness of PC Board (Standard): 1.6mm (1/16 inch)

Materials — Contacts: Phosphor-bronze (gold palladium over nickel plating)

Insulators: PBT (UL 94V-0)

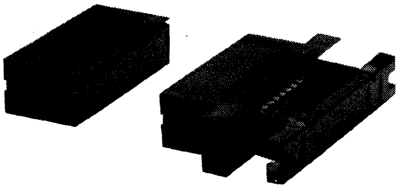
FLAT CABLE CONNECTORS

FCN-767E CARD-EDGE TYPE



Fujitsu Components has added a series of new card-edge connectors to its line of flat-cable connectors.

This new series (FCN-767E) is packaged and designed for easy use with automatic assembly equipment.

- Solvent-resistant resin
- UL recognized materials (94V-0)
- 2.54mm contact spacing
- Mass termination of flat cable
- Highly reliable, original U-contact (double-action IDC)

ENGINEERING DATA

Temperature range: −55°C ~ +105°C

Current rating: 1A DC

Contact resistance: 20 mΩ max. at 6V DC 0.3A

Insulation resistance: 1000 MΩ min. at 500V DC

Dielectric withstanding voltage: 500 V AC for 1 minute

Wire size—Flat cable for IDC: 1.27mm spacing AWG #28 (stranded) or #30 (solid)

Materials — Contact: Phosphor bronze (gold-palladium over nickel plating)
Insulator: PBT

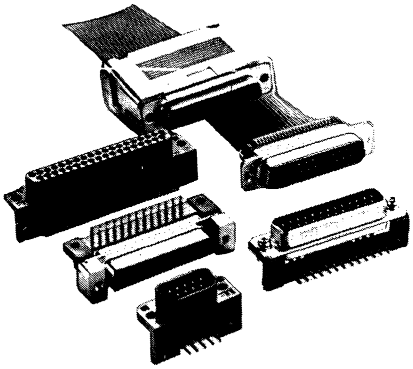
D TYPE CONNECTORS

FCN-775P/J



- Intermatable with other "D" type connectors
- High-reliability original U contact (double-action IDC)
- Mass-termination with 1.27mm flat cable
- Molded and shielded metal shell
- Selective plating (gold palladium contact and solder-plated terminal)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 3A DC (IDC type 1A DC)

Contact Resistance: 3mΩ max. at 6V DC 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Insertion Force: 10kg max. (25 pins)

Wire Size — Flat Cable for IDC: 1.27mm (0.050 inch) spacing AWG #28 (stranded) or #30 (solid)

Thickness of PC Board (Standard): 1.6mm (1/16 inch)

Materials — Contacts: Phosphor-bronze (gold palladium over nickel plating)
Insulators: PBT (94V-0)

FUJITSU

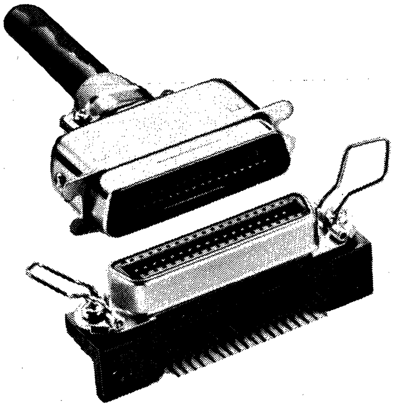
RIBBON TYPE CONNECTORS

FCN-781P, 785J



- Intermatable with other "RIBBON" type connectors
- Shielded metal shell
- Selective plating (gold palladium plated contact and solder-plated terminal)
- UL recognized material (94V-0)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 3A DC

Contact Resistance: 30mΩ max. at 6V DC 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Insertion Force: 13.6kg max. (36 pin)

Withdrawal Force: 0.725kg min. (36 pin)

Thickness of PC board (standard): 1.6mm (1/16 inch)

Materials — Contacts: Phosphor-bronze (gold palladium over nickel plating)

Insulation: Plug PPS
Socket PBT

DIMENSIONS Unit: mm (in.)

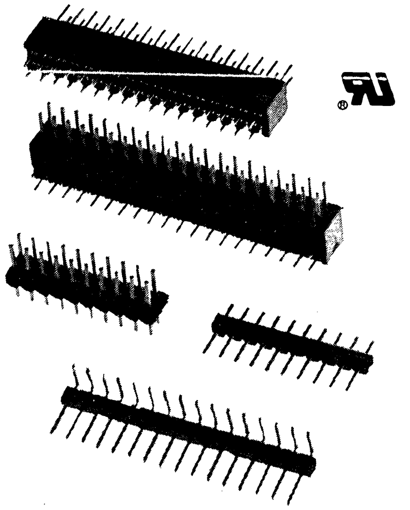
FUJITSU

BLOCK HEADERS

FCN-722P, 724P, 725P



- High-density installation on PC board
- 2.54mm grid contact/terminal spacing
- □ 0.64mm contact
- Many variations (10 to 60 pins, O/L/S/W type wire-wrap/straight/right-angle)
- UL recognized (E71597)
- Solvent-resistant resin (PBT)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 3A DC

Contact Resistance (when mated with RECEPTACLE): 20mΩ max. at 6V DC, 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Wire Size — Discrete Wire For Wire-Wrap: AWG #26 (ϕ0.41mm) to #30 (ϕ0.26mm)

Thickness of PC Board (Standard): 1.6mm (1/16 inch)

Materials — Contacts: Phosphor-bronze (gold palladium over nickel)
Terminal: U/L type — solder-over-nickel
Insulation: PBT (UL 94V-0)

FUJITSU

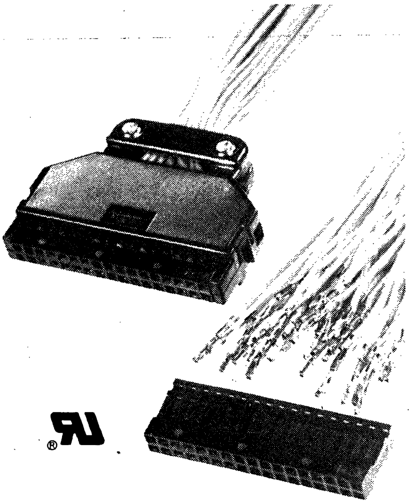
RECEPTACLE CONNECTORS

FCN-723J



- Crimp and removable contact for solid and twisted-pair cable
- 2.54mm grid contact spacing
- High-reliability box-protect (anti-deformation) contact
- Housing-lock mechanism (contact requires no locking-lance)
- Double-cantilever contact
- Bottom-entry contact
- Cover lockable with M hook HEADERS
- UL recognized (E71597)
- Many variations (3 to 72 pins, W/S type)

ENGINEERING DATA

Temperature Range: −55°C to +105°C

Current Rating: 3A DC

Contact Resistance (when mated with BLOCK HEADER): 20mΩ max. at 6V DC, 0.3A

Insulation Resistance: 1000MΩ min. at 500V DC

Dielectric Withstanding Voltage: 500V AC for 1 minute

Insertion Force (with BLOCK HEADER): 2.5kg max. (10 pins) to 15kg max (60 pins)

Withdrawal Force (with BLOCK HEADER): 0.3kg min. (10 pins to 1.8kg min (60 pins)

Wire Size — Solid wire for crimp: AWG #24 (0.24mm² [.000372 in²]) to #32 (0.032mm² [.0000495 in²])

Materials — Contacts: Phosphor-bronze (gold over nickel plating)
Insulators: PPS Nylon (UL 94V-2)

FUJITSU

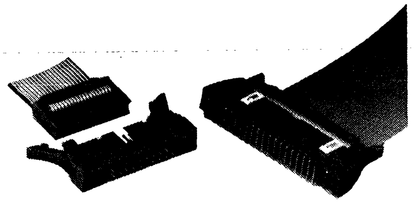
FLAT CABLE CONNECTORS

FCN-600



FCN-600 Series Connectors are added in FUJITSU Flat-Cable Connectors and provide mating compatibility with MIL-C-83503 Connectors.

- Mating and keying compatibility with MIL-C-83503, DIN 41651 and BT-224 Connectors.
- Fully shrouded header and Bump polarization socket.
- Selective plating (Gold, palladium over nickel plating in triple layers on contact and palladium plating on terminal).
- Many diversifications (10~64 pins, with/without strain relief, long/short hook).
- UL recognized materials (94V-0).
- Solvent-resistant resin (PBT).

ENGINEERING DATA

Temperature range: −55 to +105°C

Current rating: 1A DC

Contact resistance: 20 mΩ max at 6V DC 0.3A

Insulation resistance: 1000 MΩ min. 500V DC

Dielectric withstanding voltage: 500V AC for 1 minute

Contact material: PBS

Insulator material: PBT (UL 94V-0)

Plating: Contact: Gold, palladium over nickel (Triple layers). Terminal: Palladium.

Wire size—for flat cable IDC: 1.27 mm (.050 inch) spacing. AWG #28 (Stranded) or #30 (solid)

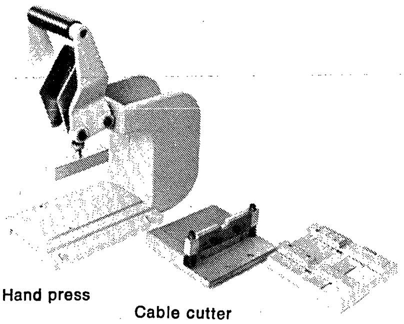
I.D.C. TOOLS

FCN-700, 710, 730, 740, 750, 760, 770



Special tools are needed for IDC 700-Series connectors: a cable cutter, a locator plate for positioning connectors and cables, and a hand press to apply welding pressure. (See the figure on the left.)

- All tools are easy to use, so even a beginner can install Fujitsu connectors.
- The number of pins can be changed easily only by setting the connector guide to a specified pin hole.
- The cable cutter remains sharp, providing fast, easy cuts for a long time.
- Instruction manuals for tools are available from Fujitsu agents. Just ask.
- If you have any questions, please contact the nearest Fujitsu sales office or agent.

ORDERING INFORMATION

Tool Name	Designation
Cable cutter (common)	FCN-707T-T001/H
Hand press (common)	FCN-707T-T101/H

Locator plate model 780	FCN-787T-T028/H

CRIMPING TOOLS — FCN-720

Discrete wires are connected to FCN-720 connectors without solder. Such wires can be selected from several types. Although crimping tools are sold by several companies, they are not compatible with each other. An automatic crimping machine is also available, contact Fujitsu for details. (See the figure on the left.)

Fujitsu's crimping tool can be used easily, even by a beginner. When using the tool, be sure to adjust the size (crimp height) shown in the figure at the right after solderless connection. If this is not done properly, wires may loosen or break off.

ORDERING INFORMATION

Wire Size AWG #	Contact Type		Semiautomatic Crimping Tool		Hand Crimping Tool	Cross-section of Wire (mm²)	Crimp Height	Insulation Diameter	Length Strip
	Standard Type	High Pressure Type	Press	Applicator

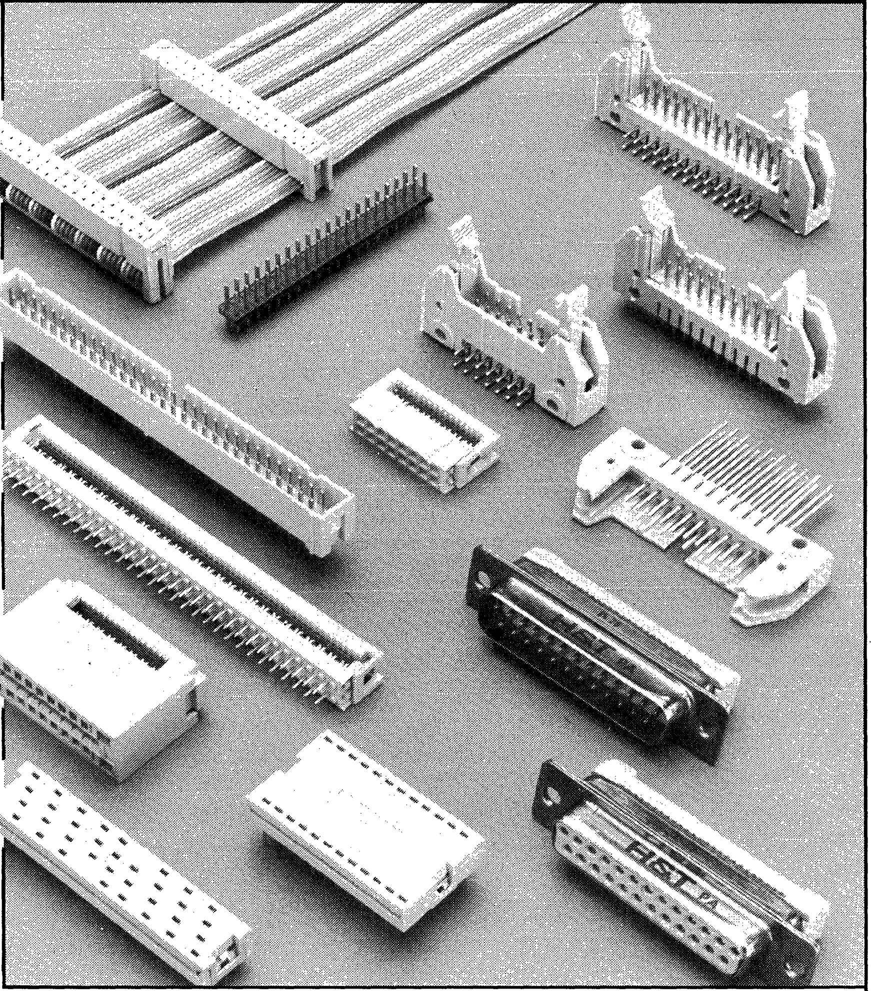
Available Locally Through Your Grayhill Distributor

H&T COMPONENTS

IDC Connectors –



Your local H&T distributor stocks a broad line of MIL-C-83503 compatible insulation displacement connectors, manufactured in gray Valox® for immediate delivery.

His prices are very competitive for IDC components that are completely intermateable and interchangeable with connectors that you are now using.

He can deliver complete, tested ribbon cable assemblies to your specifications, typically below your true cost.

H&T Components supports both you and your distributor through a nationwide network of manufacturers' representatives. They will gladly share their experience, give you applications assistance, and show you how IDC connectors can save you time and money. They will demonstrate or provide samples of these H&T products:

- **SOCKETS,** completely intermateable and interchangeable with other industry standard connectors, 10 to 60 contacts. Sockets have selectively gold plated dual beam contacts, mate reliably with .025" round or square posts or headers. Can be daisy chained.
- **HEADERS,** standard 3 or 4-wall, ***new*** low profile 4-wall box style. Right angle or straight, solder or wire wrap termination. Molded in polarization keys. Box style's low profile and high density saves height and board space. Low cost, low profile strip headers, 10 to 80 contacts, can be cut to any length.
- **PCB TRANSITION CONNECTORS,** connect ribbon cable permanently to PCB without stripping. Terminate before or after soldering to board. Standard 4-row 10 to 60 contacts. ***New*** 2-row (10 to 64 contacts) occupies 25% less board space than 4-row, and is cost saving replacement for standard IDC headers and sockets with .100" centers.
- **CARD EDGE CONNECTORS,** double sided, 10 to 60 contacts on 100" centers. Plain or with mounting ears. Separate polarization key.
- **DUAL-IN-LINE PLUGS,** 14, 16, 24, and 40 contacts. Mate with standard IC sockets to provide reliable, low cost interconnection.
- **NEW ALL METAL SHELL D SUB CONNECTORS,** help comply with FCC EMI/RFI emission requirements. Steel shells supplied with tin or zinc chromate finish. 9, 15, 25, and 37 contacts. Can be daisy chained. Mate with all industry standard D subminiature connectors.
- **RIBBON CABLE,** 10 to 60 conductors. UL Style No. 2651 and Style No. 2884. Plain, with single polarizing stripe, or fully color coded for breakout identification.
- **TOOLING,** hand termination tool, bench press, dies and tooling for H&T, 3M, Ansley, and other industry standard presses.

If you're not saving time and money yet with IDC connectors, CALL H&T AT (516) 567-2282 or write today for our 20 page catalog, list of stocking distributors, and the name of your local representative.

IN A HURRY? Contact distributor under our listing in the Manufacturers' Directory for a free sample and an immediate competitive price quote on an H&T connector interchangeable with the one you are now using.

manufacture and design of circuit components

HIRAM JONES

11607 VANOWEN STREET, NORTH HOLLYWOOD, CALIF. 91605
(213) 875-0213

Teflon† Insulated * Press-Type * Terminals and Test Jacks

TEFLON†

(TFE-FLUOROCARBON) per MIL-P-19468 has outstanding mechanical and electrical properties over a wide range of frequencies and temperatures (−100°C to +250°C), extreme chemical inertness, high heat resistance, zero water absorption and complete anti-hesiveness which make it a superior insulation.

TERMINALS

MATERIAL: Half-hard Brass per QQ-B-626, CDA360.
FINISH: Standard plating is Gold per MIL-G-45204. Other finishes supplied on request.

INSTALLATION TOOLS

Tools are available for all HIRAM JONES components. Specify Part Number and prefix "S." Example: S-602 Assembly Tool.

* PRESS-TYPE *

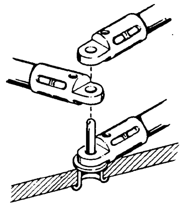
9W WIRE TERMINATION SYSTEM



Design Features

SOLDER-WICKING BARRIER

The design of HIRAM JONES 9W Wire Termination Systems provides a solder-wicking barrier, assuring flexibility of the wire and thus minimizing wire failures due to fatigue.

Wires are inserted in the 9W Crimp Terminals and crimped in place. Full engagement of the wire is determined by means of the inspection hole provided in each crimp terminal. The 9W Crimp Terminals are then attached to their mating Terminal Posts and soldered in place.

The entire termination is made without application of solder to the wire itself. It is, therefore, impossible for solder to "wick" up the wire.

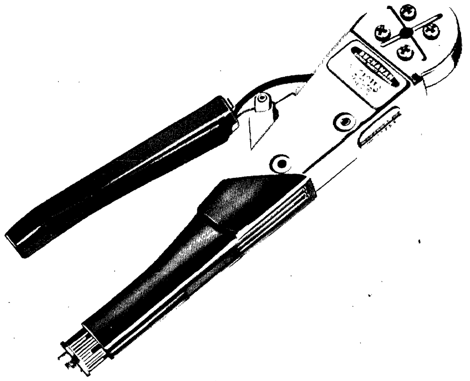
EQUIPMENT SERVICEABILITY

HIRAM JONES 9W Wire Termination System provides all the advantages of a hard wired system without the disadvantages of foreshortening of the service loop when disconnection and reconnection is required. The ease with which connections are made is a feature which is particularly advantageous in systems where connectors are undesirable, yet assemblies or sub-assemblies must be disconnected from time to time for service or replacement. To disconnect HIRAM JONES 9W Crimp Terminals, simply heat and lift off the mating terminal post. Reconnect by resoldering the 9W Crimp Terminals to the terminal post. Neither the mechanical nor electrical joint is affected by repeated removal and resoldering.

Increased Production Efficiency

By permitting pre-assembly of wires by unskilled operators, HIRAM JONES 9W Wire Termination Systems reduce production costs. Wires may be cut to length, stripped, and the 9W Crimp Terminals crimped in place. Final assembly consists of simply laying the pre-assembled Crimp Terminal on its mating terminal post and soldering in place.

9W MINIATURE MICROCRIMP TOOL



The 9W Miniature Microcrimp Tool (Buchanan No. 612118) is cycle-controlled to assure crimping to the selected depth. Once the crimping operation is started, the tool cannot be opened without completing its cycle.

9W LOCATORS — Specially designed locators are available for each of HIRAM JONES 9W Crimp Terminals. The use of one 9W Miniature Microcrimp Tool and the custom-designed 9W Locators is recommended to guarantee the precise crimp depth setting for each Crimp Terminal. When ordering, specify part number — i.e., 9W-206 Locator.

OCTADENT CRIMP — The 9W Miniature Microcrimp Tool produces an octadent configuration which provides uniform displacement of wire and crimp terminal material. The wire strands and the crimp terminal material are formed together in a solid mass with little or no reduction of the mil area of the wire strands.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

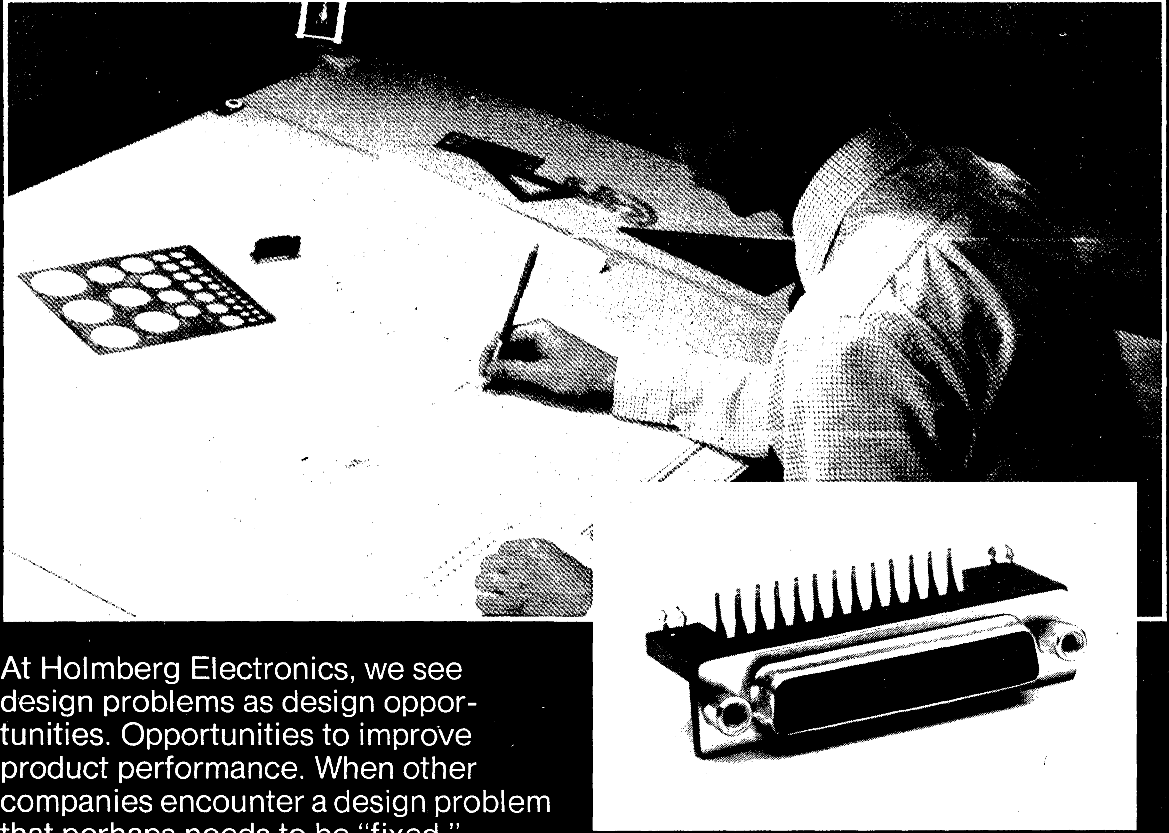
WE DON'T FIX DESIGN PROBLEMS. WE SOLVE THEM.



At Holmberg Electronics, we see design problems as design opportunities. Opportunities to improve product performance. When other companies encounter a design problem that perhaps needs to be "fixed," Holmberg sees the problem as an opportunity to be seized and "solved." Not fixed.

Design excellence is not a philosophy at Holmberg. It's a way of life. Something in which we take great pains attempting, and great pride achieving.

At Holmberg, our approach to innovation is simple. We use over three decades of acquired expertise, in-depth research and complicated experimentation to develop a simple end-result: a more practical and cost-efficient connector.

Offering a wide range of D-subminiature connectors, all-plastic and metal shell, and PC card edge connectors, Holmberg features custom-designed quality at all product levels.

At Holmberg Electronics, we don't fix problems. We solve them.

HOLMBERG ELECTRONICS®
The Innovation Connection.

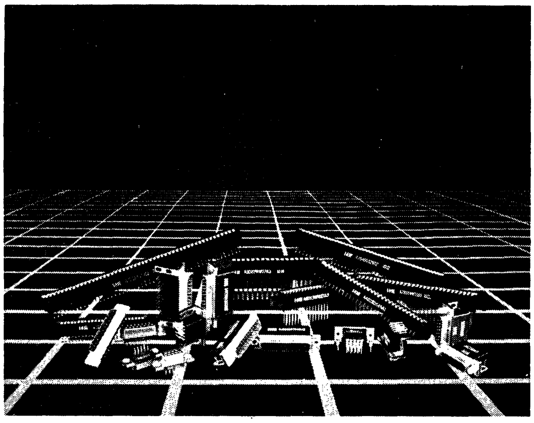
PC CARD EDGE CONNECTORS



"UL Recognized and CSA Certified"

DESIGN FEATURES

Holmberg's card edge connector series are double readout, configured with optional wire-wrap and square or round dip-solder tails and are suitable for either hand or automatic termination in backplane or discrete applications. Individual connectors are functionally and dimensionally interchangeable with any industry standard PC connector regardless of manufacturer and conform to the applicable design requirements of MIL-C-21097. All popular sizes from 6 to 65 positions are available.

PROVEN CONTACT DESIGN

Highly reliable contacts are utilized to ensure optimum normal contact force over the full range of PC board thicknesses. A uniquely contoured mating surface on each contact further increases reliability by concentrating the normal force in the real contact area while maintaining circuit continuity under all stipulated test and operating conditions. Individual contacts are replaceable if accidentally damaged during handling or installation for most series.

PROVEN INSULATOR DESIGN

Designed to meet or exceed UL flammability requirements, connector bodies are molded in UL 94V-0 thermoplastic material and are offered in several mounting styles. Solder standoffs are provided to facilitate cleaning and preclude solder wicking; all styles incorporate polarizing keyways between the contacts and a generous lead-in chamber for ease of PC card entry.

PROVEN PERFORMANCE

Utilizing only proven and the most cost-effective designs and materials, Holmberg connectors guarantee performance which meets or exceeds industry standard requirements, at the same time, providing an exemplary level of operational reliability at attractive and competitive prices.

DESIGN OPTIONS

A variety of plating, mounting, termination and identification options are offered to meet specific user requirements.

PERFORMANCE CHARACTERISTICS

Operating voltage:	600VDC (sea level)
Current rating:	3 - 5 Amperes*
Operating temperature:	-55°C to +125°C
Contact resistance:	10 milliohms
Insulation resistance:	5000 megohms minimum
Contact retention:	4 lbs. minimum - Dip Solder, 8 lbs. minimum - wire wrap.
Durability:	up to 500 insertions and withdrawals without degradation of performance, dependent upon contact plating thickness selected
Insertion/withdrawal force:	2 to 8 oz. average contact pair using .0620 steel test blade.
Temperature cycling:	MIL-STD-202, method 107B
Moisture resistance:	Humidity per MIL-STD-202, method 103
Vibration:	MIL-STD-202, method 204A
Thermal shock:	MIL-STD-202, method 107

Note: Specifications are subject to change without notice-consult factory for available modifications and verification of design details.

Note: Wire-wrap is a registered trademark of Gardner-Denver, specifications are subject to change without notice - consult factory for available modifications and verification of design details.

All dimensions shown in inches.

MATERIALS

Insulator body:	Glass filled thermoplastic, UL rating 94V-O, color - black
Spring contact:	Hi-Strength Copper Alloy
Polarizing Key:	Nylon, color-white

D SUBMINIATURE CONNECTORS

PRODUCT DESCRIPTION

Holmberg's H2, H3 and H4 Series D Subminiature connectors are all plastic or metal-shielded for printed circuit board applications in the telecommunications, data processing, instrumentation, industrial control and other industries where low cost and high performance are required. They are fully intermatable with all D Subminiature connectors - including crimp, solder and insulation displacement types.

The connector housing is molded in black glass-filled polyester, UL rated 94 V-O. Contacts are high strength copper alloy and are selectively plated- gold-over-nickel in the contact area with solder plating on the tails. This assures contact reliability, superior solderability and long shelf life at a lower cost.

The metal shielded connector is designed specifically for mating with EMI-RFI qualified cables, the H4 metal shell connectors incorporate a grounding bulkhead mount, or can be supplied with a grounding strap for grounding to the topside, underside or both, of PC boards. The bright tin-plated steel metal shell provides a cost-effective medium for grounding -- which can also be accomplished through the mounting hardware.

Available in 9, 15, 25 and 37 positions, the unique design of the Holmberg D Subminiature connectors ensures excellent contact retention and precisely located, rigid contact tails for easy assembly.

DESIGN FEATURES

LARGE LEAD-IN PROVIDES EASY MATING, Allows male plug to be off true position as much as + .040" and still mate. Corner radii around "D" outline also aids pin alignment. SMOOTH LEAD ON TIP OF PINS. Allows easy mating and low insertion force with mating receptacle.

RIGID TAILS NEED NO SUPPORT. Right angle tails have channel cross-section for exceptional strength and rigidity. They are precisely positioned for easy mounting. Since no plastic inserts or spacers are required for alignment or support, nothing obstructs cleaning during soldering.

60/40 TIN/LEAD SELECTIVE PLATING ON THE TAIL ENHANCES SOLDERABILITY. Nickel-plated tail surface above the board forms effective solder mask. Large cross-section of the above board tail portion provides good heat sink to further control solder application.

SELECTIVE GOLD PLATING. A unique double-stamping process permits precise placement of valuable gold only where needed.

METAL SHELL provides electrical ground path continuity and magnetic shielding, from the mating receptacle metal shell through the grounding bumps on the male shell. The steel shell with bright tin-plating also provides for grounding through the factory installed mounting hardware.

HARDWARE KIT

Part No. 98039 (RA)
Part No. 98044 (ST)

Consists of: 2 #4-40 screw-threaded inserts
2 Flat washers
2 Lock washers
2 Retaining nuts

Packaged in a polyethylene bag.

PERFORMANCE CHARACTERISTICS

Operating voltage:	600VDC (sea level)
Current rating:	5 Amperes
Operating temperature:	-55°C to +125°C
Contact resistance:	10 milliohms max. @ rated current
Insulation resistance:	5000 megohms minimum
Dielectric withstanding voltage	1000 VAC minimum
Durability:	up to 500 insertions and withdrawals without degradation of performance, dependent upon contact plating thickness selected

MATERIALS

Insulator body:	Glass filled polyester, UL rating 94V-0, color-black
Contact:	High yield strength brass alloy per Spec QQ-B-750.
Metal Shell:	Steel, bright tin plate.

UL Recognized and CSA Certified

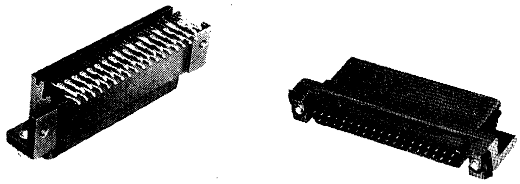
H2 SERIES

9, 15, 25 AND 37 POSITIONS

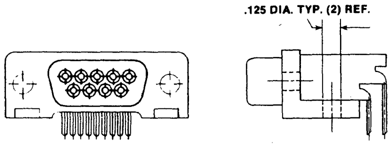
ALL PLASTIC RIGHT ANGLE FEMALE RECEPTACLES FOR PRINTED CIRCUIT BOARD MOUNTING



MOUNTING STYLES

STYLE A

This configuration is the basic connector with mounting holes only. It comes with no permanent hardware, but a separate hardware kit (part number 98039) is available.



.125 DIA. TYP. (2) REF.

MOUNTING STYLE A SIDE VIEW

STYLE B

This configuration includes a #4-40 threaded standoff-which provides 8 in-lb torque retention, for mating to RS 232 cable assemblies. One-piece construction of the factory-installed insert eliminates need for separate hardware.

MOUNTING STYLE B SIDE VIEW

STYLE D

Unique Style D configuration has molded-in plastic standoff with factory-installed zinc-plated brass hex-headed, #4-40 threaded insert. Specifically designed for RS 232 cable assemblies. Insert is threaded all the way through. Hexagonal shape positively locks insert in place to provide 8 in-lb torque retention and eliminate rotation. Style D is functionally equivalent to Style B and Style G inserts. Available with Style 2 board mounting holes only.

THREADED INSERT
.314
.100 (2)

MOUNTING STYLE D SIDE VIEW

STYLES C & T

Style C mounting provides a flush, molded-in, #4-40 threaded insert of zinc-plated brass. The insert has rows of knurling that capture it in the plastic, preventing rotation or push-out. It has extremely high torque retention (minimum 10 in-lb).

Style T2 is the same as mounting style C2 except it uses self-locking stainless steel inserts with black dry-film lubricant. They are designed to prevent the jack-screw from loosening and eliminates lockwashers and nuts.

MOUNTING STYLES

STYLE A

This configuration is the basic connector with mounting holes only. It comes with no permanent hardware, but a separate hardware kit (part number 98039) is available. Style A is a new design which is produced in a cammed mold, eliminating top and bottom grooves around board-mounting holes. This style is easier to rivet to the board because the rivet head is completely supported by solid plastic. It is also recommended for installations having board traces running under the connector — since there are no sharp edges to damage traces.

STYLE B

This configuration includes a #4-40 threaded standoff which provides 8 in-lb torque retention, for mating to RS 232 cable assemblies. One-piece construction of the factory-installed insert eliminates need for separate hardware.

D-SUBMINIATURE CONNECTORS .318 & .478 FOOTPRINT AND HIGH PROFILE

PRODUCT DESCRIPTION

Holmberg's H3, H5, H6, H7, H8 and H9 Series D Subminiature connectors are all plastic or metal-shielded for printed circuit board applications in the telecommunications, data processing, instrumentation, industrial control and other industries where low cost and high performance are required. They are fully intermatable with all D Subminiature connectors - including crimp, solder and insulation displacement types.

The connector housing is molded in black glass-filled polyester, UL rated 94 V-O. Contacts are high strength copper alloy and are selectively plated-gold-over-nickel in the contact area with solder plating on the tails. This assures contact reliability, superior solderability and long shelf life at a lower cost.

The metal shielded connector is designed specifically for mating with EMI-RFI qualified cables, the metal shell connectors incorporate a grounding bulkhead mount, or can be supplied with a grounding strap for grounding to the topside, underside or both, of PC boards. The bright tin-plated steel metal shell provides a cost-effective medium for grounding — which can also be accomplished through the mounting hardware.

Available in 9, 15, 25 and 37 positions, the unique design of the Holmberg D Subminiature connectors ensures excellent contact retention and precisely located, rigid contact tails for easy assembly.

DESIGN FEATURES

LARGE LEAD-IN PROVIDES EASY MATING, Allows male plug to be off true position as much as +.040" and still mate. Corner radii around "D" outline also aids pin alignment. SMOOTH LEAD ON TIP OF PINS. Allows easy mating and low insertion force with mating receptacle.

RIGID TAILS NEED NO SUPPORT. Right angle tails have channel cross-section for exceptional strength and rigidity. They are precisely positioned for easy mounting. Since no plastic inserts or spacers are required for alignment or support, nothing obstructs cleaning during soldering.

60/40 TIN/LEAD SELECTIVE PLATING ON THE TAIL ENHANCES SOLDERABILITY. Nickel-plated tail surface above the board forms effective solder mask. Large cross-section of the above board tail portion provides good heat sink to further control solder application.

SELECTIVE GOLD PLATING. A unique double-stamping process permits precise placement of valuable gold only where needed.

METAL SHELL provides electrical ground path continuity and magnetic shielding, from the mating receptacle metal shell through the grounding bumps on the male shell. The steel shell with bright tin-plating also provides for grounding through the factory installed mounting hardware.

HARDWARE KIT

98039-01
98039-04

Consists of: 2 #4-40 screw-threaded inserts
2 Flat washers
2 Lock washers
2 Retaining nuts

Packaged in a polyethylene bag.

Consult factory for mounting applications

PERFORMANCE CHARACTERISTICS

Operating voltage:	600VDC (sea level)
Current rating:	5 Amperes
Operating temperature:	-55° to +125° C
Contact resistance:	10 milliohms max. @ rated current
Insulation resistance:	5000 megohms minimum
Dielectric withstanding voltage	1000 VAC minimum
Durability:	up to 500 insertions and withdrawals without degradation of performance, dependent upon contact plating thickness selected

MATERIALS

Insulator body:	Glass filled polyester, UL rating 94V-O, color-black
Contact:	High yield strength brass alloy per Spec QQ-B-750.
Metal Shell:	Steel, bright tin plate.

UL Recognized and CSA Certified

MOUNTING STYLES

STYLE A

This configuration is the basic connector with mounting holes only. It comes with no permanent hardware, but a separate hardware kit (part number 98039-01) is available.

.328
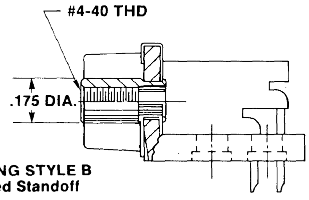
.125 ± .015/.010
.230
.478
.112
.920

MOUNTING STYLE A

STYLE B

This configuration includes a #4-40 threaded standoff-which provides 6 in-lb torque retention, for mating to RS 232 cable assemblies. One-piece construction of the factory-installed insert eliminates need for separate hardware. Also, outside or inside grounding straps are available, factory installed, for grounding to the P.C. board (see part number description for ordering).

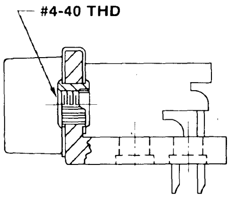


#4-40 THD
.175 DIA.

MOUNTING STYLE B
Threaded Standoff

STYLE C

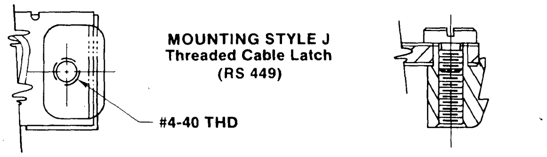
Style C mounting provides a flush #4-40 threaded insert with 6 in-lb torque retention for bulkhead mounting. The factory installed inserts eliminates the need to install jamb nuts in back of the panel. Also, available with inside or outside grounding straps.



MOUNTING STYLE C
Flush Threaded Insert

STYLE J

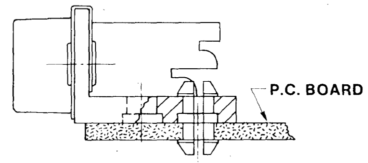
Style J provides a unique connector which mates to both RS 232 and RS 449 cable assemblies.



MOUNTING STYLE J
Threaded Cable Latch
(RS 449)

PCB OPTIONS

PCB OPTION P - Snap Latch
Factory installed into the connector board mounting holes, eliminating the need to use loose piece hardware to install on the P.C.B. Installs in the standard .120 Dia. mounting holes on a .062 thick board. Material: Nylon.



SNAP LATCH OPTION
(.062 Board)

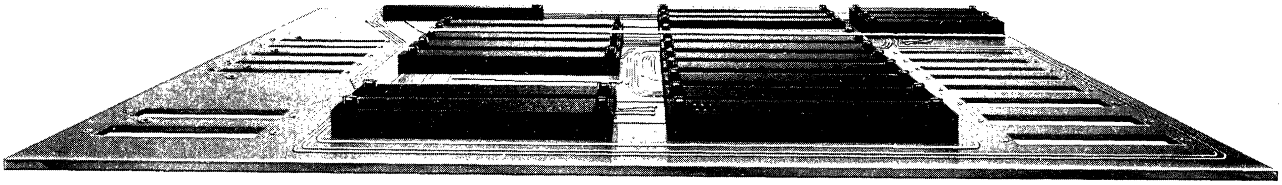
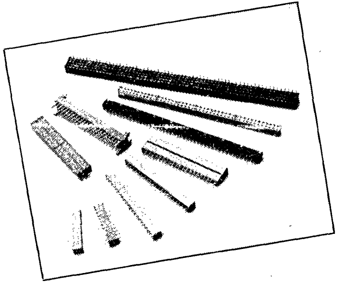
THE BEST CONTACTS ACROSS THE BOARD...

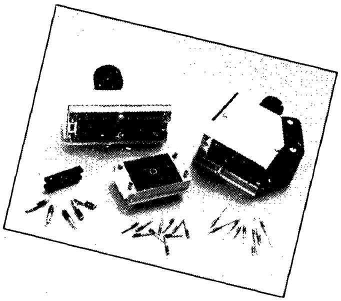


LOW INSERTION FORCE HYPERTACS®

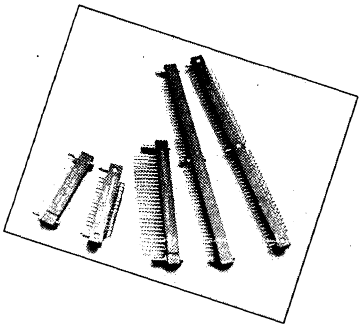
Hypertronics' connectors feature Hypertac®, a design innovation that satisfies requirements previously considered impossible. The essence is a hyperboloid shape formed by multiple wires that stretch and wrap around the mating pin to create multiple contact paths.



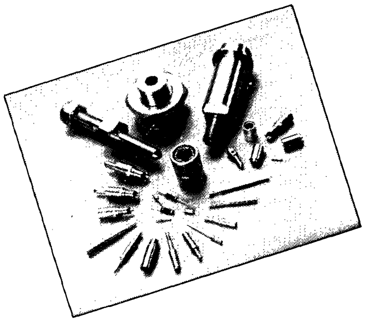
KG Series–Sub-Miniature Low Profile LIF/PCB Connectors • .100 x .100 grid from 22-90 positions • .240 height between parallel boards, sandwich style • Mother/daughter board, board to chassis and other applications • Inductance as low as 50% of comparable designs.



N Series–High Density LIF Mini-Modular Connectors • Design your own special connector from standard parts • 10 position–5 amp and 5 position – 9 amp modules • Up to 700 contacts on a .100 x .100 grid • Over 40,000 potential combinations for rack and panel, cable to chassis, and programming applications.



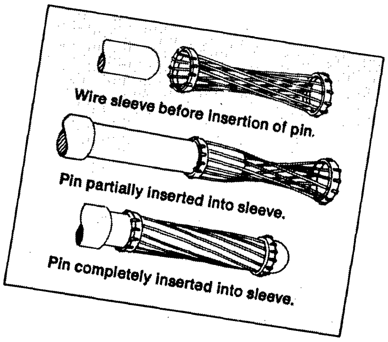
KA Series–Sub-Miniature LIF/PCB Connectors • The choice in demanding military and industrial applications • 17-320 position models with average contact insertion force of 1 ounce • Removable p.c., wire wrap, solder and crimp terminals • Integral guide and locking hardware.



Y Series–LIF Pins and Sockets • 2.5 to 200 amp standard pins and sockets • Customized p.c. or backplane mounting • Connect to cable or printed circuit boards.

All Hypertronics connectors utilize the Hyptertac® design, resulting in these unique characteristics:

- extremely low contact insertion/extraction force (as low as ½ ounce).
- electrical continuity under extremes of shock and vibration (tested below 10 n.s.).
- mechanical life exceeding 100,000 cycles with excellent electrical repeatability.



Wire sleeve before insertion of pin.
Pin partially inserted into sleeve.
Pin completely inserted into sleeve.

Customized designs featuring the Hypertac® contact are available from Special Products Division. For more information on these versatile connectors, call Toll-Free 1-800-225-9228 or write for a copy of our brochure, "New Horizons in Connectors."

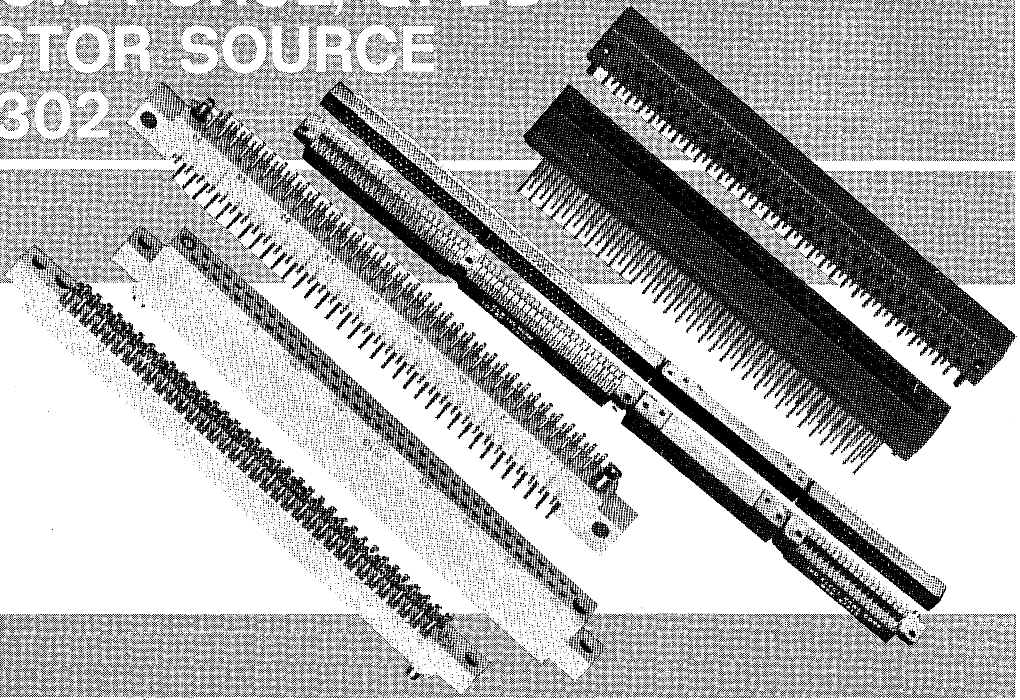
IEH

YOUR LOW FORCE, QPL'D CONNECTOR SOURCE FOR 55302



FAMILY OF OVER 60 SIZES

Family of over 60 sizes including— 10 - 14 - 20 - 24 - 26 - 30 - 36 - 40 - 44 - 50 - 54 - 56 - 60 - 66 - 70 - 90 - 92 - 100 - 120 - 122 - 160 - 208 - 300 - 412 - 760.

Low force connectors utilizing Hypertac contacts are available from IEH in accordance with the following slash sheets of Military Specification 55302/56/57/58/59/60/61/62/64/138/139/21/22

Low force data:

Insertion: 0.11 lbs. x No. of contacts maximum

Extraction: 0.08 lbs. x No. of contacts minimum

Example — 160 Pin Hypertac
Max. insertion force = 17.6 lbs.
Min. extraction force = 12.8 lbs.

All our connectors are form, fit, and function, intermateable and interchangeable to the industry's most popular types.

Off shelf delivery nationally from Conco Electronics, Powell Electronics, & Time Electronics.

Please review our IEH Hypertac* low insertion force connector benefits:

1. An insertion and extraction force of less than one ounce per contact.
2. A high reliability closed entry socket which allows a minimum of 10,000 connector life cycles with no loss of mechanical or electrical integrity.
3. A multiplicity of pin to socket contact points (a **minimum** of 15 points, not a **maximum** of 2 or 3 points) due to a 360 "wraparound."
4. Unsurpassed shock and vibration characteristics.
5. Low contact resistance due to a greater than average contact area.
6. Lowest inductance for newly developing high speed circuits.
7. Elimination of heavy duty injectors extractors from your printed circuit cards — saves manufacturing time, money, and weight.
8. No more broken printed circuit board connectors—makes happier customers and assembly personnel.
9. Mil-C-55302 Approval.
10. A family of low force connectors (5 to 320 contacts with many variations).
11. Support from an electronics manufacturer with over 40 years of experience in the industry.
12. Cost savings methods of precious metals selective plating.
13. Excellent factory delivery and competitive pricing.
14. Off the shelf delivery from our national distributor network.

MIL-C-55302 QPL CONNECTORS
Low force connectors, utilizing Hypertac® contacts, are available from IEH in accordance with the following Slash Sheets of Military Specification MIL-C-55302.

If your needs require low force connectors with the added advantage of extended life cycles consider Hypertac® and IEH for future programs.

IEH, now producing the most modern state of the art High Density Low Force Hypertac® Connectors for the prime military electronics market place worldwide has created a careful blending of progressive management, creative and dedicated employees with modern equipment resulting in a highly successful product line of interconnecting devices.

IEH has demonstrated the experience and technical competence necessary for leadership in the manufacture and marketing of advanced connector designs and systems.

We hope you will consider us the next time you are planning purchases of electrical/electronic interconnections.

Our facilities, service, availability and lowest possible industry pricing combine with an honest interest to be a helpful and valuable supplier.

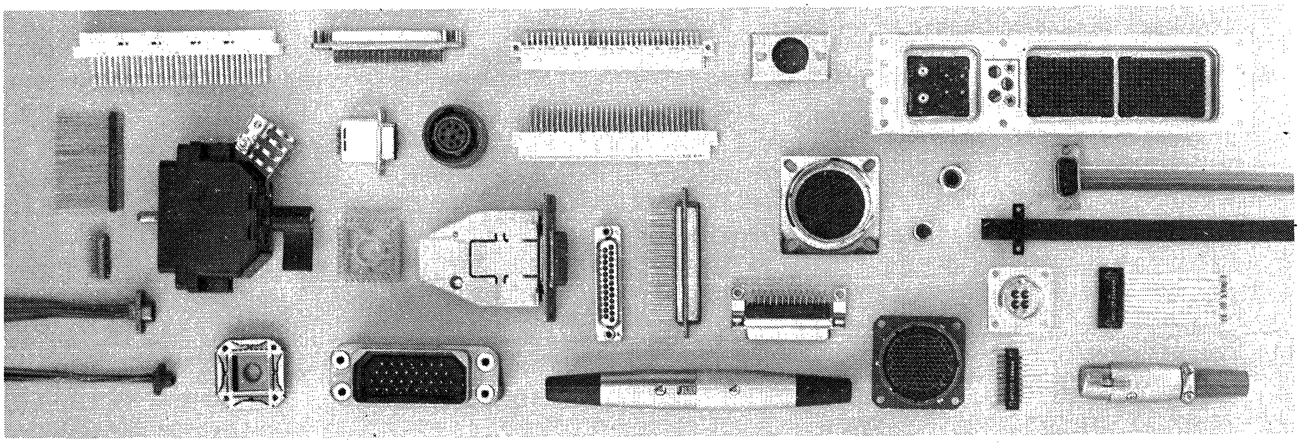
Cannon Worldwide
Connector Selection Guide



Together, We Create Solutions

CANNON ITT
The Global Connection

INTRODUCTION

It's almost impossible to find electrical or electronic equipment anywhere in the world that doesn't involve the use of one or more ITT Cannon products. Our connectors are in place within electronic systems ranging from computers to telecommunications to transportation, vending machines to nuclear reactors, deep space to deep sea, in military aircraft to commercial aircraft.

This guide lists some of the more popular connector configurations, both standard and special and is designed to help you select the proper connector series and the appropriate catalog from which to specify for your requirements.

To use this guide simply determine the type of connector configuration you wish to use and identify your market application requirement. The Table of Contents lists the product by product configuration or special applications. A brief description and catalog reference, contact data, and broad application uses are shown so that you may better select the catalog (or catalogs) which you would like. We have also included on pages 4 and 5 a Commercial Market Product Cross Reference List and a North American and European Military Specification/Cannon Product Cross Reference List for your use. For catalog data please write to ITT Cannon, 666 East Dyer Road, P.O. Box 929, Santa Ana, California 92702-0929, telephone 714/557-4700. Or, call our toll-free number **(800) 845-7000** from anywhere in the U.S. and you will automatically reach your nearest Cannon Sales Office whc will quickly direct you to your nearest Cannon branch office.

FILTER CONNECTORS

DESCRIPTION	CONTACT DATA	APPLICATIONS	CATALOG
DPXJ  Rack/panel filter connectors in single, two, three or four gang shells interchangeable with standard DPX, DPXMA, DPXME and meets requirements of ARINC 404. Provide optimum attenuation of RFI/EMI. **FDPXJ CATALOG**	**CONTACTS** Contact/Wire Size 22 20 16 Coax. contacts available SOLDER TERMINATION Consult factory for availability of crimp filter contacts	• Electronic Countermeasures Equipment • Communications Equipment • Encoder/Decoder Equipment • Radar Guidance Systems • Instrumentation • Navigational Equipment • Deep Space Applications • Military Aircraft • Commercial Aircraft	
D*J Rectangular subminiature filter connectors intermateable with standard D subminiature and MIL-24308 types. Optimum RFI/EMI attenuation provided. **FDJ CATALOG**	**CONTACTS** Contact/Wire Size 20 Coax. contacts available SOLDER TERMINATION Consult factory for availability of crimp filter contacts		
PVJ  Bayonet Coupling Miniature circular filter connectors provide optimum attenuation of RFI/EMI. PVJ equivalents to MIL-C-26482 and MIL-C-83723 types. Also available in hermetic. **FPVJ CATALOG**	**CONTACTS** Contact/Wire Size 20 16 SOLDER TERMINATION Consult factory for availability of crimp filter contacts		KJJ/KJJL  Bayonet Coupling KJJ (low profile)/KJJL (scoop proof) miniature circular filter connectors combine functions of standard connector and a feed-thru filter into one complete package. Meet applicable portions of MIL-C-38999 Series I, II and III. Provides optimum RFI/EMI attenuation. Also available in hermetic. **FKJJ CATALOG**	**CONTACTS** Contact/Wire Size 22D 20 16 SOLDER TERMINATION Consult factory for availability of cirmp filter contacts		

DESCRIPTION	CONTACT DATA	APPLICATIONS	CATALOG
TKJ  Threaded Coupling A transverse monolith filter design incorporated into the KJJ (M38999) connector family. **TKJ CATALOG**	**CONTACTS** Contact/Wire Size 22D 22M 22 20 16 12	• Missiles • Military Communications • Military Weapons System • Radar Ground Control Equipment	
EMI/RFI PRODUCTS

DESCRIPTION	CONTACT DATA	APPLICATIONS	CATALOG
SHIELDED D subminiature  Available in kits or individual connectors to suit your EMI/RFI equipment requirements. Assures equipment compliance with FCC Docket 20780.	**CONTACTS** Contact/Wire Size 20 SOLDER OR CRIMP TERMINATION	• Computers • Electronic Games • Telecommunications • Medical Electronics • Computer Peripherals • Black Box • Business Machines • Compact Packaging Requirements	
TRANSVERSE MONOLITH D subminiature  Significantly reduces EMI/RFI emissions, assuring equipment compliance with FCC Docket 20780. **FCC CATALOG**	20 SOLDER POT, STRAIGHT AND RIGHT ANGLE PC, WIRE WRAPPABLE

ITT CANNON PRINTED CIRCUIT/INPUT-OUTPUT

DESCRIPTION	CONTACT DATA	APPLICATIONS	CATALOG
ADAPTA-CON CONNECTORS  Low-force receptacle interconnections for P.C. and I/O applications, custom made to any size or configuration. **ACBP CATALOG**	**UBS UP TO 130 CONTACTS** **UBC UP TO 86 CONTACTS** Contact/Wire Size 18 thru 28 SOLDER, CRIMP TERMINATION	• PC Board Interconnections • Computer Peripheral Equipment • Automatic Test Equipment	DL CONNECTORS  Low mating force, high performance, cam-actuated spring contacts on .100″ centers. I/O, cord-to-cord, cord-to-panel applications. **DL CATALOG**	**UP TO 2496 CONTACTS** Contact/Wire Size 18 thru 30 CRIMP OR WIRE-WRAPPING TERMINATION	• Computer Main Frames • Computer Peripherals • Communications Systems • Ground Support Systems • Guidance/Control Systems	
ITT Cannon offers a broad range of edgecard (printed circuit) connectors. Available are modular printed circuit connectors accommodating from 2 to 200 contacts in gold, silver or tin plating. Contact spacing ranges from .100 to .200 inches. Commercial, military specification and DIN types are also available in a variety of mounting styles. The following generally describes several of ITT Cannon's direct and indirect discrete and backpanel types. Condensed technical data is provided in a selector chart below.

DESCRIPTION | **APPLICATIONS** | **CATALOG**

PC CONNECTORS DIRECT (ONE PIECE)

Series	Number of Contacts	Contact Arrangement	Current Rating	Termination Styles
G03	5 to 89 10 to 178	Single read-out Dual read-out	3 A max.	Eyelet, Solder Tails, Wrap Posts
G05	2 to 100 4 to 200	Single read-out Dual read-out	4.5 A max.	Eyelet, Solder Tails, Wrap Posts
G08 (unshrouded)	8-70 (even increments, double row) 2-35 (single row)	Dual read-out	3 A max.	Solder Tails, Wrap Posts

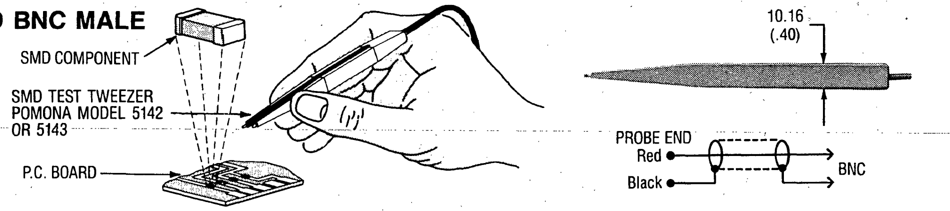
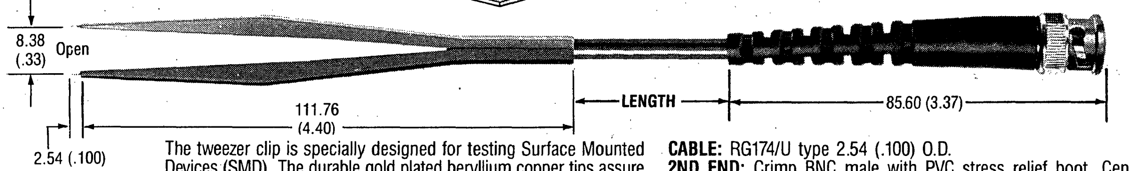
SMD TEST TWEEZER TO BNC MALE





Model No.
5142-K-48

The tweezer clip is specially designed for testing Surface Mounted Devices (SMD). The durable gold plated beryllium copper tips assure a positive electrical connection. The tweezer gives rapid and convenient testing.
1ST END: SMD Test Tweezer: Glass filled nylon, Color: One red, one black. Tips heat-treated beryllium copper, gold plated.
CABLE: RG174/U type 2.54 (.100) O.D.
2ND END: Crimp BNC male with PVC stress relief boot. Center conductor gold plated brass.† Teflon insulated. Shell, tarnish resistant plating.
RATING: 500 VRMS, 3 Amps, +50°C. (+122°F.) Max.

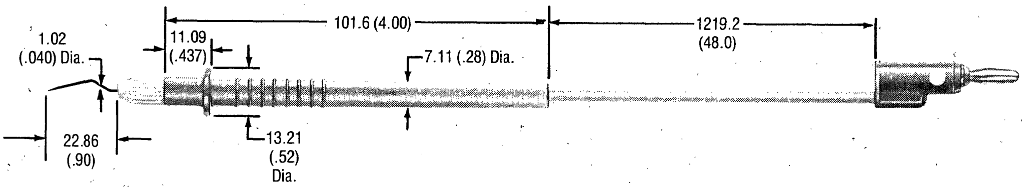
SMD MICROTIP TEST PROBE



Model No.	Color
5144-48-0	Black
5144-48-2	Red

The microtip is specially designed to probe SMD contacts. It features a stainless steel needle point tip that is flexible to help prevent damage to the SMD lands. The microtip is curved to aid in probing of hard to reach areas.
1ST END: SMD Microtip Test Probe. Molded nylon with finger guard and replaceable stainless steel microtip. (See model 5133, page 37).
WIRE: 20 AWG, strand. 41 x 36 T.C. extra flexible polyvinyl insulation 2.21 (.087) O.D.
2ND END: Banana Plug; spring, one piece heat treated beryllium copper, nickel plated. Polypropylene insulated.
RATING: 3000 WVDC, 5 Amps, +55°C. (+131°F.) Max.

TRANSISTOR "BURN-IN" SOCKET

This burn-in socket was specifically designed to test transistors and regulators where high currents and temperatures are encountered. The flat bladed contacts make it ideal for testing TO-92 or TO-220 configurations, both straight or stagger lead. The two piece design allows easy replacement of the contacts.
MATERIAL: Contacts, beryllium copper.
FINISH: Selective gold plated 30 microinch in contact area, remainder gold flashed.
INSULATION: Polyphenylene sulfide, UL 94V-0
RATING: 100 WVDC, 10 Amps, +150°C. (+302°F.) Max.

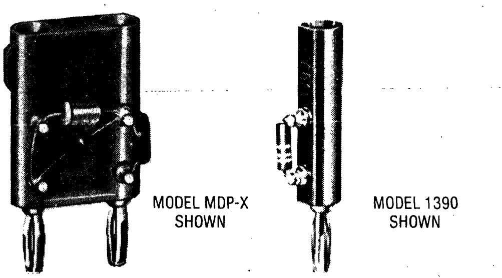
COMPONENT MOUNTING ISOLATION PLUGS

SPLIT-TERMINAL ISOLATION PLUGS

Create passive and active networks, voltage dividers, isolation networks or attenuators with the split-terminal isolation plugs described below.

Tough thermoplastic material molded to plug body and connectors insures maximum strength, moisture resistance and excellent insulative properties.

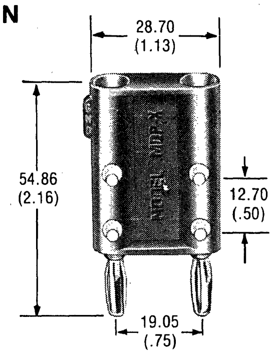
TYPICAL APPLICATION



DOUBLE BANANA PLUG FOUR TERMINAL ISOLATION

Provides four terminal isolation. Top stackup receptacles isolated from lower plugs. Ideal for insertion of matching network in laboratory VTVM's, signal generators, etc. Bright tin plated solder turret terminals for permanent noise-free connections.

UPPER: Double banana jack 4.22 mm (.166) dia., on 19.05 (.750) centers.
INSULATION: Polypropylene, red.
LOWER: Double banana plug, Spring, one piece heat treated beryllium copper. Nickel plated. Fits standard banana jack.
RATING: 2500 WVDC, 15 Amps, +55°C. (+131°F.) Max.



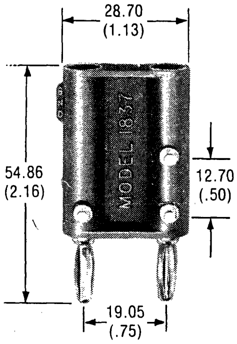
Model No.
MDP-X

NET 5.95

DOUBLE BANANA PLUG THREE TERMINAL ISOLATION

Provides three terminal isolation. Excellent for "L" and "Pi" networks. Plug and receptacle nickel plated. Bright tin plated solder turret terminals for permanent noise-free connections. "Ground" is straight feed-thru. Hot side isolated.

UPPER: Banana jacks, 4.22 mm (.166) dia. Brass, nickel plated.
INSULATION: Polypropylene, blue.
LOWER: Double banana plug. Spring, one piece heat treated beryllium copper. Nickel plated. Fits standard banana jack.
RATING: 2500 WVDC, 15 Amps, +55°C. (+131°F.) Max.



Model No.
1837

NET 6.50

ADAPTER — BINDING POSTS TO BNC MALE FOUR TERMINAL ISOLATION

Permits single or double banana plugs to be used with equipment having BNC female. Provides isolation for a four terminal network. Binding posts facilitate connections of test leads or additional components. Bright tin plated solder turret terminals provide permanent noise-free connections.

UPPER: Insulated binding posts on 19.05 mm (.750) center with 4.22 mm (.166) dia. jacks.
INSULATION: Polypropylene, black.
LOWER: BNC male.

CONNECTOR TEST ADAPTERS

CONNECTOR TEST ADAPTERS

An ideal test adapter for the rapid testing of the hard-to-get-at contacts of multi-pin MS type connectors such as miniature circular, standard circular and rack and panel. Excellent for testing of continuity, voltage and signal on individual contacts. Test adapter available in pin and socket contact sizes 22, 20, 16 and 12.

- Gold plated contacts.
- Flexible tip prevents damage to connector contacts if test adapter is accidentally bent.
- Flexible tip allows testing of adjacent contacts.
- Fully insulated to prevent accidental shorting.
- Accepts standard banana plug.
- Model 4690 also fits .635 mm (.025) square pins

UPPER: Banana jack, 4.22 mm (.166) dia., brass, nickel plated.

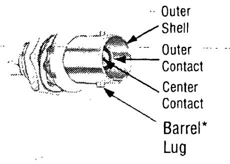
TRIAXIAL CONNECTORS

TRIAXIAL CONNECTORS

Triaxial connectors accommodate the need for low level signal patching and balanced line applications. Designed for use with single conductor, double shielded cable. These connectors feature a concentric design with center contact, outer contact and outer shell (see photo). This concentric design does not require matching of halves such as the polarized stepped insulator connectors.



*Two lug model is shown. On units having three lugs, the spacing is 120°

BNC FEMALE TO TRIAXIAL MALE (2 LUG)

Allows the use of a BNC male on equipment having a triaxial female with two lugs.

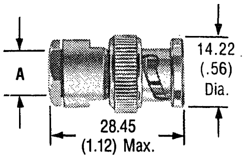
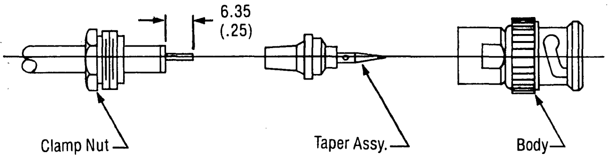
BNC MALE CABLE PLUGS FIELD SERVICEABLE

These connectors make it a snap to change or install connectors in the field. Just strip the cable end as shown in the illustration. Push the taper assembly under the braid and solder. Then thread the clamp nut into the body and you've created a fine connection.
SHELL: Brass, tarnish resistant plated.
INSULATION: Teflon.
CENTER CONTACT: Brass, gold plated per requirements of MIL-C-39012.
RATING: 50 Ohm impedance, 500 VRMS, Frequency range: DC to 500 MHz.





Model No.	Fits Cable	Dim. 'A'	Net
4997	RG58	5.59 (.22)	5.95
4998	RG59	6.60 (.26)	6.50
4999	RG174	2.79 (.11)	10.75

ITT POMONA ELECTRONICS

AUDIO CONNECTORS GENERAL INFORMATION

ITT Pomona audio connectors are rugged, quick disconnect devices designed for use in audio systems and other applications where reliability and quiet operation are the password. Three different series are provided, each with a solid, metal latching mechanism to assure positive, yet quick connect/disconnect. Some of the salient features of the three series are as follows:

XLA SERIES (MODELS 5098, 5099)
- Body, same as XLR.
- Insulator, glass filled thermoplastic.
- Contact sockets stamped nickel silver.
- Contact pins silver plated copper alloy UL recognized materials.

XLR PROFESSIONAL SERIES (MODELS 5109-5113, 5117-5131)
- Body, satin finish, nickel plated zinc or aluminum shell.
- Resilient socket insulator for excellent low noise/vibration performance.
- Contacts, silver plated, solid machined copper alloy.
- Nickel plated steel barrel.
- Nickel silver latch and stainless steel latch spring.
- UL recognized.

XLB SERIES (MODELS 5100-5103)
- Insulator, thermoplastic (glass filled nylon).
- Internal cable clamping mechanism.
- Three contacts with separate ground lug.
- UL recognized materials.

ITT POMONA ELECTRONICS

EXTRUDED SHIELDED "BLACK BOXES"

Aluminum boxes, slotted to accept 1.57 mm (.062) circuit boards and shielding dividers. Excellent for packaging electronic circuitry. Boxes have removable top and bottom covers.

(See page 71 for accessories and replacement parts.)

FEATURES:

- Shielded housing: Extruded aluminum alloy 6063-T5 or equivalent.
- Finish: Blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328.
- Covers: Top and bottom, aluminum 1100-H14 with clear anodized finish per MIL-A-8625.
- Completely enclosed box provides EMI/RFI shielding.
- Solder turret terminals for permanent noise free connection of components.

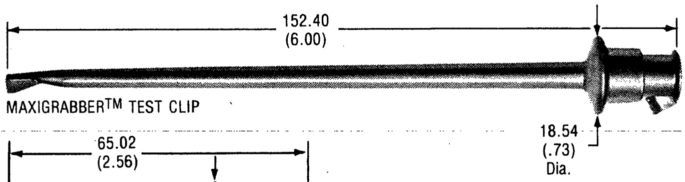
ITT POMONA ELECTRONICS

GRABBER™ TEST CLIPS

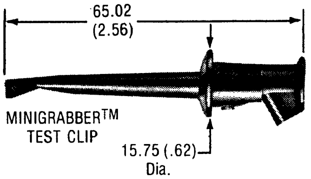
These plunger type action test clips are called Grabber™ test clips. The gold plated contact hook attaches rapidly to component leads and terminals. The specially designed tip (see illustration) slides easily on the 0.64 mm (.025) square wrapped wire terminals. The do-it-yourself Grabber™ test clips can be assembled quickly and easily by the user (see simplified instructions below) or the Grabber™ test clips can be purchased as completed patch cords that are firmly molded together to provide a strong, reliable and integral unit.

FEATURES:

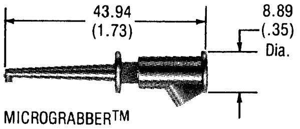
- Plunger type action between thumb and two fingers.
- Comfortable finger grip operation.
- Positive connection that won't pop off.
- No sharp teeth to damage or nick wires.
- Beryllium copper conductor berylco 165 per QQ-C-533; gold plated per MIL-G-45204 Type I.
- Stainless steel spring.
- Glass-filled nylon, +102°C. (+216°F.) Max.



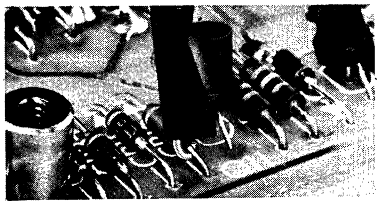
MAXIGRABBER™ TEST CLIP

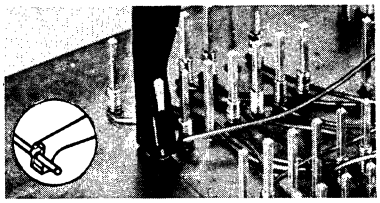


MINIGRABBER™ TEST CLIP



MICROGRABBER™ TEST CLIP





SIMPLIFIED ASSEMBLY PROCEDURE FOR DO-IT-YOURSELF GRABBER™ TEST CLIPS

1. Pull off thumb cap to expose contact connection.
2. Thread wire through thumb cap and strip 3.18 mm (.125).
3. Insert stripped end through tapered hole on contact, and solder.
   NOTE: Stripped end should be placed into the large opening of the tapered hole.
4. Slide thumb cap back onto contact.

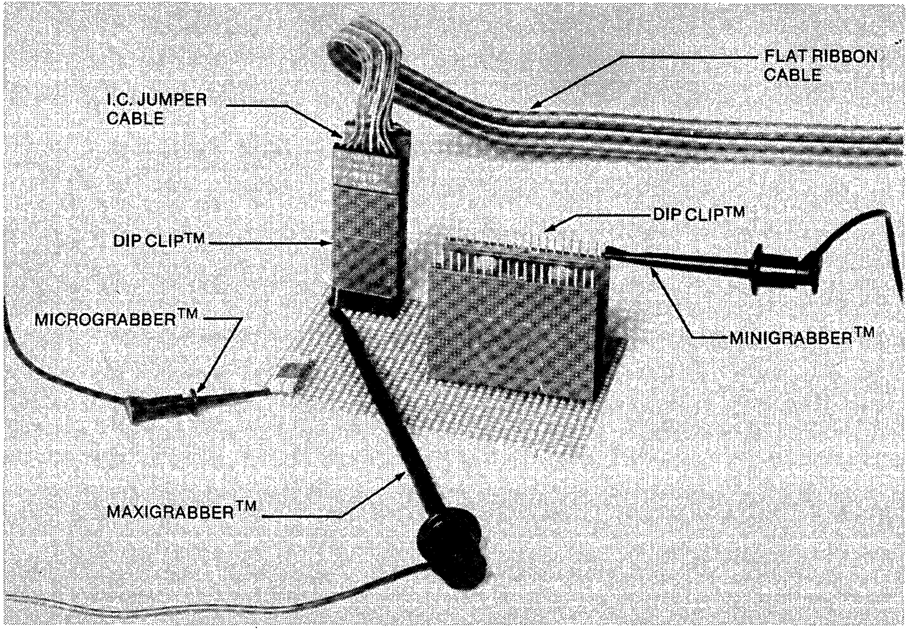
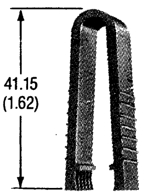
I.C. ACCESSORIES



ANTISTATIC DIP REMOVER

The dip remover is an excellent tool for the removal of dual in-line I.C. chips. With this tool accidental bending of the contacts is at a minimum.
MATERIAL: Antistatic Noryl,* black.
RATING: Heat distortion temperature @ 265 psi +93°C. (+200°F.) Max.
For I.C. dips: 8, 10, 14, 16, 18, & 20 pins.

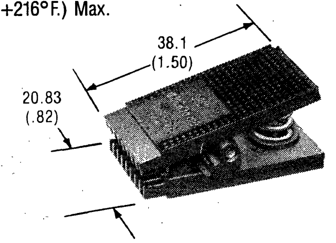


Model No.
4904

NET 1.50

14/16 PIN DUAL IN-LINE DIP REMOVER

The dip remover is an excellent tool for removal of 14/16 pin dual in-line I.C. chips. With this tool accidental bending of the contacts is at a minimum.
MATERIAL: Spring: stainless steel.
INSULATION: Glass filled nylon, red.
RATING: +102°C. (+216°F.) Max.

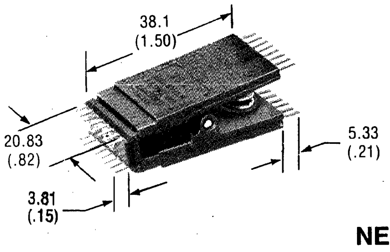


Model No.
4386

NET 4.75

14/16 PIN DUAL IN-LINE TEST CLIP WITH ATTACHED HEADER

The Dip Clip™ with attached header is an excellent tool for plugging into 14/16 pin IC sockets to test circuits. You can either solder wires directly to the top pins of the Dip Clip,™ or more convenient, you can attach the Pomona Electronics I.C. Jumper Cable 4185.
MATERIAL: Dip Clip contacts, nickel silver.
Header contacts: brass. Spring: stainless steel.
FINISH: Header contact, gold plated.
INSULATION: Dip Clip, glass filled nylon. Color, red.
RATING: 1000 VRMS, 1 Amp, +102°C. (+216°F.) Max.



Model No.
4566

NET 14.95

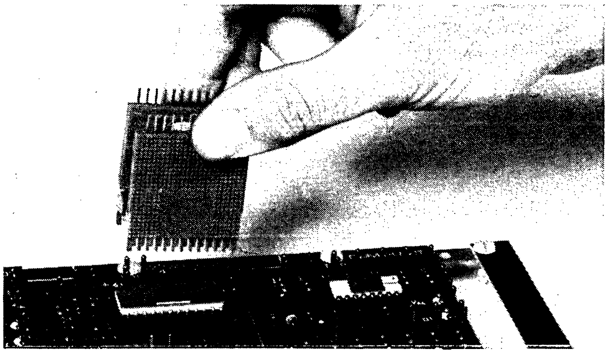
DIP CLIP™ IC TEST CLIPS

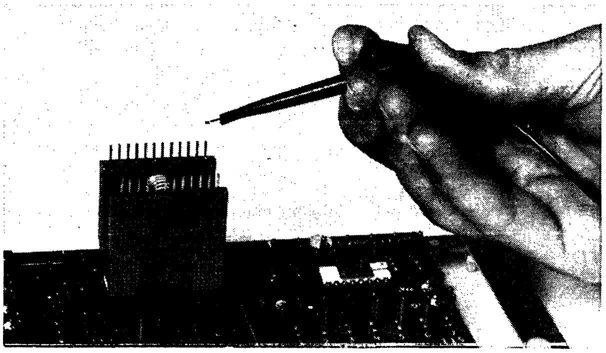
Pomona Electronics' DIP CLIP™ test clips are designed especially for testing Dual-In-Line I.C. Packages on high-density P.C. boards. The DIP CLIP™ has many built-in features that assure a positive electrical connection and at the same time provides hands-free testing. The DIP CLIP™ test clips with reduced thickness (across the contacts) are used for ultra-dense packaged clips located adjacent to each other at only 2.54 mm (.100) spacing.

DIP CLIP™ test clips are obtainable either with tarnish resistant nickel silver contacts or gold plated beryllium copper contacts. The gold plated beryllium copper contacts feature longer life and lower contact resistance.

FEATURES

- Solid tarnish resistant nickel silver contacts or beryllium copper contacts, gold plated per MIL-G-45204, Type II.
- Contacts 1.02 mm (.040) wide on lower end are serrated for good electrical connection.
- 0.64 mm (.025) square serrated test points on upper end will accept wire wraps on mini test clips.
- Molded barrier between each contact allows connections to be made on live boards without accidental shorting of adjacent contacts.
- Can be used as an insertion and removal tool for DIPS.
- Insulation: Glass-filled nylon, +102°C. (+216°F.) Max.





DIP GRIP™ IC TEST CLIP

Pomona Electronics DIP GRIP™ test clip is designed especially for testing single contacts on Dual-In-Line Package (DIP) Integrated Circuits on 2.54 mm (.100) spacing. The DIP GRIP™ assures positive electrical contact on one leg of the DIP across its 7.62 mm (.300) width and provides hands free testing.

Contact 1.02 mm (.040) wide on lower end is serrated for good electrical connection. 0.64 mm (.025) square serrated test point on upper end will accept square pin receptable patch cords such as Pomona Models: 4741, 4771, 4772, 4910, 4945, 4974, 4992, 5069 and 5070.

MATERIAL: Contact: beryllium copper. Spring: music wire.
FINISH: Contact: Gold plated.
INSULATION: Glass filled nylon,
RATING: +102°C. (+216°F.) Max.

ANTISTATIC DIP REMOVERS

These DIP removers are built of a special plastic that not only has the strength to pull the most stubborn DIP, but actually prevents electrostatic buildup. The surface resistivity controls surface charges and protects even the most sensitive of electronic circuits. This excellent design also minimizes accidental bending of contacts.

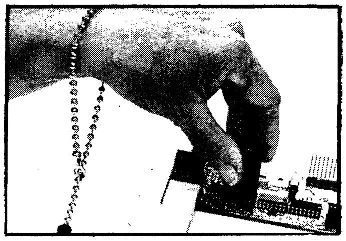
ANTISTATIC WRIST STRAP

These personnel grounding wrist straps protect even the most sensitive I.C. from accidental damage due to static electricity. The self-adjusting wrist strap (see insert) allows freedom of movement, yet is attractive and comfortable to wear. All units feature a built-in 1 megohm resistor.



REPLACEMENT WRIST STRAP

Leave the antistatic cord permanently attached to the bench and give each of your assemblers their own wrist strap. You can also use this model to replace those straps that were lost without purchasing an entire assembly. Fits Models 5027 and 5028.

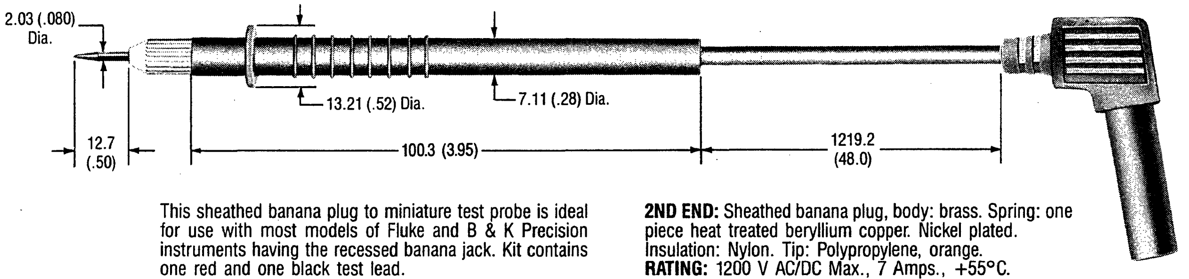
MULTIMETER REPLACEMENT TEST LEAD KIT FOR FLUKE AND B & K PRECISION METERS

NEW



This sheathed banana plug to miniature test probe is ideal for use with most models of Fluke and B & K Precision instruments having the recessed banana jack. Kit contains one red and one black test lead.

1ST END: Miniature test probe with finger guard. Chuck: brass. Replaceable needle tip: stainless steel. Insulation: Nylon. Chuck nut: nylon, white.

WIRE: 18 AWG, 65 x 36 t.c., PVC insulated, 3.66 mm (1.44) O.D.

2ND END: Sheathed banana plug, body: brass. Spring: one piece heat treated beryllium copper. Nickel plated. Insulation: Nylon. Tip: Polypropylene, orange.

RATING: 1200 V AC/DC Max., 7 Amps., +55°C. (+131°F.) Max.

(See page 37 for replacement tips).

MINIATURE SIZE TEST PROBES

These slim miniature test probes feature a sharp replaceable needle tip. The tip easily pierces varnish or plating to give a good electrical reading. The probe also has a variety of optional replaceable tips (See page 37).

TIP DETAIL

Now you can 'reach out' to get at those hard-to-reach test points with this miniature extendable test probe. The steel tip is very sharp, allowing penetration of contaminants or conformal coatings. The tip is insulated up to the point, providing protection from accidental shorting to adjacent components.

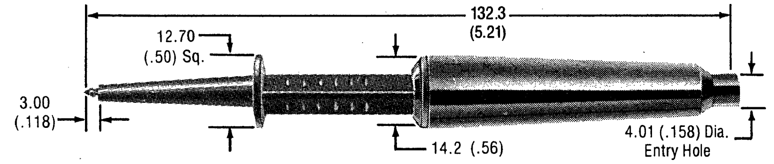
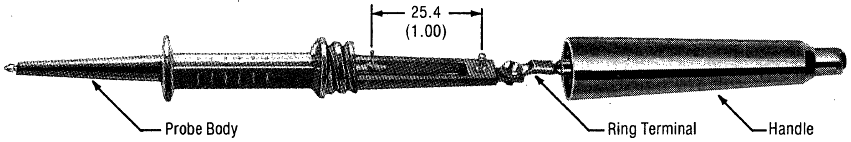
DO-IT-YOURSELF COMPONENT MOUNTING TEST PROBE





SIMPLIFIED COMPONENT INSTALLATION

- Unscrew handle from probe body.
- Thread wire through hole in handle and crimp or solder to ring terminal.
- Attach and solder component to turret terminals.
- Slip handle over component and thread handle to probe assembly.

This do-it-yourself component mounting test probe enables the user to create his own compensated probe. Discrete components, such as resistors, capacitors, filters, etc., can be soldered between the two gold plated brass solder turrets. The probe features a triangular shaped finger grip with molded finger guard and threaded handle. Nylon.

MATERIAL: Test probe tip and solder lugs, brass.
FINISH: Test probe tip, nickel plated. Solder lugs, gold plated.

INSULATION: Nylon.
RATING: 1200 V AC/DC Max., +80°C. (+176°F.) Max.

This novel design allows the probe tip to be plugged directly into a 4.22 mm (.166) dia. banana jack. Extra useful when measuring voltages/currents from various banana jacks. Banana jack in handle is sheathed to help prevent accidental shorting due to partial insertion. Allows the use of standard banana plug test leads. Finger guard molded to probe helps prevent fingers from slipping onto tip.

1ST END: 2.03 mm (.080) dia., tip with pillow spring. Tip: brass. Spring: beryllium copper. Nickel plated. Fits 4.22 mm (.166) dia. banana jacks. Insulation: Nylon.
2ND END: Banana jack, 4.22 mm (.166) dia., brass, nickel plated. Accepts standard banana plugs.
RATING: 1200 V AC/DC Max., +80°C. (+176°F.) Max.

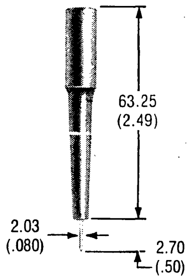
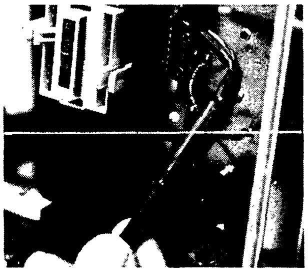
UPPER: Brass, tin plated.
INSULATION: PVC.
LOWER: Pin tip plug, 2.03 mm (.080) dia., brass, gold plated.
RATING: 2500 WVDC, 5 Amps, +50°C. (+122°F.) Max.





IC TEST TIP ADAPTER

Miniature I.C. Test Tip fits on all Pomona replaceable needle tip probes. Unthread and remove nut and needle tip, then thread the adapter on. The small size and recessed contact allows the I.C. Adapter to probe one leg of a dip chip without shorting an adjacent leg. Plastic projections on either side of the contact tip slide between the dip legs to hold adapter in place and prevent slipping.

UPPER; Brass, nickel plated.
INSULATION: Nylon, white.
LOWER: Tip, stainless steel.
RATING: +80°C. (+176°F.) Max.

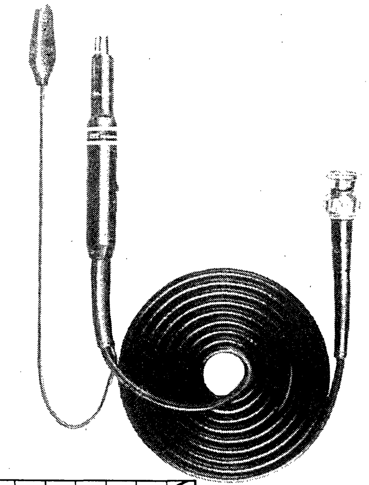
OSCILLOSCOPE PROBE KIT



SPECIFICATIONS (3 POSITION):

Position x 1

Bandwidth:	DC to 10MHz
Input Resistance:	1MΩ (oscilloscope input)
Input Capacity:	40pF. Plus oscilloscope capacity
Working Voltage:	600 Volts DC (including Peak AC)
Cable Length:	1.5 meters (4.92 ft.)

Position Ref.
Probe tip grounded via 9MΩ resistor, oscilloscope input grounded

Position x 10

Bandwidth:	DC to 100 MHz
Risetime:	3.5 nanoseconds
Input Resistance:	10MΩ when used with oscilloscopes which have 1MΩ input. (Probe resistance 9MΩ ± 1%)
Input Capacity:	11.5pF when used with oscilloscopes which have a 30pF input capacity. For other values see graph.
Compensation Range:	10-60pF
Working Voltage:	600 Volts DC (including Peak AC)

TEST LEAD HOLDER

TEST LEAD HOLDER

No need to spend time searching for a particular test lead. With these new racks, all of your patch cords and cable assemblies can be conveniently filed for instant selection — within easy reach. Holder mounts quickly on any vertical surface. Test leads are easy to store, easy to remove. Three models to choose from for different size cables.
MATERIAL: Cold rolled steel.
FINISH: Baked enamel.

Model No.	Color	Max. Cable Dia. (Dim. A)

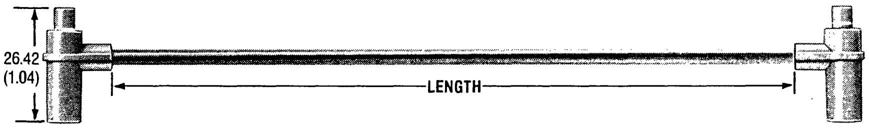
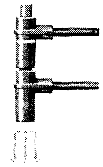
ITT POMONA ELECTRONICS

"PUSH-ON" STACKING BNC

"PUSH ON" STACKING BNC MALE BOTH ENDS

This multiple stacking patch cord connects the center conductor of only BNC jacks. Excellent for use with instruments such as oscilloscopes. Stacking feature enables a multiple number of connections to the same point.





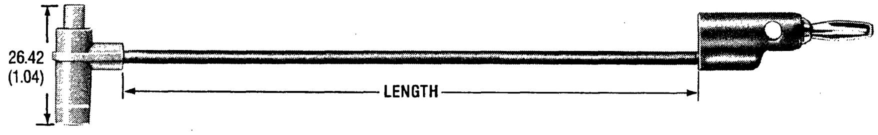
Model No.	Length	Net
3201-4 *	101.6 (4.0)	7.50
3201-12*	304.8 (12.0)	7.50
3201-36*	914.4 (36.0)	7.50
3201-60*	1524.0 (60.0)	7.90

1ST END: Push-on stacking BNC male. Contact, one piece heat treated beryllium copper, gold plated. Insulation: Polypropylene.
WIRE: 18 AWG, 65 x 36 t.c., PVC insulated, 3.66 mm (.144) O.D.
2ND END: Same as first end.
RATING: 500 VRMS, +55°C. (+131°F.) Max.

***COLORS AVAILABLE:** -0 Black, -2 Red.

"PUSH ON" STACKING BNC MALE TO STACKING BANANA PLUG

This multiple stacking patch cord connects the center conductor of only BNC jacks. Excellent for use with instruments such as oscilloscopes. Stacking feature enables a multiple number of connections to the same point.



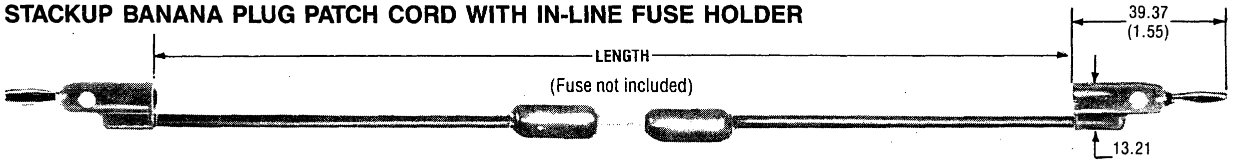
Model No.	Length	Net
3202-18*	457.2 (18.0)	5.50
3202-36*	914.4 (36.0)	5.50
3202-60*	1524.0 (60.0)	5.90

1ST END: Push-on stacking BNC male. Contact, one piece heat treated beryllium copper, gold plated. Insulation: Polypropylene.
WIRE: 18 AWG, 65 x 36 t.c., PVC insulated, 3.66 mm (.144) O.D.
2ND END: Stackup banana plug. Body: brass. Spring: one piece heat treated beryllium copper. Nickel plated. Fits standard 4.22 mm (.166) banana jacks. Banana jack accepts standard banana plugs. Insulation: Polypropylene.
RATING: 500 VRMS, +55°C. (+131°F.) Max.

***COLORS AVAILABLE:** -0 Black, -2 Red.

TEST LEADS & PATCH CORDS

STACKUP BANANA PLUG PATCH CORD WITH IN-LINE FUSE HOLDER



This molded in-line fuse holder patch cord is used as an added safety feature for your electronic test equipment. Fuse holder will accept 6.35 mm (.25) dia. SFE and AGC fuses (fuse not included.)

Model No.	Length	Net
4274-12*	304.8 (12.0)	5.50

ITT POMONA ELECTRONICS

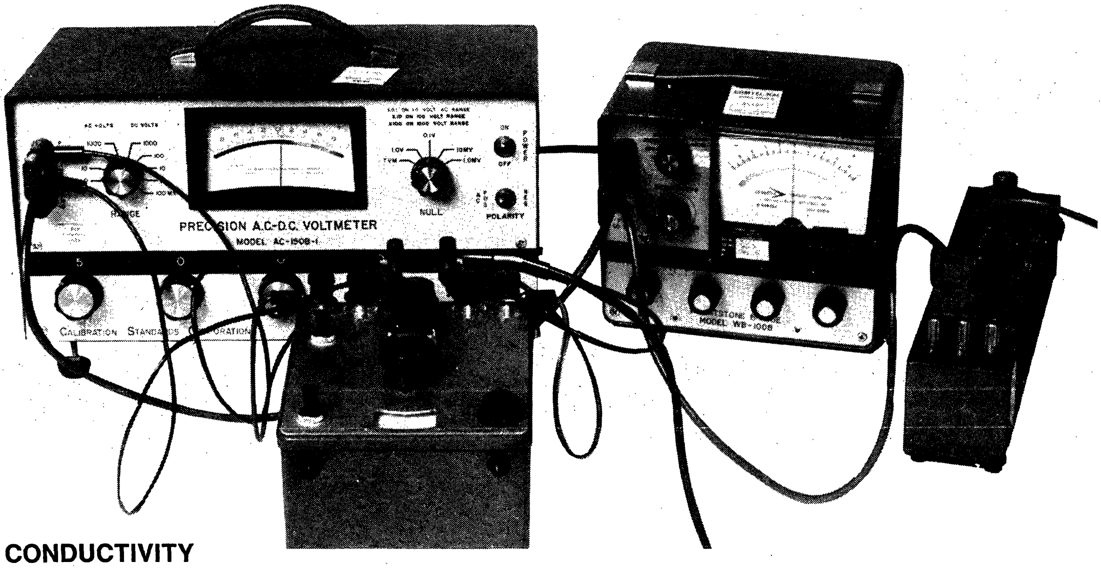
LOW THERMAL E.M.F. SPADE LUG JUMPERS



PRECISION A.C.-D.C. VOLTMETER
MODEL AC-1508-1
CALIBRATION STANDARDS CORPORATION
MODEL WB-1008

HIGH CONDUCTIVITY ETP COPPER, ALLOY 110 LEADS FOR PRECISION MEASUREMENTS

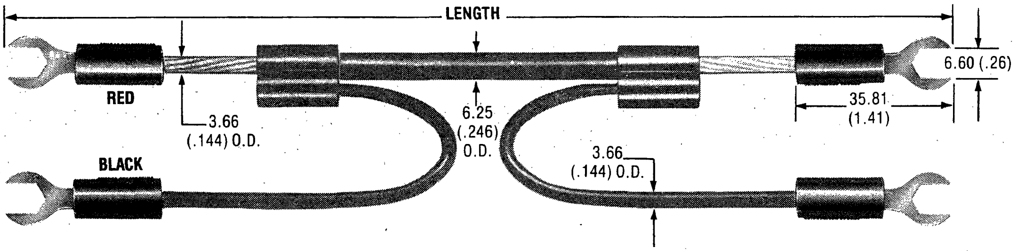
Pomona Electronics offers products for use in measurements when thermoelectric effects are significant sources of error. Comparators designed for use with the Kelvin-Varley voltage divider and microvolt leads were tested with primary standards laboratory equipment.

Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

Thermoelectric properties — High Conductivity ETP Copper, Alloy 110 gold plated spade lugs cold-staked to multi-stranded 12 gauge copper wire minimize thermoelectric effects — an absolute necessity for low voltage, high precision measurements.

Low resistance — 12 gauge multi-stranded copper wire results in extremely low cable resistance. Spade lugs plated with 15 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts (less than 0.01 μV/°C).

HIGH CONDUCTIVITY ETP COPPER, ALLOY 110 SPADE LUGS, SHIELDED LEAD



Model No.	Length
1756-24	609.6 (24.0)
1756-48	1219.2 (48.0)

Designed for use with Kelvin-Varley voltage dividers where extreme precision is required for low voltage measurements. Features guard shield to effectively reduce shunt resistance.

1ST END: Spade lug. High conductivity ETP copper, Alloy 110, gold plated. Insulation: Polypropylene, one black and one red. Lead: 18 AWG, 65 x 36 t.c., PVC insulated, 3.66 mm (.144) O.D. Color: Black.

WIRE: 12 AWG, 7 x 38/36 bare copper, polyethylene insulation. Braid shield bare copper, PVC jacket. 6.25 mm (.246) O.D. per MIL-C-17/2A. Color: Black.
2ND END: Same as first end.
RATING: +55°C. (+131°F.) Max.

ITT POMONA ELECTRONICS

MOLDED BREAKOUTS

A series of "breakouts" designed to convert standard coaxial cables to test cables. By connecting proper breakout receptacle or plug to corresponding cable plug or receptacle, any standard coaxial cable becomes a test cable. All connections feature a tarnish resistant finish and black polypropylene molded to connector and wire.

CABLE ASSEMBLIES

STRESS-RELIEVED/WEATHERPROOFED CABLE ASSEMBLIES

The following cable assemblies with molded boot feature extra-long, stress-relieved PVC molded directly onto cable jacket and connector body. The advantages are stress protection against failure from excess bending, flexing & twisting and a weatherproof seal between cable and connector.

BNC MALE BOTH ENDS WITH STRESS RELIEF BOOT

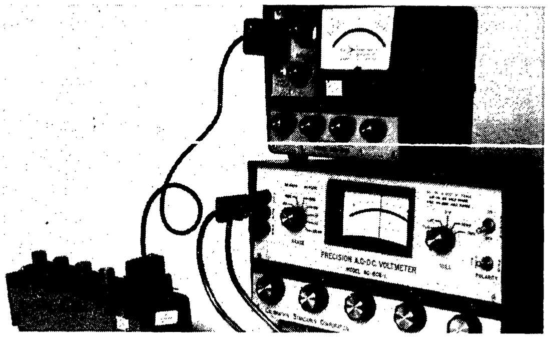
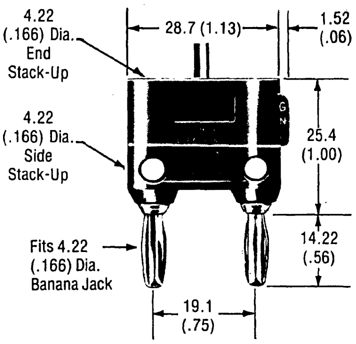
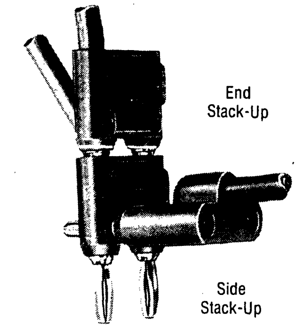
19.05 mm (.750) DOUBLE BANANA PLUG PATCH CORDS







These patch cords are indispensable for bridge transformer connection, three terminal capacitor measurements and general hookup for two wire system. Parallel connections can be made in side or end stackup.

FEATURES:

- Rounded spring design results in maximum contact area.
- GND., clearly molded on plug body and shell.
- Solder-bonded noise-free connections.

SPECIFICATIONS:

- Spring: one piece heat-treated beryllium copper, berylco 25 per QQ-C-533.
- Plug body; brass per QQ-B-626, alloy 360.
- Nickel plated per QQ-N-290, Class 2.

STANDARD DOUBLE PLUG BOTH ENDS

1ST END: Double banana plug. Body: brass. Spring: one piece heat treated beryllium copper. Nickel plated. Fits standard 4.22 mm (.166) dia. banana jacks. Double banana jack accepts standard banana plugs. Insulation: Polyethylene, black.
CABLE: Two cond. twisted pair 6.35 mm (.250) O.D. Shielded mic. 4.95 mm (.195) O.D. RG 58 C/U 4.95 mm (.195) O.D. RG 59 B/U 6.15 mm (.242) O.D.
2ND END: Same as first end.

TUBE TEST SOCKET ADAPTERS & SOCKET SAVER® ADAPTERS

TEST SOCKET TUBE ADAPTERS

Ideal for making measurements of voltage, resistance, audio and video without tracing complicated circuits from the bottom of the chassis. They feature: Extended test tabs for easy use with either alligator or test prods; low loss mica-filled molded phenolic construction per MIL-M-14, MFE. Power factor less than 0.010 at 10 MHz; high insulation resistance, the I.R. exceeds 500,000 megohms at 40% R.H., at 24°C; distributed capacity, inter-element approximately 1 pico farad; high voltage operation, voltage breakdown elements exceeds 1,700 VAC or DC. Models 1779 and TV-12 molded of electrical grade black phenolic. Model TVS-8 has 2.36 mm (.093) dia. pins. All other models have 1.02 mm (.040) dia. pins.

Model No.	Type	Size H x Dia.	Pin Circle Dia.	Net

MODEL 1779

TALL TEST SOCKET TUBE ADAPTERS (For sockets having captive or telescoping tube shields)

- Extra height — clears shields.
- Ready access to socket connections.
- Exposed operation saves time.
- Pins 1.02 mm (.040) dia.

These adapters rise above the shield and place testing in the open. Shields or tuner covers do not have to be removed. All construction is the highest quality. Inter-element distributed capacity is approximately 1.5 pico farad. Voltage breakdown elements exceed 1800 VAC or DC.

Model No.	Type	Size H x Dia.	Pin Circle Dia.	Net

SOCKET SAVER® ADAPTERS

The Socket Saver® Adapter is designed to be installed on tube checkers and other electronic equipment to prevent wear and tear of sockets on original equipment. They are easy to install and remove. This eliminates the necessity of replacing and rewiring sockets on original equipment. Built of quality materials. Beryllium copper long life contacts to give maximum service. Models 1847 and 1849 are miniaturized for use in applications where vertical height is restricted.

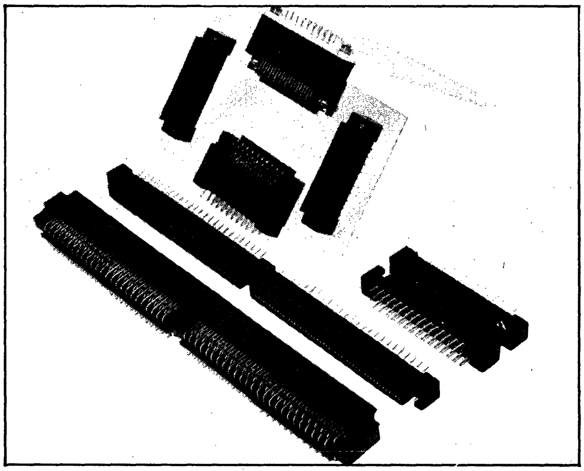
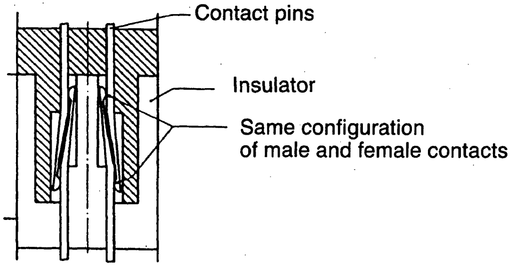
8800 .050 c/c



NEW PRODUCT

CROSS SECTION



8800 SERIES CONNECTOR SPECIFICATION

How To Order

8800-XXX-170X A –Receptacle
8810-XXX-170X A –Plug

- A: Plating (See page 2)
- X: L: Right angle leg
  S: Straight leg
- XXX: No. of contact
  - 030: 30 pins
  - 040: 40 pins
  - 050: 50 pins
  - 060: 60 pins
- 8810: Series—See mating recommendations for ordering with & without mounting flanges.

MATERIAL

Insulator: Glass filled Nylon (UL94V-O)
Color Black
Contacts: Copper alloy, Gold plating
over Nickel

SPECIFICATIONS

Current rating: 0.5A Individual contact
Contact resistance: 25 ohms Max.
Withstanding voltage: 650V AC
Insulation resistance: 1000M ohms Min. at 500V DC
Operating temperature: −55°C ∼ +85°C
Total insertion force
Less than 2.9 Kg/30 pins
Less than 3.8 Kg/40 pins
Less than 4.8 Kg/50 pins
Less than 5.7 Kg/60 pins

Mating examples between 8800 & 8810

Mating recommendations

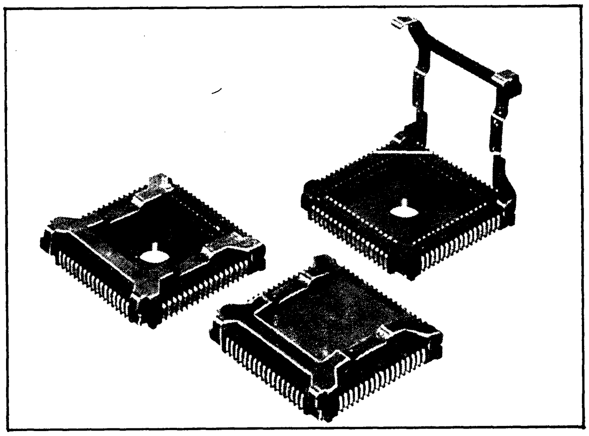
Receptacle	Plug	Mounting type
8800	8810	with flange
8801	8811	with flange includes metal pins to hold conn. on the PCB
8802	8812	without flange

KEL-AM, INC. • 1-800-233-2001 (Nat'l. Sales) • 1-800-221-1059 (East. Reg. Sales)

LCC-01 .050 cc

NEW PRODUCT

LEADLESS CHIP CARRIER



FEATURES

- *Low profile*
- *Conforms to JEDEC type A requirements*
- *Compact design*
- *Open-hinged cover for easy testing and replacement.*

SPECIFICATIONS

Contact Resistance: 30mΩ max.
Insulation Resistance: 1000MΩ min. 500V DC
Dielectric Withstanding Voltage: 500V AC

MATERIAL

Contact: Copper Alloy
Insulator: Polyphenylene Sulfide (PPS).

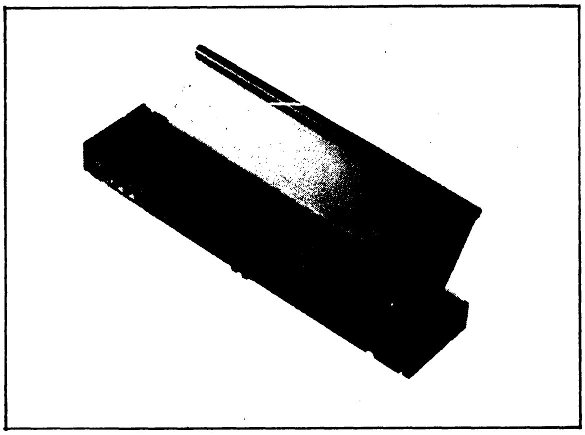
6230 .100 c/c



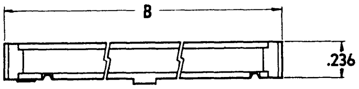
I.D.C. CONNECTOR (SOCKET) WITH PULL TAB

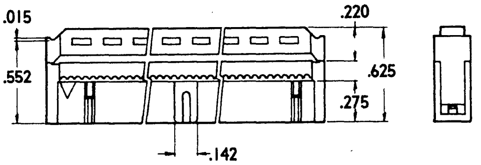
SPECIFICATIONS
Socket Accepts: 28AWG Standard Wire
Current Rating: 1A
Contact Resistance: 16mΩ max.
Insulation Resistance: 1000MΩ min. 500V DC
Dielectric Withstanding Voltage: 800 V AC

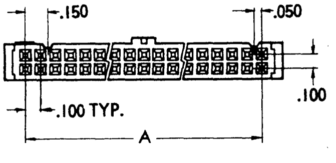
MATERIAL
Insulator: Glass-filled P.B.T. (UL84V-O)
Contact: Be Cu
Contact Finish: Gold plating over Nickel

PART NUMBER
6230-XXX-601 (Receptacle)

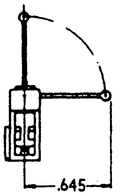
- 601 — Contact plating (See page 2)
- XXX — No. of contact: 010, 014, 016, 020, 026, 030, 034, 040, 050, 060
- 6230 — Series







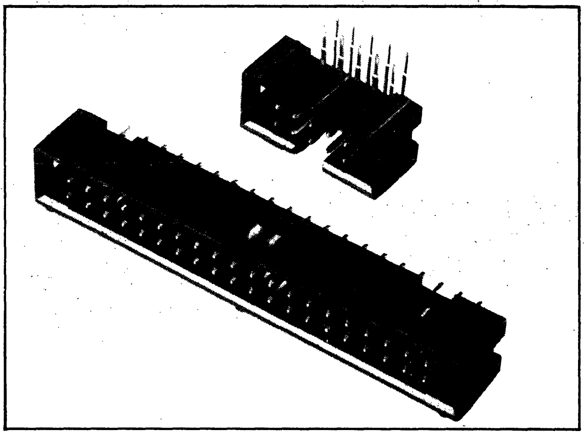
*The pull tab should be used when the mating header is a 6201 series without latches or a 6231 series header.
The pull tab is the only way to disengage the Socket from such a header.



KEL-AM, INC. • 1-800-233-2001 (Nat'l. Sales) • 1-800-221-1059 (East. Reg. Sales)

6231 .100 c/c

These box headers accept KEL-AM 6200 and 6230 series ribbon cable sockets and meet the requirements of MIL-C-83503. These headers accept the same polarizing keys as KEL-AM 6201 series headers. These headers are basically identical to the 6201 series except they have no ejector latches and are smaller in size.



FEATURES

- Ten sizes.
- PBT (polyester) body, color black.
- Copper Alloy contacts
- Plating: gold over Ni (tails have bright tin terminals)
- Shrouded contacts
- Occupies min. "real estate."

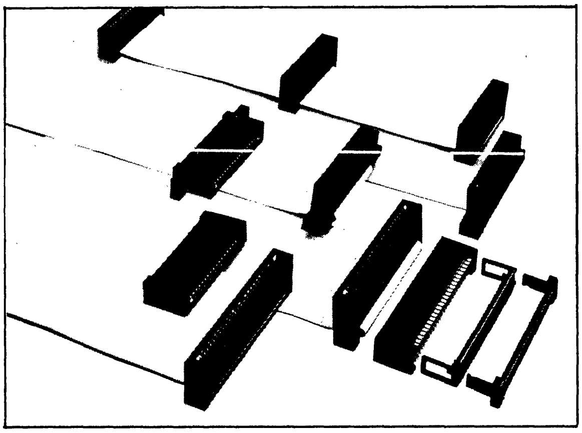
6300 .100 c/c



These receptacles mate with 1/16 inch edge card PC boards. Select the size cable required (number of conductors). See "Tooling" for ribbon cable seating tools. These ribbon cable receptacles are directly interchangeable with those of most major manufacturers. Note that pin 1 is reversed from pin 1 on RF series.

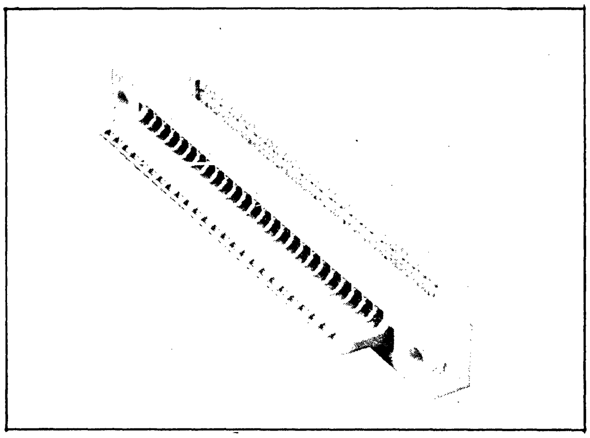
PF .100 c/c



Pluggem™ Ribbon Cable Plug Connectors mate with KEL-AM RC and RF receptacle connectors. Select the size cable required, (Number of conductors and gage of the conductors). If, as an example, your ribbon cable has (40) #28 AWG conductors, order a PF20-2852-0 or -5 plug. KEL-AM PF plugs cannot be terminated to ribbon cable without using fixture (See tooling). See page 2 for information on polarizing key slot if required.

Contact material: Phosphor Bronze

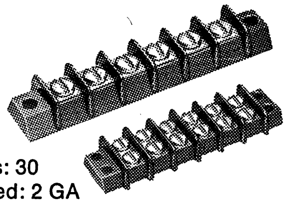
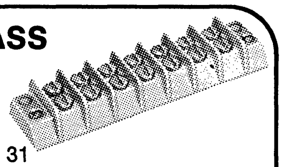
Kulka TERMINAL BOARDS, BLOCKS & STRIPS

FLAT MOUNT THERMOSET



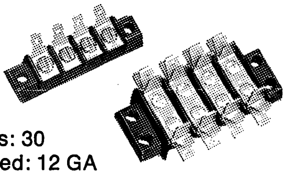
Current range: up to 90 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 30
Maximum wire size accommodated: 2 GA
Hardware: variations as needed, including wire wrap

MILITARY & NAVY CLASS



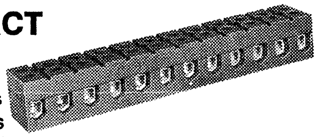
Current range: up to 50 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 31
Hardware: variations as needed
Molding materials: MAI-60, SDG-F or GDI-30F in accordance with MIL-M-14

KLIPTITE™ QUICK CONNECT



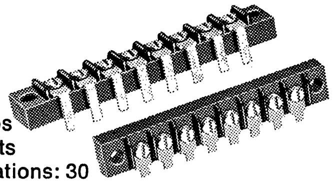
Maximum number of terminations: 30
Maximum wire size accommodated: 12 GA
Hardware: available in multiple configurations
Molding materials: thermoset or thermoplastic

PRESSURE CONTACT



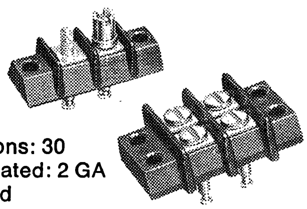
Current range: up to 85 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 12
Maximum wire size accommodated: 6 GA
Hardware: screw type
Molding materials: thermoset

PC MOUNT THERMOSET



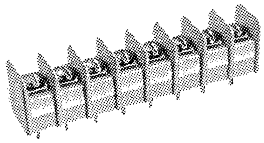
Current range: up to 20 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 30
Maximum wire size accommodated: 14 GA
Hardware: variations as needed

STUD & TURRET



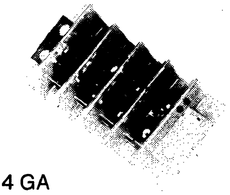
Current range: up to 90 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 30
Maximum wire size accommodated: 2 GA
Hardware: variations as needed
Molding materials: thermoset

PC MOUNT THERMOPLASTIC



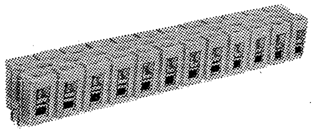
Current range: up to 20 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 25
Maximum wire size accommodated: 14 GA
Hardware: variations as needed

FLAT MOUNT THERMOPLASTIC



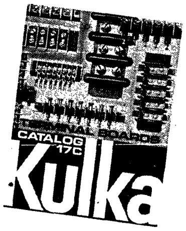
Current range: up to 20 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 20
Maximum wire size accommodated: 14 GA
Hardware: variations as needed, including wire wrap

Hi-Lo™



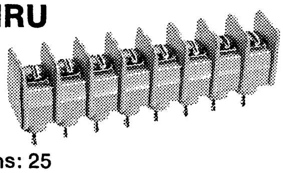
Current range: up to 50 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 24
Maximum wire size accommodated: AWG #8
Hardware: screw type clamp, P.C., wire wrap
Molding materials: thermoplastic

CATALOG & DESIGN MANUAL



Kulka's catalog contains drawings, dimensions and application criteria in conjunction with data on related components and overall terminal block configurations. Send for your free copy today.

INSULATED FEED-THRU THERMOPLASTIC



Current range: up to 20 amps
Rated voltage: up to 600 volts
Maximum number of terminations: 25

MOLDING MATERIALS AVAILABLE

The table below is compiled from various sources and is presented to facilitate comparison between the various materials. Values given are average and are not to be considered as absolute values.

Material	Description
General purpose phenolic	An economical material with good appearance, good electrical properties and well-balanced physical properties (94V-0).
Cellulose filled phenolic (CFG)	An economical material with good appearance, good electrical properties and well-balanced physical properties.
Mica filled phenolic (MFE)	Recommended for applications requiring low power factor, low loss, high resistivity and low water absorption. Comparatively fragile.
Diallyl phthalate mineral filled (MDG)	Provides dependable performance under adverse temperature and humidity conditions. Excellent electrical characteristics. Low impact strength.
Glass fiber filled phenolic (MFE)	Has the superior electrical properties of mica-filled phenolic (Type MFE) in addition to high strength and heat resistance.
Melmine mineral filled (MME)	Excellent dielectric properties with high arc and flame resistance. Excellent for airborne electronic equipment.
Alkyd glass fiber filled (MAI-60)	For applications requiring high strength and good electrical properties. After prolonged exposure to high humidity, there is a reduction of insulation resistance.
Diallyl phthalate long glass fiber filled (GDI-30F)	Good strength characteristics combined with physical stability and good electrical properties. Retains high insulation resistance after prolonged exposure to humidity. GDI-30F is flame-resistant and self-extinguishing.
Diallyl phthalate short glass fiber filled (SDGF)	Has good electrical properties of GDI-30F in addition to moldability, especially in thin-walled and/or deep section.

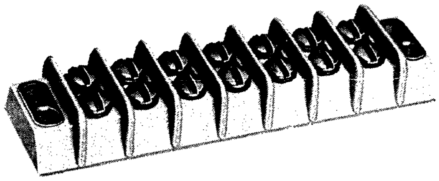
Kulka®

MILITARY & NAVY CLASS TERMINAL BOARDS

MILITARY CLASS: CLOSED BACK

These military boards feature molded-in terminals in an improved Kulka design for greater strength and flexibility. The mounting holes are covered with molded-in reinforcement straddle plates. The boards can be supplied with Sems or other types of special screws. They come in 3 sizes, Class 37TB through Class 39TB.



MIL-T-55164 Class No.	Current Rating Amps.	**Dielectric With standing Voltage (Test) Volts RMS	Maximum No. of Terminals	Type of Terminal	Terminal Screw Size	Commercial Equivalent, Interchangeable with Standard Kulka Series
37TB	15	3000	31	Screw	5-40x.219	670
40TB	7½	3000	31	Feed thru	5-40x.219	670-YSY

NOTES:

Molded material is MAI-60 in accordance with MIL-M-14.

*Description:
SR = single row DR = double row DRL = double row linked
SRTC = single row through connection

[2] Application sets are as follows:
- Set A – These terminal boards are intended for use in equipment where the effect of a short circuit is limited to the terminal board and where normal operation powers up to 50 watts are involved.
- Set B – These terminal boards are intended for use where secondary short circuit protection in the form of fuses, circuit breakers and other parts are provided in the circuit, and where normal operating power does not exceed 2000 watts per terminal.
- Set C – These terminal boards are for power applications in excess of 2000 watts (per terminal) but still protected by secondary devices in the circuit which can safely interrupt resultant short circuit currents.

[3] The stud connector for these terminal boards is considered part of the stud and is required, unless otherwise specified. With the stud connector removed, the terminal board will provide twice the number of connection points and allow for an additional wire per terminal; however, the application set will be reduced as shown.

[4] The designation plate shall be supplied with the terminal board unless otherwise specified.

Kulka

Kulka's pressure-contact terminal blocks are designed for heavy-duty applications. They are ideal for control cabinets, industrial air conditioners, electronic power equipment and other high voltage and heavy amperage use. These blocks feature a dead front, one-piece construction with a tubular screw that provides a vise-like grip on each wire of the through-connected pairs, eliminating soldering. They are available in lengths from 2 to 12 terminals or can easily be field cut. They are UL recognized.

KLIPTITE™ QUICK CONNECT

Kulka's Kliptite™ terminal boards, which accept standard female wire terminals, feature self-locking, quick-connect tabs. This feature is ideal for vending machines, appliances, or any application that requires a positive, yet quick disconnect termination. Kliptite tabs are available riveted to the board or assembled with screws. All of Kulka's Kliptite terminal boards are UL recognized and CSA certified.

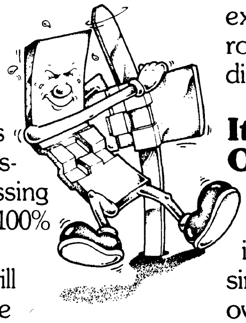
THE LEAR SIEGLER INTERPIN BUSSING PLAN.

Here's one bussing solution that nearly everyone's in favor of. Lear Siegler Pin Bars. Pin Bar products are narrow, coated metal alloy strips that are machined to your exact specifications. They grasp and connect common-spaced pins in electronic chassis better and faster than any other method known.

Iron-Clad, Gas-Tight Connections.

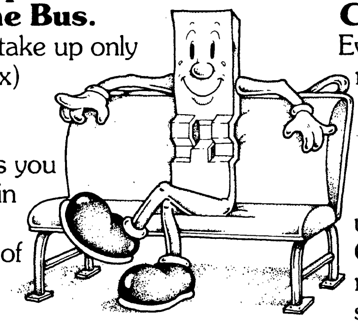


Pin Bars grip each pin with three times greater contact pressure than other bussing products, assuring 100% reliable gas-tight terminations that will outlast the life of the chassis.

With twice the gas-tight contact area and more uniform pressure, you reduce contact resistance, IR losses, heat, and electrical noise.

Performance is so high that it exceeds the tough specifications of MIL-STD-202 "D" for resistance to corrosion, thermal and mechanical shock, and vibration. It's so good that performance continuity checks aren't even necessary.

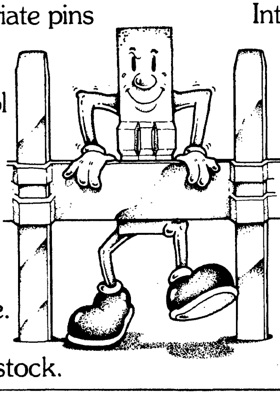
More Space When You Ride the Bus.



Pin Bars take up only ¼ in. (max) space on each pin. This gives you greater pin exposure and a lot of extra room for discrete and harness wiring.

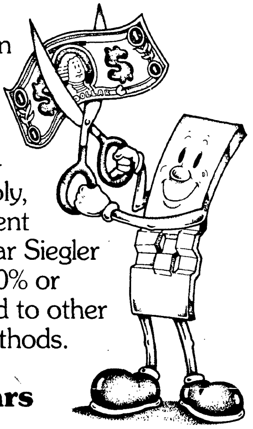
It's Simple To Assemble Our Pin Bars

Minimum skills are all that's required to make fool-proof terminations. Your assemblers simply place the metal strips over the appropriate pins and push down.



A remarkably simple $15.00 tool enables you to turn out up to thousands of terminations per minute. No wire preparation. No tool maintenance. No capital equipment. No bulky stock.

Pin Bars Can Cut Bussing Costs.



Everybody knows it's cheaper to ride the bus! Pin Bar connections cost as little as 4 cents per termination, depending on volume and usage. Considering reliability, non-skilled assembly, and more efficient production, Lear Siegler can save you 40% or more compared to other termination methods.

Free Pin Bars Available.

Interested? Free sample Pin Bars, complete specifications, and answers to questions engineers and manufacturing supervisors ask most are available. Simply contact Pin Bar Products, Lear Siegler, Inc., 714 North Brookhurst Street, Anaheim, CA 92803. Phone: (714) 774-1010.

LEMO Electronic Connectors

The following 10 pages represent an overview of LEMO's product line. For more details, complete catalogs and information on local representatives, please contact LEMO U.S.A. at (707) 578-8811.

RELIABILITY: Positive locking mechanism and gold plated contacts assure consistent signal transmission to 1.5 GHz.

Quick-Lok mechanism assures secure contact by audible click when lock is engaged. Color coding is available too.

SPACE SAVINGS: Only finger clearance needed to engage and disengage connectors. No need to twist or turn locking ring.

RUGGEDNESS: Connector components are precision machined. Locking mechanism is totally protected by outer shell, virtually eliminating accidental disconnections and damage to locking mechanism, cables and contacts.

SPEED: Connectors engage and disengage simply and quickly by pushing and pulling axially on the outer shell of the plug.

AESTHETIC-FUNCTIONAL DESIGN: Outer shell and back nut finished with matte chrome plating. Contacts are gold plated. LEMO connectors will complement any front panel application.

The LEMO Choices

LEMO manufactures a complete line of high quality connectors specifically engineered and designed for a wide variety of applications.

S SERIES: LEMO's S Series has the widest choice of shell sizes. Proper connection is assured by hermaphroditic insulator and contact configuration.
Range of contact configuration: Single contact; coaxial; triaxial; multiple contact; mixed (coaxial and multiple or high voltage and multiple); and high voltage versions.
Range of cable outer diameter: .059″ to 1.188″/1.5mm to 30.2mm.
Range of contacts: 1 to 106.
S Series is also available in sealed version for special applications.

B SERIES: LEMO's B Series offers greater ruggedness, greater contact density, keying pattern for contact exclusivity, all-male contacts in plug; all-female contacts in receptacle; choice of crimp or solder contacts and color-coded bend reliefs.
Range of contact configuration: Multiple and mixed (coaxial and multiple or high voltage multiple).
Range of cable outer diameter: .083″ to .986″/2.1mm to 25.3mm.
Range of contacts: 2 to 64.

SPECIAL COAXIAL SERIES: LEMO has developed a wide range of coaxial connectors to meet most applications.
01-MINAX Series: LEMO's smallest coaxial connector accommodates cable sizes RG.196A/U, RG.178B/U and RG.174A/U.
00-NIM (Nuclear Instrumentation Module) - CAMAC (Computer Automated Measurement and Control) Series: Designed for cables RG.174A/U, RG.188A/U and RG.316/U.
OA-Telecommunications Series: Designed with contacts to accommodate telecommunications requirements in mind. These accommodate cables RG.58C/U, RG.174A/U.
Other Coaxial Connectors are available in S Series to accommodate cables up to .874″/22.2mm.

TRIAXIAL SERIES: LEMO's triaxial series is used mainly for video camera applications. LEMO has a number of standard connectors in this series and is in the forefront of developing new ones to meet clients' needs.

COMPACT 2C SERIES: LEMO's 2C Series is specially designed for applications where space is critical. It features shorter length shells and contacts.
Range of contact configuration: Multi contact only.
Range of cable outer diameter: .106″ to .314″/2.7mm to 8.1mm.
Range of contacts: 2 to 14.

ENVIRONMENTAL E SERIES: LEMO's E Series is dust and splash down water resistant. Proper connection is assured by hermaphroditic mating.
Range of contact configuration: Single contact, coaxial, triaxial, multiple and mixed (coaxial and multiple or high voltage and multiple).
Range of cable outer diameter: .047″ to 1.070″/1.2mm to 27.2mm.
Range of contacts: 1 to 106.

THERMOCOUPLE SERIES: LEMO's Thermocouple connectors are designed to assure continuous and accurate monitoring of hostile environments where extreme surface or ambient temperatures, gases or liquids must be controlled.

HIGH VOLTAGE SERIES: Originally developed for CERN nuclear facility in Switzerland, LEMO's High Voltage Series is designed for applications where there is a constant non-fluctuating flow of electricity and where power can be cut prior to connecting and disconnecting connector.
Range of contact configuration: Single contact only.
Range of cable: AWG 18 and 12/1.2mm and 2.5mm.

RP, RPL SERIES: This Series is specially designed for use on Printed Circuit Boards.

SPECIAL ORDERS: LEMO welcomes the opportunity to consider development of connectors to meet your requirements. Many of our present connectors were created through client requests.

SALES AND SERVICE
LEMO connectors are manufactured in Switzerland. North American inventory and sales headquarters are in Santa Rosa, California. Sales and service are available through a network of representatives or directly from LEMO U.S.A., in Santa Rosa, California.

LEMO USA INC

P.O. Box 11488, Santa Rosa, CA 95406

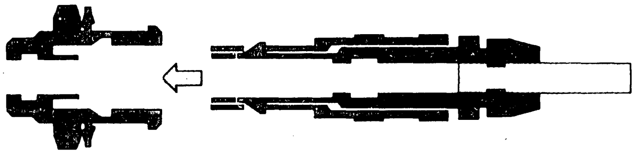
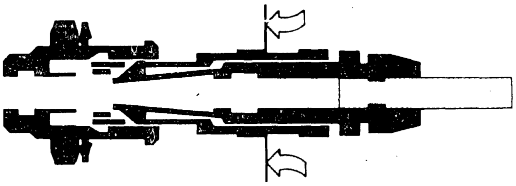
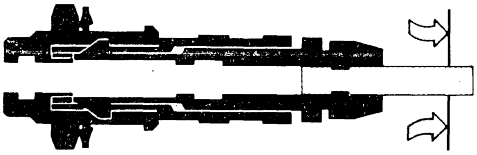
Quality Construction



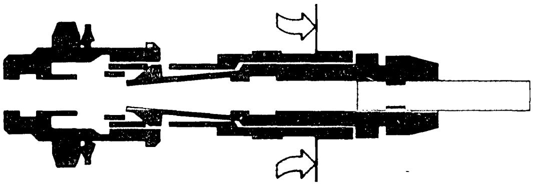
Connection is made simply by pushing plug directly into receptacle. An audible click is heard assuring lock is engaged.



The self-latching system assures the connector to be mated by simply pushing the plug axially into the receptacle.



Connection remains intact resisting stresses of pulling on the cable and any other component part except the outer shell.



When required, the connection is disengaged by a single straight axial pull on the outer shell.

Components	Material	Surface Treatment in microns(*)			
		Copper min.	Nickel min.	Chrome min.	Gold min.
Outer shell and collet nut	Brass ASTM C385	0.5	3	0.3	-

rd = 100 erg absorbed in a 1 g of material = 10^{-5} Ws/g

OPTIONS:

Materials: LEMO can provide alternate compatible materials (stainless steel, aluminum, etc.)

Surface treatment: Custom finishes such as black, green chrome plating and anodizing can be supplied.

Insulator materials: Other insulator materials to meet specific needs can be supplied.

Before specifying special features, please contact your local representative or LEMO U.S.A. Inc. for more information on how we can meet your specific requirements.

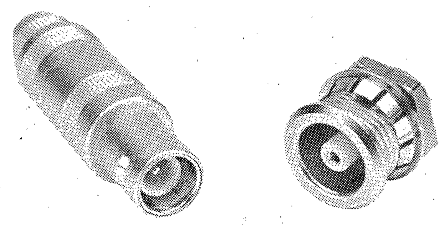
Receptacles—Plugs—NIM-CAMAC

MINIATURE COAXIAL SERIES

NIM-CAMAC (Miniature Coaxial) 00 Series, 50 Ohms



This series is designed to meet the specifications of CD/N549 Norm

Mechanical Properties:
Outer Shell: Brass 59A
Insulator: Teflon
Contacts: Brass with high modulus of elasticity. Low and constant resistance. With copper flash, 3 microns nickel, 1.5 microns gold
Working Temperature: −250°C + 260°C (−410°F + 500°F)

Electrical Properties:

Impedance: 50 ohms ± 2%	Contact Resistance: <8mΩ
Frequency: over 1 GHz	Insulator Resistance: >10^{12}Ω
Max. Wave Resistance: 1 to 1.2 GHz	Working Voltage: 1000 Vdc
	Test Voltage: 3000 Vdc

Recommended Cables: RG.174A/U, RG.188A/U, RG.316/U, RG.58C/U, RG.178B/U, RG.187A/U, RG.196A/U.

Collet Sizes Available:

MM. 1.5 In. .059	1.7 .066	2.2 .086	2.7 .106	2.9 .114	3.1 MM. .122 In.	5.2 .204

Options: Alternative compatible insulators can be supplied. Before specifying other materials please contact your representative or LEMO for information.

Cable bend reliefs can be supplied for crimped type cables as follows:
FOOS195N for cables up to 2.7mm (.106″) O.D.
FOOS196N for cables up to 3.1mm (.122″) O.D.
FOOS197N for cables up to 3.5mm (.138″) O.D.

Part numbers are for black strain reliefs. If other colors are required, please replace suffix "N" by proper color code.

B Series Inserts— Multi Contact and Mixed Contact Connectors

MULTI-CONTACT INSERTS

Contact types:

- C = solder contact (standard version)
- S = crimp contact
- P = printed circuit contact

Wire sizes in this table are valid for solder-type contacts (standard version). For crimp contacts please contact LEMO.

Number of Contacts	Contact Types Available	Wire Max	Working Voltage		Amps	Shell Size
		AWG	AC	DC		
2	C S P	21	460	660	10	0
3	C S P	21	420	600	8	
4	C S	24	460	660	7

PROCEDURE FOR DETERMINING TEST VOLTAGES AND WORKING VOLTAGES FOR LEMO CONNECTORS:

Test Voltage: Test voltages are determined by taking an average of the point at which arcing occurred and reducing it by ⅓.
Working Voltage: Working voltages are determined by taking test voltages and reducing them further by ⅔.

LEMO guarantees the proper functioning of the connector at working voltages.

Although this may appear quite conservative, it is in keeping with LEMO's insistence on assuring proper functioning and maintenance of high-quality standards.

PROCEDURE FOR DETERMINING TEST VOLTAGES AND WORKING VOLTAGES FOR LEMO CONNECTORS:

Test Voltage: Test voltages are determined by taking an average of the point at which arcing occurred and reducing it by ⅓.

Working Voltage: Working voltages are determined by taking test voltages and reducing them further by ⅔.

LEMO guarantees the proper functioning of the connector at working voltages.

Although this may appear quite conservative, it is in keeping with LEMO's insistence on assuring proper functioning and maintenance of high-quality standards.

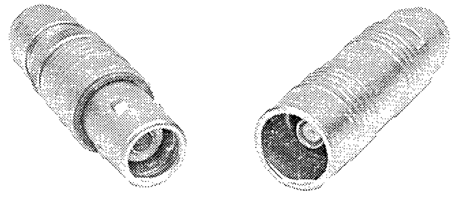
Specifications are based on Teflon insulators. For other insulators contact LEMO.

LEMO USA INC

P.O. Box 11488, Santa Rosa, CA 95406
(707) 578-8811, Telex 340-933 (LEMO USA SARO)

Special Applications

VIDEO TRIAX 4A (American) SERIES



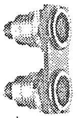
Technical Characteristics:
Nominal impedance: 75 ohms
Operating frequency: 2.5 GHz
VSWR: 1.01 + 0.076f[GHz]
Insertion loss: <0.4 dB
Contact resistance: center contacts <3mμ
internal ground <1mμ
Breakdown voltage: center contact/internal ground: 4KVrms
internal/external ground: 9.5kVrms
Operating temperatures: −50°C + 260°C (−58°F + 500°F).
Connector retention force, engaged: min. 28N
Cable retention force: min. 500N

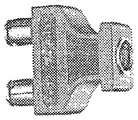
Recommended cables: Triax Felten & Guillaume Part No. 127657 and 127664
Triax BIW Part No. 10069-C-G20 and 10070-C-G14
Triax Belden types 9232, 8233, 9267 and 8232

STEREO CONNECTOR SYSTEM

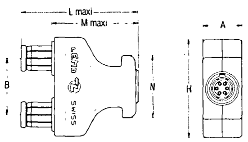
The LEMO stereo connector system consists of two receptacles, one double plastic panel washer, one bridge plug with or without monitoring output and one plug. The connector system may be either of the 3 pole type (303) or the 6 pole type (306).

The double plastic panel washer, the bridge plug and the strain relief of the plug are available in nine colors. Color coding washers and strain reliefs match the colored bridge plug shells.

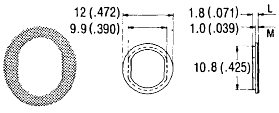




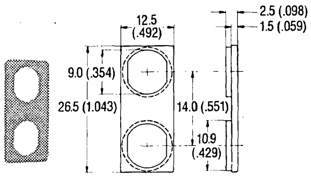
Bridge Plug: CAVF = Bridge plug with two non-latching plugs
CAVR = Bridge plug with two non-latching plugs and one monitoring receptacle for straight plug (test point)



RA 0.269-☐ ROUND INSULATING WASHER
(specify color)



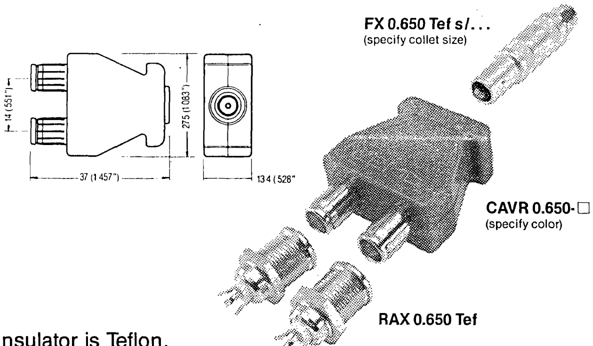
CAVR0B294-☐ RECTANGULAR INSULATING WASHER
(specify color)



CAVR 0.650 AND CAVR 0.651 TRIAXIAL BRIDGE PLUGS

CAVR 0.650 is - ☐ bridge plug with test point as shown
CAVR 0.651 is - ☐ bridge plug without test point.

These units are particularly suited for audio mixer or patching panel applications. LEMO's self-latching system is used between the FX 0.650 plugs and the RAX 0.650 receptacles as well as between the FX 0.650 and the CAVR 0.650 bridge plugs. LEMO's self-latching system is not used between the CAVR 0.650/CAVR 0.651 and the RAX 0.650 receptacles since the spring type contacts of the bridge plugs require a strong pulling strength.



Insulator is Teflon.
Wave resistance is 50 Ω.
Insulator resistance is $5 \bullet 10^6$ MΩ.
Contacts are made of BZ4 gold plated.
Shells of bridge plugs can be supplied in black, red, yellow, blue and white.

MAGNUM

SINGLE ROW TERMINAL STRIPS

Magnum single-row terminal strips are a truly low cost, rugged alternative to double row strips. . . for both new and retrofit applications. Made of unbreakable plastic, strips feature "Press-In" construction which tensions the terminal inserts into the plastic body for a solid, zero-clearance assembly. Press-in technique prevents any force on terminals from being transmitted to and injuring circuit board-to-pin connections.

All strips are in full compliance with appropriate UL and CSA standards.

MATERIAL SPECIFICATIONS

All Magnum terminal strip bodies are molded from UL rated 94V-O fire retardant thermoplastic. All current carrying terminal parts are 70/30 cartridge brass with a 200 microinch bright tin coat. Standard screws are cadmium plated steel. Terminal inserts are tin plated to exacting specifications and Magnum consciously adheres to the highest plating standards. . . which are necessary for good soldering.

UL & CSA COMPLIANCE

Meets UL 1059 and UL 94V-O, self-extinguishing. UL file E48580; CSA No. LR-28145. Contact Magnum for additional ratings.

*2 lines less for mount end. **Available in any practical length on special order.

SERIES A1000—.325 CENTERS—SINGLE ROW TERMINAL STRIPS

SERIES A1000 miniature strips have connections on .325 centers, with excellent selection of mount or barrier ends, flat or insulator bases, and selection of terminals including straight and right angle PC, wire-wrapping and no bottom terminals. Mount end—34 lines max.; barrier end—36 lines max.

Thousands of practical variations of top and bottom hardware. . . and covers, marker strips, legends, color strips. . . are available. . . most from standard dies.

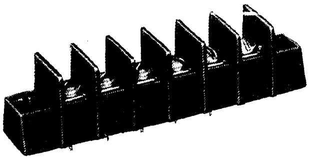
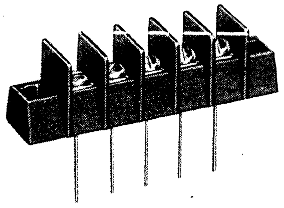
SINGLE ROW TERMINAL STRIPS—3/8 CENTERS

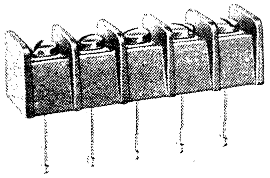
SERIES A2000 & LP2000



A202106-NL



A207105-NL



LP201205-NL

SERIES A2000 single row strips have connections on 3/8 in. centers, with mount or barrier ends, flat or insulator bases, and feed-thru terminals (straight hand wire, straight or right angle PC, wire-wrapping or quick connect). Strips can also be specified with non feed-thru bases (either open or closed type).

NEW SERIES LP2000 "Low Profile" single row strips have low silhouette barriers for compatibility with miniature and subminiature solid state circuitry for "tight" packaging situations. Other features are the same as Series A2000.

No. 6-32 screws are standard top hardware for both series; screws accept AWG 12 & smaller wiring and .312 wide rings and spade terminals. A wide variety of top and bottom hardware . . . and covers, marker strips, legends, colored strips are available . . . most from standard dies.

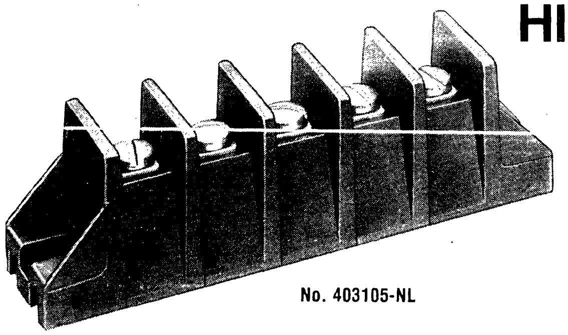
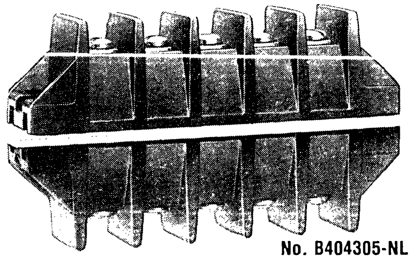
SERIES 4000 & B4000

SINGLE ROW TERMINAL STRIPS HIGH POWER—9/16 CENTERS



No. 403105-NL



No. B404305-NL

SERIES 4000 high power screw and stud feedthru strips are designed for high current, high power connections. Terminals are spaced on 9/16 in. centers, and strips can be supplied with any practical number of lines. See chart for top and bottom terminals available. Stud terminals are recommended for multiple ring lug connections. Strips have mount ends and fasten in panels up to 1/8 in. thick. Strips meet UL general purpose apparatus requirements for 600 V, 30 A rating.

Bulkhead connectors (Series B4000) comprise two strips mated through a bulkhead of cabinet wall up to 1/8 in. thick.

Series 4000 & B4000 are in full compliance with UL 1059 and UL 94V-O. Listed under UL file no. E48580 and CSA No. LR-28145.

Contact Magnum for complete dimensional data.

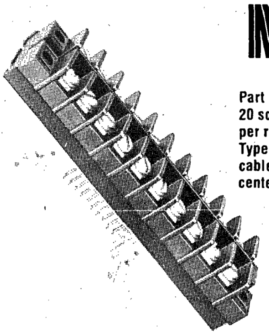
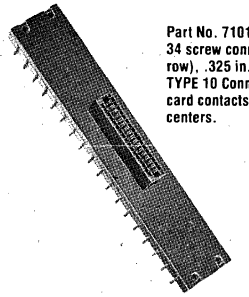
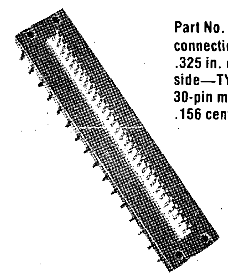
MAG-MASTER™ TERMINATING SYSTEM



Part No. 722120
20 screw connections (10 per row), .325 in. centers. Type 22 connector, 20-pin flat cable contacts, .100 x .100 centers, with latch.



Part No. 710134 (Rear View)
34 screw connection (17 per row), .325 in. centers. TYPE 10 Connector—34 pin edge card contacts on .100 x .200 centers.



Part No. 732130 30 screw connections (15 per row), .325 in. centers. Connector side—TYPE 32 Connector, 30-pin mass wiring header, .156 centers.

Mag-Master is a simple, time saving interface device used to interconnect field wiring with electronic and electromechanical circuits, equipment and systems. . . via state-of-the-art connectors, such as edge card, pin type, and flat ribbon type insulation displacement connectors.

Applications include alarm systems, computers & data processing equipment, environmental control systems, telecommunications, test adapters (in-house or field circuit test), instrumentation, programmable controls, power sources.

Mag-Master has four big built-in connecting advantages:

1. **FAST CONNECTING**—just plug-in your mating mass termination cable connector. The time needed for hand soldering of wires and hand loading of terminal strips in PC boards is eliminated. Field wiring connections are made via handy screw terminals.
2. **CONVENIENT CONNECTING**—Direct connecting for mass wiring techniques allows the use of state-of-the-art insulation displacement connectors which solves many interface problems between circuit wiring and field wiring.
3. **ECONOMICAL CONNECTING**—No need to fabricate special adaptive devices. Designing Mag-Master into your equipment and systems saves time in production, QA/QC, field work, and reduces your overall "installed" costs.
4. **VERSATILE CONNECTING**—Choose from 6 standard devices with a selection of 8 to 40 positions. Many special order features are possible. Contact Magnum for details.

Six types of standard connectors can be supplied with Mag-Master:

• **Type 10**	.100 x .200 Edge Card	20,30,34,36 Circuits
• **Type 12**	.156 x .200 Edge Card	20,24,30,36 Circuits
• **Type 20**	.100 x .100 Flat Cable (w/o Latch)	10, 14, 16, 20, 26, 34, 40, 50, 60, Circuits
• **Type 22**	.100 x .100 Flat Cable (with Latch)*	
• **Type 30**	.100 Centers Mass Wiring Headers (.025 sq. pins)	8,10,16,20,24 30,32,34,36,40 Circuits
• **Type 32**	.156 Centers Mass Wiring Headers (.045 sq. pins)	

IMPORTANT NOTE: Many other types of Mag-Master terminating devices are available on special order; contact factory for price and availability.

SPECIFICATIONS

Electrical: 3A, 150 V (all standard Mag-Master).

Terminal Strips: Molded from UL rated 94 V O polyester or fire retardant nylon. Current carrying parts are 70/30 cartridge brass with 200 microinch bright tin coat. Screws are on .325 in. centers in two rows; 6-32 screws accept AWG 14 & smaller wiring, and .250 in. wide wire lugs. Screws bright plated steel.

NOTE: See standard Magnum catalog for additional terminal strip specifications and options.

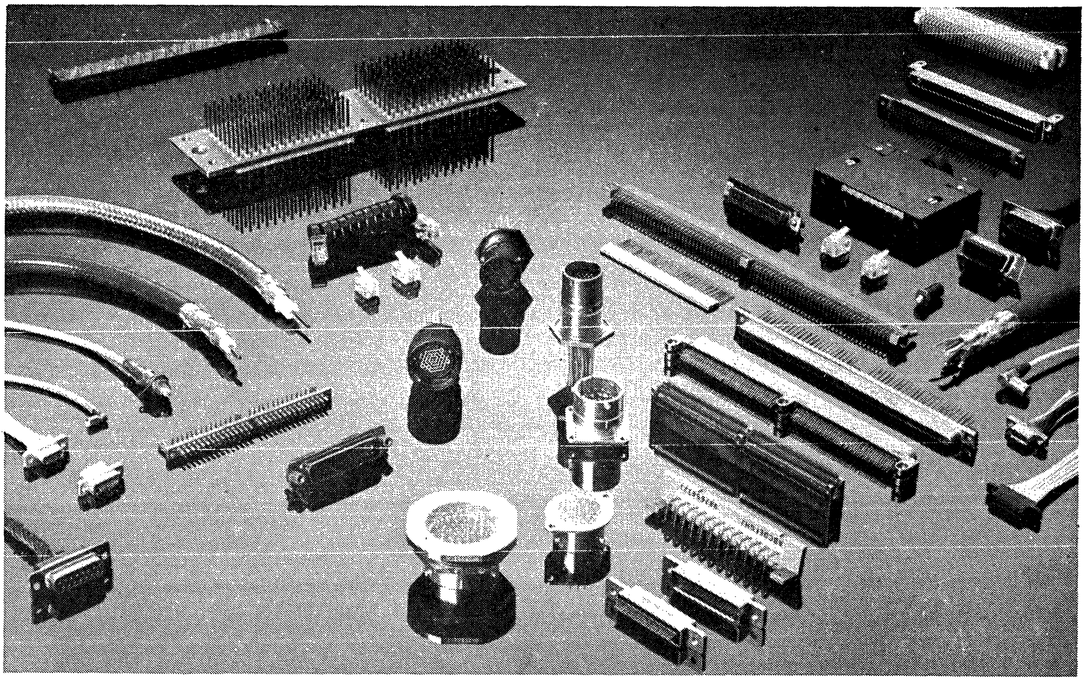
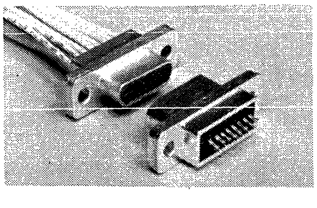
Connector and Cable Division

Microdot Electronic Components Group



The Connector and Cable Division of the Microdot Electronic Components Group has a longstanding worldwide reputation as a respected supplier of a broad array of electronic/electromechanical connecting devices and specialty cable. The Connector and Cable Division charter encompasses the engineering and manufacture of high-reliability MIL-Spec and commercial electronic/electromechanical connectors, specialty electronic cable and cable assemblies, and metal backpanels and plastic/metal headers. Products range from simple, low-cost wire-to-wire connectors, to highly sophisticated interconnect systems for electronic equipment.



Microminiature D Connectors
(Meets Mil-C-83513)

Microminiature D Connectors (MCK series - metal shell and MCD Series - plastic shell) utilize a precision #24 AWG patented low force (5oz. max) twist pin reducing individual contact insertion forces by 33%, while maintaining all previous mechanical, electrical and environmental standards.

- 8 different insert arrangements – 9, 15, 21, 25, 31, 37, 51 and 100 contacts on .050 inch centerlines.
- Meets MIL-C-83513 requirements.
- Vertically and horizontally mounted transition blocks available.

For additional information contact MALCO South Pasadena, (818) 799-9171.

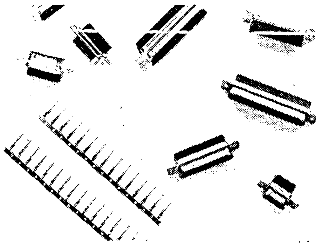
D-Subminiature Crimp Connectors
376 Series

Complies with most industry interface standards such as EIA-RS-232C, EIA-RS-449 and IEEE Project 802. Available in all standard contact configurations including 9, 15, 25 and 37 pin positions.

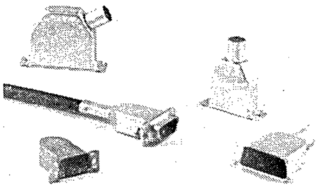
- Complete line of mounting and latching hardware types.
- Unique single-piece metal back shell hardware provides maximum EMI/RFI isolation.
- Application tooling available for both high and low volume cable assembly production.
- Compatible with AMP's HDP-20 Series



For additional information contact MALCO Montgomeryville, (215) 699-5373.

D-Subminiature Connector
Single-Piece Metal Backshells
382 Series

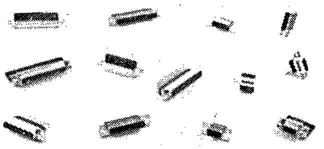
- Available in all standard shell configurations including: 9(E), 15(A), 25(B) & 37(C).
- Designed to comply with the EMI/RFI shielding requirements of both FCC docket 20780 and VDE.
- Designed for effective ESD shielding.
- Utilizes a crimp-applied dual ferrule system for excellent electrical and mechanical integrity.
- Available in vertical, 60° and 90° cable exit styles.
- Provides up to 60% savings in total applied cost when compared to foil wrap processes in over-molded assemblies.
- Considerably lower in cost, weight and profile size than die-cast backshell systems.
- Vinyl boot options provide insulation for non-molded assemblies where required.
- Application tooling available for either low or high volume cable assembly production.



For additional information contact MALCO Montgomeryville (215) 699-5373.

D-Subminiature Connectors
for PC Board and Solderless Wrap Applications
377 and 381 Series

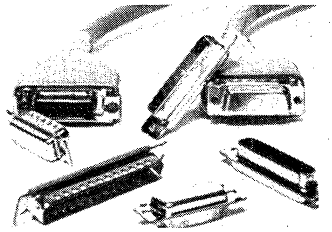
- Available in all standard contact configurations including: 9, 15, 25 & 37.
- Designed to comply with most industry interface standards such as: EIA-RS-232C, EIA-RS-449, IEEE Project 802 and Ethernet.
- Complete line of mounting and locking hardware types.
- Metal grounding strap option permits shielding from the connector shell to be carried to the PC board surface.
- Offered with either the traditional yellow chromate over zinc, or newer tin shell platings.
- Contact types include: vertical and right angle PC tails, as well as vertical two (2) and three (3) level wrap-types.



For additional information contact MALCO Montgomeryville (215) 699-5373.

D-Subminiature Connectors EMI/RFI Shielding Covers
378 Series

- Low cost shielding covers provide excellent protection from both emitted and induced EMI and RFI energy.
- Special interface detent tab optimizes shielding effectivity, while eliminating the need for additional mounting hardware, in many applications.
- Designed to mate with most industry standard D-subminiature, connector types (including Malco's Series 376 connectors).
- Available in several plating variations.



For additional information contact MALCO Montgomeryville (215) 699-5373.

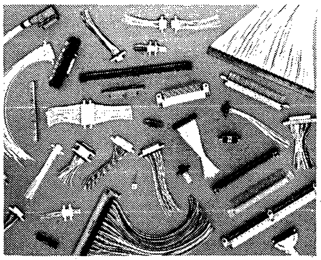
Mil Qualified Circular Hermetic Receptacles

Circular hermetically sealed environmental connectors are designed and fabricated to specialized military and commercial specifications and drawings. Primarily utilized in military/aerospace applications subjected to severe environmental conditions such as heat, humidity, vibration and shock.

- Military specifications include Mil-C-5015, Mil-C-25955, Mil-C-26482, Mil-C-26500, Mil-C-38999, Mil-C-83723, Mil-C-81703.
- Mounting styles include bulkhead mount, square flange, round flange, and weld mount.

For additional information contact Connector Industries Of America, (513) 733-3680.

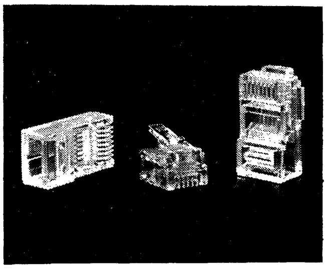


Rectangular Connectors

High density microminiature connectors featuring Malco's patented Twist Pin high reliability contact system. Provides perfect contact alignment with low engaging forces. Includes plastic and metal shell "D" connectors, plastic and metal shell two piece edgeboard connectors and strip connectors.

- Twist pins provide 7 points of contact no discontinuity in excess of 1 micro second and have a 3 amp rating.
- Contacts on .050 centers.
- Wire range #30 AWG and #24 AWG.
- Insert arrangements available from 9 pin to 400 pin.

For additional information contact MALCO South Pasadena, (818) 799-9171.

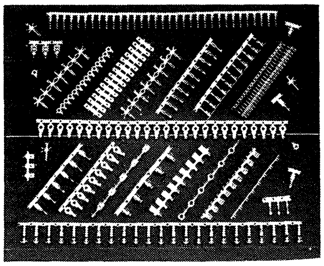


Telephone Module Plug 375 Series

Meets both FCC and REA specifications and has the latest design improvements, including a superior strain relief. Modular plugs available in 4, 6 and 8 circuit configurations for a host of telephone, computer or other key electronics applications.

- Shielded computer versions.
- Readily terminated to either stranded or tinsel cables.
- Available off-the-shelf in sub assembly form to minimize total applied cost.
- Contacts selectively gold plated for maximum economy and reliability.
- State-of-the-art application equipment is available for small & large volumes.

For additional information contact MALCO Montgomeryville, (215) 699-5373.



Strip Terminals

Malco is a leading supplier of strip terminals and other wire terminations with over 30 years experience in research, design and precision engineering.

- Pin connectors and pin receptacles
- Cord clamps — hooks, rings, offsets, wings, bands, "J's"
- Tabons and tab receptacles
- Snap-in male tab terminals
- Ring terminals — wire crimps, insulation pierce with and without insulation grip
- Spade terminals — insulation pierce or wire crimp with insulation grip
- Hook terminals
- Flag terminals
- Bobbin terminals
- Application equipment available for all terminal products

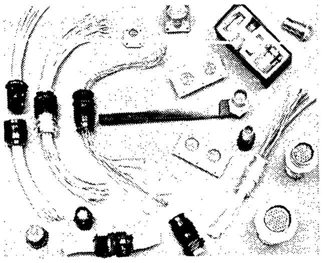
Connector and Cable Division
Microdot Electronic Components Group

Circular Connectors

Malco's proprietary line of high density, precision circular connectors represents the only modular multi-pin available in the industry today. Miniature 50-ohm, 75-ohm and 95 ohm coax contacts.

- Wire sizes 22 through 12 guage.
- Rear removable/insertable configuration – permits pre-termination of wires.
- Unsealed, environmentally sealed, or hermetically sealed.
- High density contact spacings as close as .065 centers.



For additional information contact MALCO South Pasadena, (818) 799-9171.

Coaxial Connectors - Microminiature

One of the best known, accepted lines of miniature and ultra miniature coax connectors in the industry, Malco lines include Standard, Golden Crimp™ Series, and Lepra/Con™ Series.

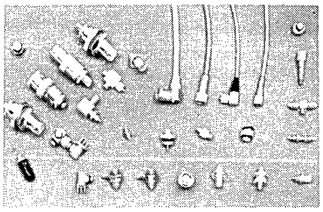
Each series offers straight and angle plugs, cabled jacks, bulkhead receptacles and adapters. A line of hermetic coax connectors is also available.

Standard Line
- Fits 50-95 ohm miniature cables.
- Threaded, "quick-connect", or slide-on coupling.
- Solder assembled center contact.
- Center contact gold plated; other metal parts silver plated.

Golden Crimp™ Series
- Rapid crimp assembly.
- Housing, nut, and contact gold plated.
- Operating temperature to 200°C.

Lepra/Con™ Series
- Ultra-Miniature Size.
- Fits 50 Ohm Miniature Cables.
- Threaded, Slide-On or Snap-Lock Coupling.
- Rapid Crimp Assembly (Straight Plugs and Jacks).
- Housing, Nut, and Contact Gold Plated.
- Operating Temperature to 200°C.

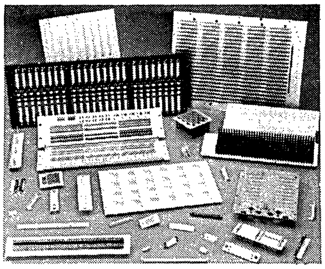
For additional information contact MALCO South Pasadena, (818) 799-9171.



Back Panel Assemblies and Headers Meets (Mil-C-28754, WS-6157, WS-6159)

Malco, the originator of the metal back plane technology produces aluminum metal plates for both card edge and metal to metal contact interfaces. Using a slide and tuning fork system, known as the wrappost assembly system panel, thousands of electrical terminations can be mounted on a single WASP plate. Malco features 3 amp contacts with .025″ square wire wrapposts on 0.100″, 0.125″ and 0.150″ centers as well as 6 amp contacts with .045″ square wire wrapposts on 0.200″ centers.

- High density up to 300 contacts per square inch with each contact positioned to permit use with automatic wire wrapping machines.
- Malco offers a complete line of extruded, metal and molded headers.
- Extruded headers series 440 & 441 provide reliable interconnection between the back plane and printed circuit board, selective plating, increased rigidity and maximum utilization of space.



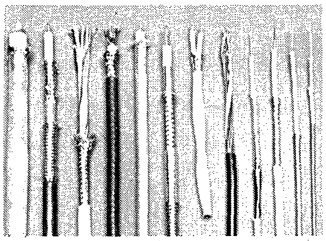
For additional information contact MALCO Montgomeryville, (215) 699-5373.

Wire and Cable

Malco offers a broad line of high-performance cables for a diverse range of applications.

These include microminiature coaxial cables, "Mini-Noise" cables, high temperature cables, and high speed data lines, including the increasingly popular Local Area Network cables.

Product offerings include:
- Microminiature coaxes, triaxes, twinaxes, etc.
- "Mini-Noise" cables reduce or eliminate the noise generated when the cables are flexed.
- Military type coax, twinax, and triaxial cables using PVC, polyethylene, nylon and flurocarbon materials.
- Foamed dielectrics including, FEP, polyethylene, and polypropylene.
- A wide range of cables classified by Underwriters Laboratory for fire and smoke characteristics (in accordance with Section 725-2(b) of the National Electric Code) for conduit-free installations in ducts and plenums.



For additional information contact MALCO South Pasadena, (818) 799-9171.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

LITHIUM BATTERY HOLDERS

Coin Cell Series

Lithium Batteries have gained wide usage for IC Memory Back-Up Systems due to long-lasting stable performance with low power consumption. A limitation in application has now been overcome with the introduction of MPD's printed circuit board mounted coin cell battery holders. The need for permanent mounting of the cell by use of solder tabs is now eliminated.

SPECIFICATIONS: Holder material—Self-extinguishing thermoplastic Polyester, VALOX® resin 420 SEO • Contacts—302 spring temper stainless steel, nickel plated • Flammability rating—UL94 V-0 • Dielectric strength—560 volts/mil at 25°C for 5 sec. • Color—Black • Temperature range— -55°C to +140°C • Resistance to solvents—Xylene; ethyl, butyl, methyl & propyl alcohol; ethyl acetate; heptane; toluene.

APPLICATIONS: • CMOS, Microprocessors & Microcomputer hold-memory • Electronic communications devices • Telecommunication equipment • Time clock back up.

FEATURES: • Fits all 3 volt coin-type cells • Printed circuit board mounting • Unique molded design offers easy insertion & removal of battery without desoldering or special tools • The molded in beveled edge does not allow coin cell to make contact if placed in holder upside down or reverse direction • Special design contacts assure proper polarity of inserted battery • Raised mounting tabs permit free air flow around battery & insulation from extreme solder bath temperatures • Low profile for high density packaging

MODELS BH2AA - BH3AA - BH4AA
MODELS BH2AAA - BH3AAA - BH4AAA

For NiCd, Carbon, Carbon-Zinc and Alkaline Cells

They come in three styles; PC-Printed Circuit; W-Wire; SF-Snap fastener, male/female terminals. They are used in Computers, Medical Instruments, Instrumentation and Security Equipment, etc. The MPD holder pack allows the above battery types to be replaced easily. The PC and wire models are soldered to the PC board whereas the snap fastener terminal model is not.

FEATURES: • Fits all AA and AAA type cells • PC-Printed Circuit Mountable • W-Wire 6" long ends stripped and tinned 3/16" typ. • SF-Snap Fastener terminals male/female (standard 9V configuration) • Is non-metallic • Battery compartments keep possible leakage self contained • Low contact resistance and corrosive free all nickel plated metal parts • Taper beam fittings keep batteries secure in place.

SPECIFICATIONS: • Holder material—Impact resistance nylon #6 • Contacts—Spring steel, nickel plated, imbedded in nylon • Terminals—Brass, nickel plated, snap fastener male/female terminals • Spring—Spring steel, nickel plated • Color—Black • Temperature Range— -40°C to +85°C. Resistant to Solvents—Aromatic and aliphatic solvents, hydrocarbons, common oils, refrigerants

APPLICATIONS: • Microcomputers & Microprocessors, Hold-Memory • Memory back-up for CMOS • Telecommunication equipment • Power source for computer real time clocks • Appliances • Programmable electronic games • Emergency power supply equipment • Alarm & security back-up • Industrial controls • Electronic communications devices

METUCHEN CAPACITORS INC.

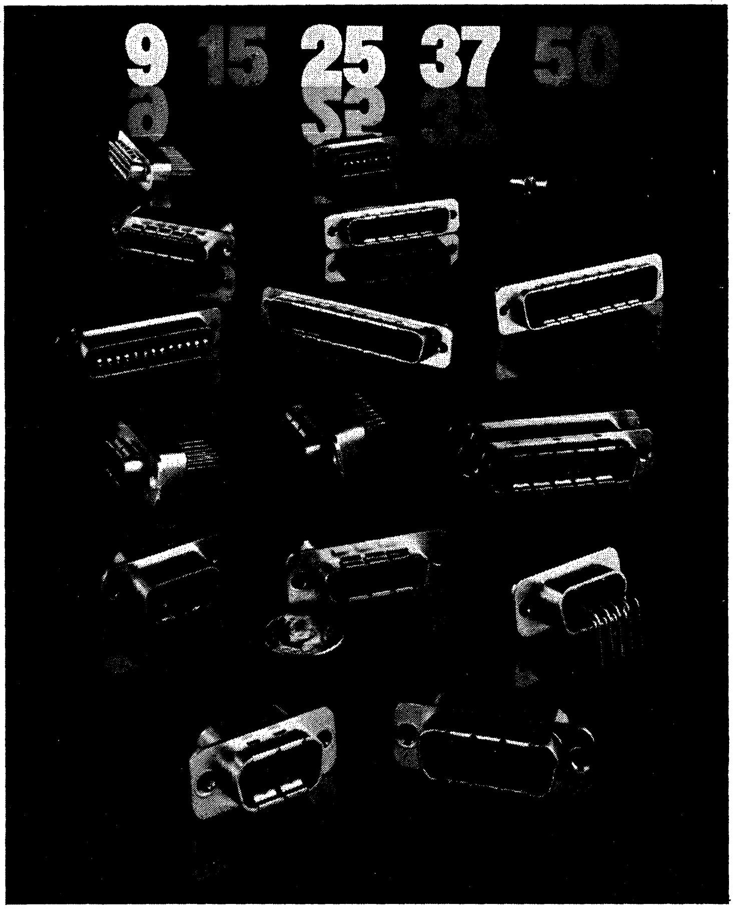
EMI Filtered D Subminiature Connectors

PRODUCT BENEFITS

- Provides optimum positioning of interference control at interconnect interface.
- Provides maximum volumetric efficiency.
- Design is based on proprietary ceramic technology of proven reliability and RF performance.
- Connectors mount in existing chassis hole pattern.
- A cost effective solution to electromagnetic compatibility (EMC).
- Provides a wide range of filter performance options.
- Adaptor styles provide for ease of retrofitting existing equipment.
- Testing 100% for key parameters ensures quality levels.
- Designed to provide compatibility with EIA RS-232 and RS-449.

M.C.I. has the world's largest inventory of filtered D-Subminiature connectors. These connectors are manufactured by the leader of the industry... Spectrum Control, Inc. Spectrum Control's Filtered D Subminiature connectors are designed to provide a cost effective method of complying with FCC Part 15, Sub Part J, VDE and MIL STD 461 A/B regulations. The filters are feed-thru capacitors and pi sections.

Our in-house stock includes all five shell sizes, 9, 15, 25, 37 and 50 position connectors in pin contacts (plugs), socket contacts (receptacles) and in the very versatile pin/socket adaptors. The four standard electrical configurations along with their performance values follows:



EMI FILTER PERFORMANCE

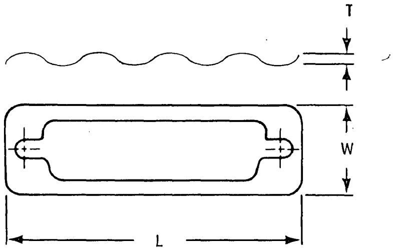
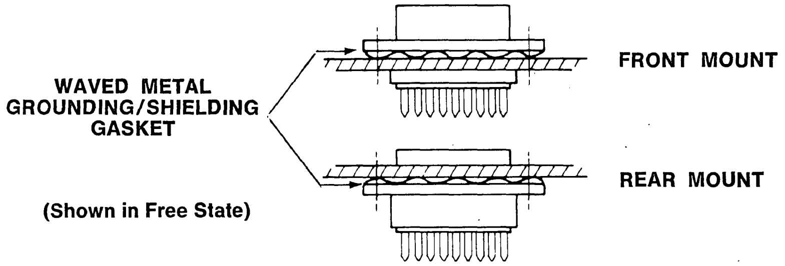
* When Rear Mounting Pin (Plug) Connector use Front Mounting Panel Cutout.

Mounting Considerations
Waved Metal Gaskets...For Complete EMI Protection

Proper mounting of any EMI filter — including the EMI filtered D Subminiature — is critical to the achievement of electromagnetic compatibility. The mounting surface for grounding the connector must be free from paint or any other insulating material. The sketches below indicate the use of one of Spectrum's EMI gaskets to fill any tolerance gaps and adjust for irregularities in the flatness of the mounting surface.





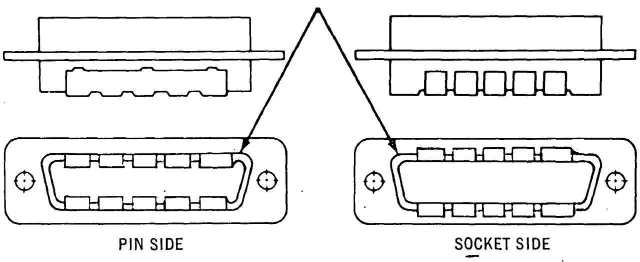
(Shown in Free State)

Shell Size	Mounting Configuration	L	W	T Free State	T Compressed	Part No.
25	Front - Socket	2.088 (53,04)	.600 (15,24)	.030 (0,76)	.005 (0,13)	572019-00102-70
	Rear - Pin					
	Rear - Socket	2.088 (53,04)	.600 (15,24)	.030 (0,76)	.005 (0,13)	572019-00107-70

Spectrum EMI Filtered D Subminiature...Unique

Spectrum D subminiature connectors feature a unique ground plane to effectively block bulkhead leakage of EMI. The design also provides line to line isolation separation to limit cross talk (line to line mutual coupling) to an absolute minimum. Another, and a most important feature, is the coaxial spring contact that provides proper electrical grounding when mating one connector to another connector.

R. F. GROUNDING SPRING CONTACT*



* Provided on all shell sizes — all termination styles Patent Pending.

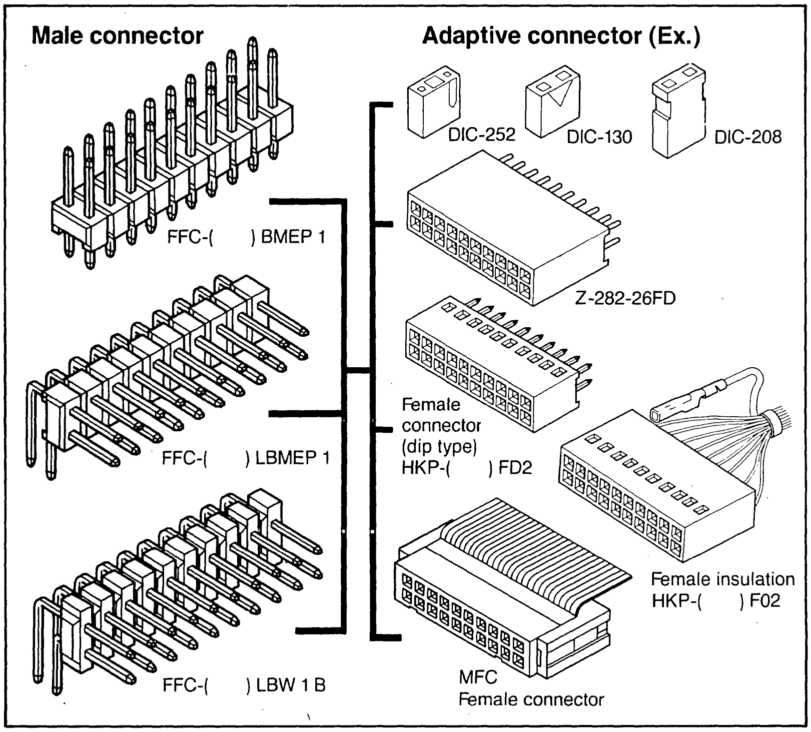
EEM PRODUCT SELECTION GUIDES

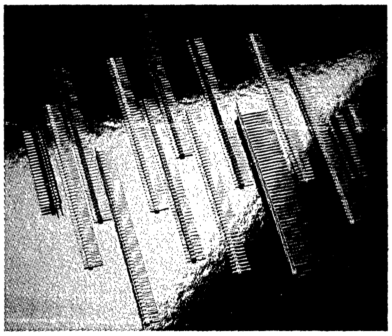
Use the EEM Product Selection Guides. There are 34 Guides in this edition of EEM. See page 2 (A•2, B•2, C•2, D•2) of each volume to locate the Product Selection Guides that pertain to your needs.

Honda Connectors FFC/MFC Series

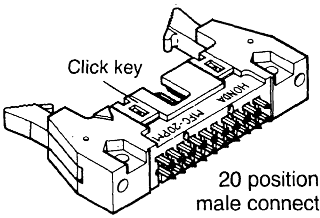
FFC Series connectors are straight and right-angle headers on 2.54 mm (0.100 in.) centers in tin or gold plating and selected gold. Choose from a variety of pin lengths using 0.64 mm (0.025 in.) square or round pins molded in a plastic strip that breaks to length desired for PC board installation. Single and double-row male and female connectors are available.



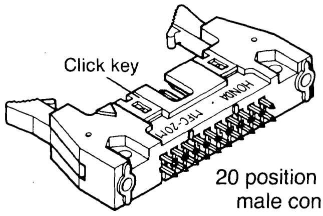
Male connector
Adaptive connector (Ex.)
DIC-252
DIC-130
DIC-208
FFC-( ) BMEP 1
Z-282-26FD
Female connector (dip type) HKP-( ) FD2
FFC-( ) LBMEP 1
Female insulation HKP-( ) F02
FFC-( ) LBW 1 B
MFC Female connector



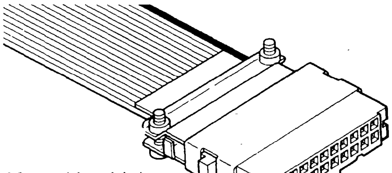
MFC Series ribbon cable connectors are available in straight, right angle and card edge configurations, with or without ejection latch. Pin pattern on 2.54 mm (0.100 in.) center spacing assures intermateability with similar connectors. Female connectors accept 0.64 mm (0.025 in.) square pin terminals with 10 to 64 contact positions. All plastic case parts prevent shorting between pins, receptacles and latching hardware. High speed signal transmission connectors combine the performance of coaxial cables with the economy and reliability of flat cables.



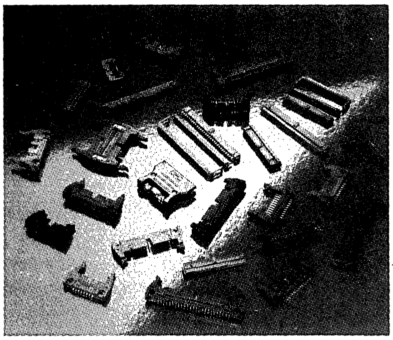
20 position 4-wall male connector with ejection latch



20 position 3-wall male connector with ejection latch



20 position high-speed signal transmission coaxial flat cable connector

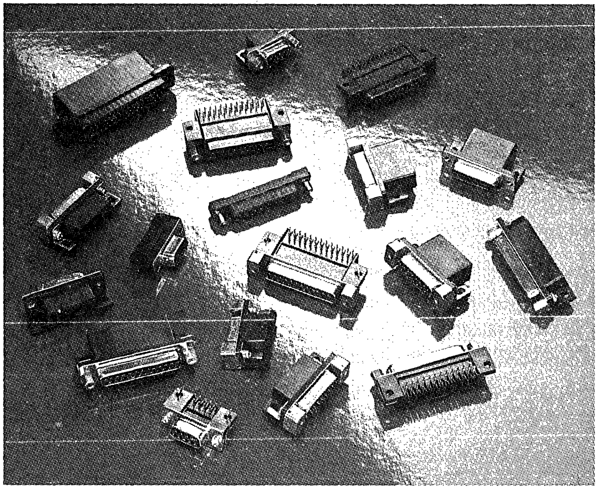


A wide variety of other connector series is available. For additional information or literature, call (312) 948-5600 or write Mhotronics, Inc., 444 Lake Cook Road, Suite 8, Deerfield, IL 60015.

MHO TRONICS

Honda Connectors GMM Series

GMM Series D-Subminiature pin and socket connectors are specially designed for modern high density packaging. They are completely intermateable and interchangeable with all similarly designed connectors. Applications include computer peripheral equipment, modems and industrial control instrumentation.



All GMM Series connectors are right-angle type for low cost, high performance printed circuit board mounting. Choose from 9, 15, 25, 37 or 50 contact positions and a variety of time-saving locking mechanisms and mounting hardware. Cases are all-molded, self-extinguishing thermoplastic to prevent short circuiting. All are available with steel shells for protection from electromagnetic and electrostatic interference on the mating side. When used in combination with other Honda connectors, this series offers a wide variety of packaging possibilities.

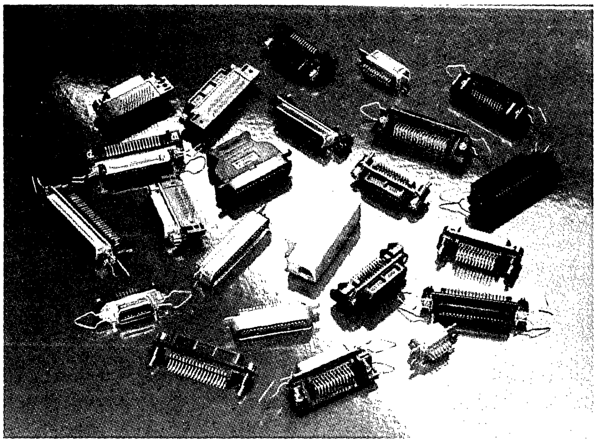
MHO TRONICS

Honda Connectors ADS Series

ADS Series Honda Connectors have broad applications in computers, communications equipment, measuring instruments and security equipment. They are completely intermateable and interchangeable with similarly designed connectors.



Choose from several configurations:

Insulation displacement connectors eliminate costly wire preparation by easily terminating ribbon and laminated cable, multi-conductor cable, unstripped and stranded wire. **PC board connectors** in vertical and right angle mount accommodate printed circuit board thicknesses from .062-.125 (1.57-3.18). **IEEE Interface Bus connectors** are available shielded and unshielded and conform to IEEE #488-1978. **Shielded connectors** provide protection from EMI and electrostatic discharge to sensitive circuitry. Available for ribbon cable, printed circuit boards, discrete wire or jacketed cable. **Pin printed circuit board connectors** combine cost effective pin terminals with insulation displacement connector interface.

Hz Hertz

I
IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J
JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K
kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L
LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M
MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
μF microforad
MHz megahertz
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOSIGT metal-oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N
NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM nuclear instrumentation module
NOR not OR
NTC negative temperature coefficient

O
OCR optical character reader
OEM original equipment manufacturer
OR a logical operator

P
PC printed circuit
PCB printed circuit board
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLL phased lock loop
PPI plan position indicator
PROM programmable read only memory
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q
QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R
RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S
SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon controlled switch
SDA source & detector assemblies
SIDAC bidirectional voltage-triggered switch
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T
TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U
UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V
VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)

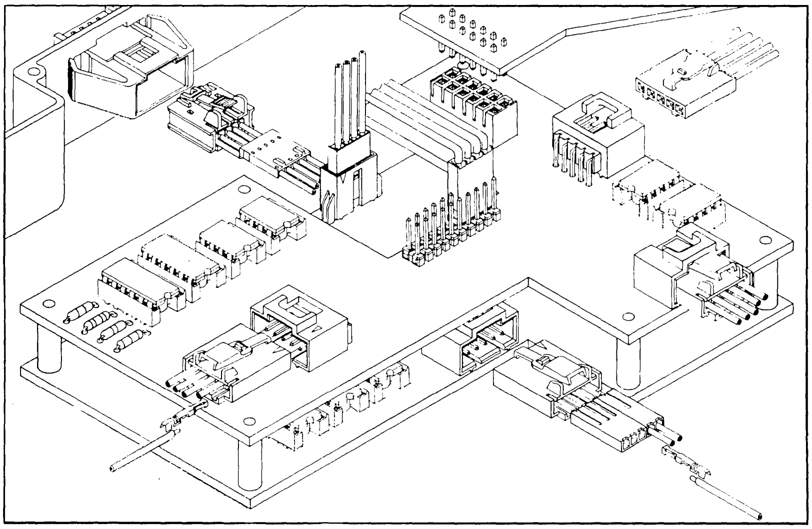
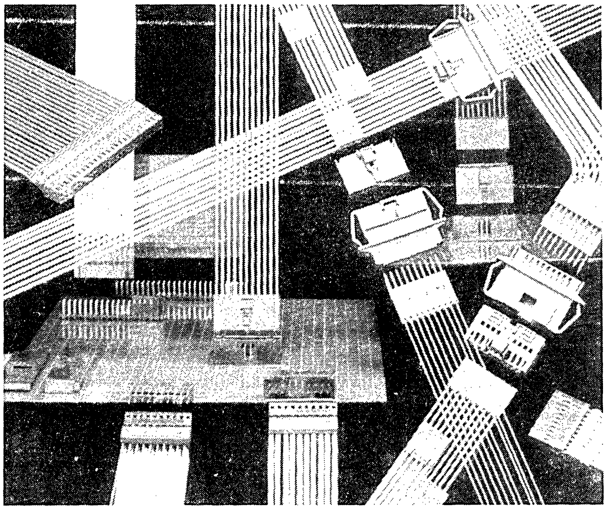
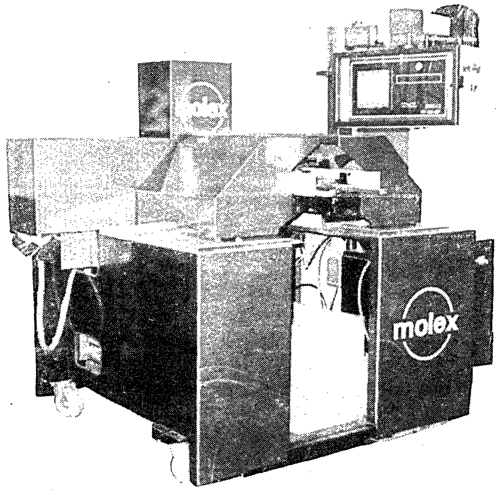
Z
ZIF zero insertion force

Service to the Customer ... Worldwide molex®

C-Grid™ .100" x .100" Center Interconnection System for Digital Electronics Applications







Fully automated harness making machine

Molex presents its modular .100" center interconnection products ... **C-Grid™**, our **dual row system for digital circuit boards** and **C-Grid SL™**, our new **single row fully stackable wire-to-board and wire-to-wire system.**

Both families feature similar material and electrical specifications and both utilize .025" pins, and selective plating.

C-Grid, based on a .100" grid, is designed for dense electronic packaging. It is comprised of straight and right angle headers in several styles including breakaway, shrouded, and end-to-end stackable. Also featured are board-to-board and wire-to-board connectors. A two-circuit shunt, which acts as a switch, completes the C-Grid product family. A line of insulation displacement type application tooling is offered to terminate the wire-to-board connector.

C-Grid boasts preassembled, single piece construction, modularity, design flexibility and automated harness-making capabilities when combined with our tooling. (See photo above)

Four low profile, stackable housings form the basis of the system. Each housing accommodates either male or female terminals, ID-type OR crimp.

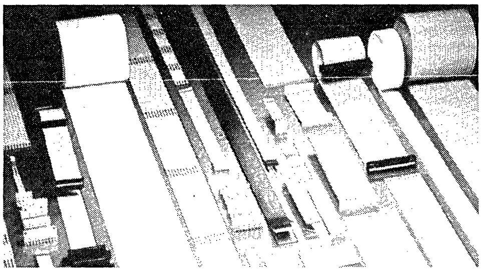
Planar Cable Products

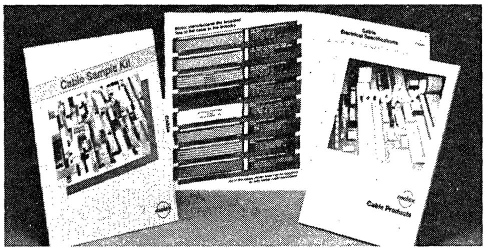


Molex manufactures the broadest line of flat cable in the industry.

- .050" center round conductor flat cable
- Gray PVC insulation
- Up to 68 circuits; 26 and 28 AWG
- UL Style 2651 - 300 V, 105°C, V W-1

- .100" center round conductor flat cable
- Gray PVC insulation
- Up to 36 circuits; 22, 24, 26 and 28 AWG
- UL Style 2651 - 300 V, 105°C VW-1

- .156" center round conductor flat cable
- Gray PVC insulation
- Up to 24 circuits; 18 and 22 AWG
- UL style 2651 - 300 V, 105°C, VW-1



Write for free sample kit

- .050" center foil shielded cable
- Reduces EMI/RFI
- Gray PVC insulation/black PVC jacket
- Up to 60 circuits
- UL style 2651 - 300 V, 105°C, VW-1

- .050" center foil ground plane cable
- Reduces crosstalk/controls impedence
- Gray PVC insulation/Black PVC jacket
- Up to 60 circuits
- UL style 2651 - 300 V, 105°C, VW-1

- .100" and .156" centers Polyshield™ cable
- Alternative to coax below 5 MHz
- Reduces crosstalk and EMI/RFI
- UL style 20325 - 300 V, 80°C VW-1

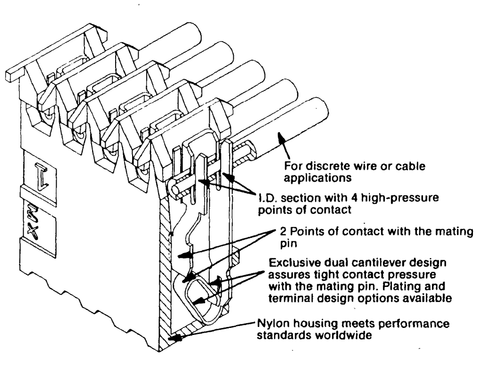
- .100" center heavy duty composite cable
- Tough insulation resists cut/melt through
- Natural irradiated PVC/Tan PVC insulation
- Up to 24 circuits

IDT™ Insulation Displacement Technology

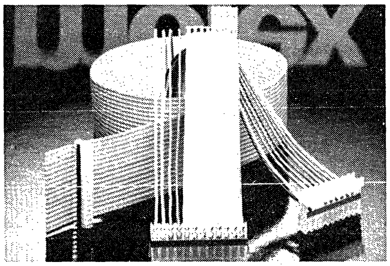
Molex offers a complete insulation displacement system including harness and non-harness board connectors, edge connectors, and UL listed round conductor flat cable.

Molex IDT connectors are offered on five center spacings: .050", .098", .100", .156", and .200".

Detail of Standard IDT Connector



For discrete wire or cable applications
I.D. section with 4 high-pressure points of contact
2 Points of contact with the mating pin
Exclusive dual cantilever design assures tight contact pressure with the mating pin. Plating and terminal design options available
Nylon housing meets performance standards worldwide



IDT features

- **Mass termination to lower your applied costs**
- Housings are pre-loaded with IDT terminals
- Proven double cantilever contacts
- Accepts round conductor flat cable and discrete wires
- Optional locking ramp and voided circuits
- Polarizing keys and pegs available
- Molded-in strain reliefs on each side of daisy chain connectors
- Drop in replacement for Molex crimp-type connectors
- Optional dust covers available

Molex Incorporated, Dept. JJ • 2222 Wellington Court • Lisle, IL 60532 • Phone (312) 969-4550

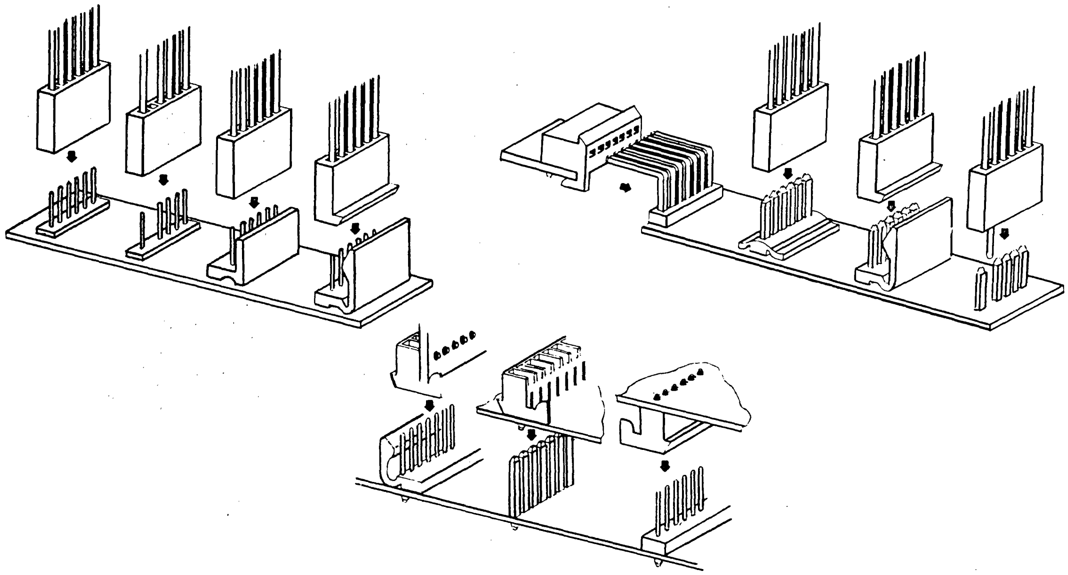
KK® Modular Interconnection System

A system of "building block" connectors for printed circuit board applications on .098", .100", .156", .197" and .200" centers. The system includes components for wire-to-board, board-to-board, and board- or wire-to-chassis connections.



UL Recognized File #29179
CSA Recognized File #19980

KK Technical Data*

Voltage Rating - 250 VAC max.
Current Rating - (.098" and .100") 2.5 amps max. with 22 AWG wire
- (.156" and .200") 7.0 amps max. with 18 AWG wire
Resistance - 20 milliohms max.
Dielectric Withstanding Voltage - 1500 VAC for 60 seconds
Insulation Resistance - Greater than 500K megohms (24°C and 50% R.H.)

Temperature Range - -40°C to 105°C

*Detailed product specifications should be requested for approval testing.

Features

Crimp Terminal Housings

- .197" and .100" versions 94V-0 material
- Variety of polarization methods
- Locking ramp
- Many circuit sizes

Solder Tail Connectors

- Accepts mating pins vertically, horizontally, thru board
- Strain relieving board hooks
- Stackable end-to-end
- Pre-assembled with double cantilever gas tight terminals

Headers

- Polarization thru voided positions, polarizing walls, non-symmetrical pin spacing
- Locking wall option
- .156" chassis or board mount version for feed thru applications
- Stackable end-to-end
- Industry compatible

Male Pins

- .045" or .025" square or round
- Press fit and solder to board
- Variety of platings and lengths

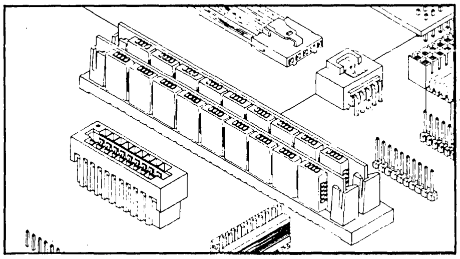
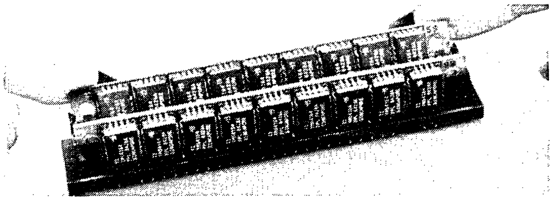
SIMM* Socket saves board space





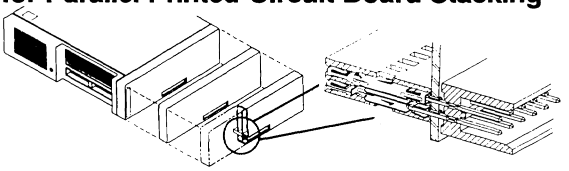
Serving as the connector portion of a high-density memory packaging system, the SIMM Socket provides a convenient means of expanding RAM capabilities.

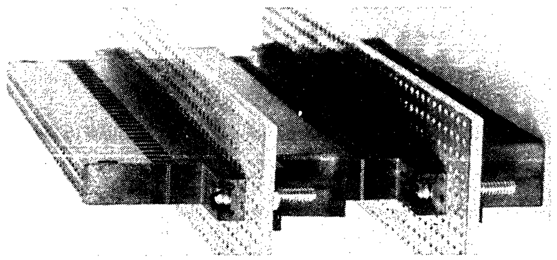
Using current technology, the maximum memory capacity of a discrete IC chip is 256K x 1 DRAM in a 16-pin package. Using the SIMM Socket, memory capacity can be increased to 1,152K DRAM bits (128K x 9 DRAM bits in a 60-pin package).

***Single In Line Memory Module. SIMM is a trademark of Wang Laboratories. Write for data sheet.**

Go-Thru™ Interconnection System

for Parallel Printed Circuit Board Stacking





Designed for easy plug-in by the end-user, the two-piece Molex GO-THRU™ system provides the parallel interface for personal computer add-ons such as disc drive controller, modem, additional memory, networking module and printer. The GO-THRU also provides the interconnect for internal parallel printed circuit board stacking.

Write for data sheet.

Fiber Optic Systems

User Friendly! You needn't be an optics expert!

Molex's series of fiber optic links are unique systems that transfer electronic signals using fiber optics. Each system includes a fiber optic transmitter and receiver, housing and preterminated cable assembly. The Molex systems are available in SIMPLEX (single channel) or DUPLEX (two channels) configurations to process either digital or analog electronic signals. They have TTL output and can solve grounding, EMI, and RFI signal transmission problems.

Features:

- Low cost packages
- LSTTL/TTL compatible output level
- Single +5V receiver power supply
- 40 kHz analog or 10 K baud digital
- Sealed against dust and moisture
- Low profile (Simplex)
- Electrical connector interface (Duplex)
- Predetermined cable assemblies
- Low electromagnetic susceptability and emissions
- Operation to 60 meters
- .100" center line electrical leads
- Standard or special length cable assemblies
- Color coded transmitter and receiver
- Choice of collector pull-up resistors

Applications:

- Electronic control systems
- Static protection
- High voltage isolation
- Extremely wet or dirty environments
- Inter/intra-system data links
- EMC regulated systems (FCC, VDE)
- Secure data communications
- Medical equipment

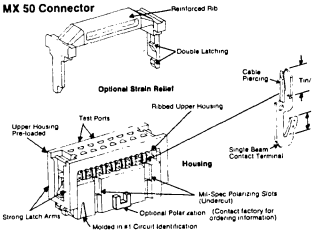
MX-50™

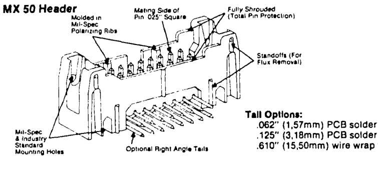
.050" Center Ribbon Cable Interconnection System

MX 50 Connector



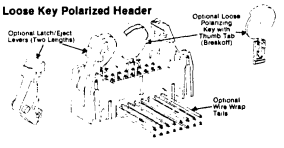
Reinforced Rib
Double Latching
Optional Strain Relief
Cable Piercing
Tin/Lead
Material Beryllium Copper
15 or 30M min Gold (selective) - Nickel Underplate
Single Beam Contact Terminal
Ribbed Upper Housing
Test Ports
Upper Housing Pre-loaded
Housing
Mil-Spec Polarizing Slots (Undercut)
Optional Polarization (Contact factory for ordering information)
Strong Latch Arms
Molded in #1 Circuit Identification

MX 50 Header



Molded in Mil-Spec Polarizing Ribs
Mating Side of Pin .025" Square
Fully Shrouded (Total Pin Protection)
Standoffs (For Flux Removal)
Mil-Spec & Industry Standard Mounting Holes
Optional Right Angle Tails
Tail Options:
.062" (1,57mm) PCB solder tail
.125" (3,18mm) PCB solder tail
.610" (15,50mm) wire wrap tail

Loose Key Polarized Header



Optional Latch/Eject Levers (Two Lengths)
Optional Loose Polarizing Key with Thumb Tab (Breakoff)
Optional Wire Wrap Tails

Non-Polarized, Straight Tail Version

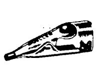
MICRO-GATOR CLIP
(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028 Trademark Reg.

Micro-Gator



Micro-Gator with Insulator

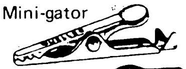
The alligator clip with the microscopic tip! New design features rivet hinge for greater strength. This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator, the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 7/32" (.55) jaw spread. 1-3/32" (2.78) long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

No. 34 — Steel, cadmium plated
No. 34-C — Solid Copper
No. 36 — **Insulator for 34 and 34-C**

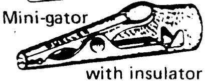
MINI-GATOR CLIP

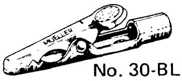
U.S. Patent No. 3,321,736 Trademark Reg.

Mini-gator

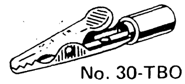


Mini-gator with insulator





No. 30-BL



No. 30-TBO

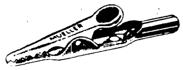
Indispensable for testing or incorporation into miniaturized equipment. Design features rivet hinge for greater strength, full-meshing teeth to grip finest wires. Skin-tight flexible vinyl insulator (sold separately) covers completely — has slotted "lip action" tip. Clip weighs 1/20th oz. has tiny 11/64" (.44) O.D. nose, but ample 3/16" (.48) jaw spread 1-3/32" (2.78) long. Crimping ears. Solder connection. Surprisingly strong bite penetrates corrosion and coatings.

No. 30 — Steel, cadmium plated
No. 30-C — Solid Copper
No. 30-BL — Steel, cadmium plated with rolled barrel tail section, 1-1/4" (3.18) long
No. 30-TBO — Steel, cadmium plated with 6-32 thread steel barrel, 1-1/4" (3.18) long
No. 32 — **Insulator for 30, 30-C, 30-BL, 30-TBO**

"60 SERIES" ALLIGATOR CLIPS

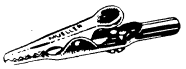
U.S. Patent No. 3,321,736 (All 5 Amp.)

No. 60 — CONVENTIONAL TYPE



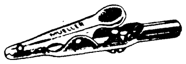
New slim design with full-meshing teeth. Convenient, round thumb grip, barrel connection for banana plug. Equipped with small soldering lip. Strong spring with a hard bite. Cadmium plates. 1-31/32" (5.00) long. **Also available in stainless steel. Ask for No. 60-X.**

No. 60-S — SCREW CONNECTION



Eliminates necessity for soldering. Otherwise same as No. 60.

No. 60-CS — COPPER ALLIGATOR CLIP



Solid copper version of No. 60-S. Screw connection. 1-31/32" (5.00) long. 10 per box.

No. 60-NS — ALLIGATOR NEEDLE CLIP

Like No. 60-S, but with insulation piercing needle in one jaw. Screw connection. 1-31/32" (5.00) long. 10 per box.

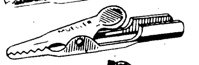
No. 60PR-2 — SPECIAL BARREL FOR TEST PROD OR PHONE TIP

Barrel crimped to provide friction fit on standard test prod or phone tip. Holds prod on test, frees hand for other work.

No. 60HPR WITH INSULATED HANDLE

Like No. 60PR-2 except with insulated sleeve (red and black).

No. 60-U — SPECIAL U-SHAPED BARREL

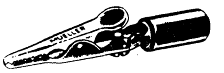


U-Shaped barrel allows for greater variety in wire sizes and mechanical use. Steel, cadmium plated, 1-31/32" (5.00) long.

No. 60-TBO — THREADED STEEL BARREL

Tail section of clip has a threaded steel barrel to allow connection to any 8-32 threaded male test prod or screw. Steel, cadmium plated, 2-1/8" (5.40) long.

No. 60-HS — STEEL ALLIGATOR CLIP WITH INSULATED HANDLE

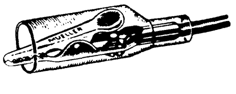


Same as No. 60-S except equipped with red and black insulating sleeves on end. Very convenient for distinguishing leads. Has screw connection also. Cadmium plated. 2-11/32" (5.95) long. Shipped half red, half black.

No. 60-CHS — COPPER ALLIGATOR CLIP, INSULATED HANDLE

Solid copper version of No. 60-HS. Screw connection. Shipped with half red, half black insulating sleeves. 10 per box.

No. 62 FLEXIBLE VINYL INSULATOR

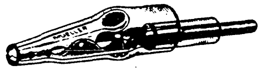


Red and black insulators for Alligator Clips 60, 60-S, 60-CS, 60PR-2, 60-X, 60-NS, 60-U.

COMPLETELY INSULATED ALLIGATOR CLIPS

Patent Pending

No. 63 or 63-C Clip



Sold only as a unit, with factory-applied insulators.

Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted tip that permits opening of clip without exposing metal. Insulator nose is only 13/64" O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. Screw connection easily made by slipping insulator forward. 2-1/4" (5.72) long.

No. 63 — INSULATED ALLIGATOR CLIP (STEEL)

Composed of Mueller No. 60-S Alligator Clip steel, cadmium plated, screw connection, complete with 2-piece vinyl insulator. Shipped half with red insulators, half black. 10 per box.

No. 63-C — INSULATED ALLIGATOR CLIP (COPPER)

Composed of Mueller No. 60-CS Alligator Clip, solid copper, screw connection. Shipped half with red insulators, half black. 10 per box.

"70 SERIES" ALLIGATOR CLIPS

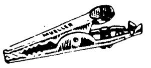
U.S. Patent No. 2,762,028

Features simplified design, fast connection of wire with cord strain relief ears, patented hinge construction and lower cost.

No. 70 — FOR SOLDERED CONNECTION

Steel, cadmium plated, 1-11/16" (4.28) long.

No. 70-S

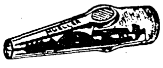


Same as No. 70 with screw.

No. 70-CS — COPPER SCREW CONNECTION

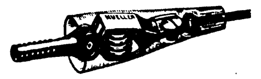
Solid copper version of No. 70-S.

No. 72 — SKIN-TIGHT INSULATOR FOR 70 SERIES ALLIGATOR CLIPS!

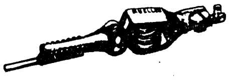


For the first time complete, skin-tight, one-piece insulation for a standard size Alligator Clip! Covers entire clip right down to nose. Special tip slot permits full jaw opening without exposing teeth.

CROCODILE CLIPS



No. 85 or 85-C Clip with No. 87 Insulator



No. 85-T Clip

No. 85 — A very small clip with slender, elongated jaws for getting into tight places in radio or electrical test work. Screw connection. 2-1/8" (5.40) long.

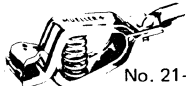
No. 85-C — Same as No. 85, except solid copper with phosphor bronze spring, brass screw. A radio frequency, entirely non-ferrous test clip. 10 per box.

No. 85-T — Crocodile "Tip Clip" — equipped with standard phone tip on one jaw, otherwise same as No. 85. Ideal for use as a prod for ordinary clip connections and for connections to insulated binding posts having nonremovable heads. 2-5/8" (6.67) long. 10 per box.

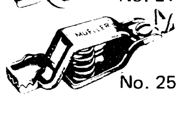
Use No. 87 Insulators for clips 85, 85-C and 85-T. Red and Black. Cover entire slip except nose. Protect against short and shock. Help to distinguish leads.

LARGER SIZES OF CLIPS

No. 24-A — 25 Amp. Steel, lead plated. 2-27/32" (7.22) long
No. 25 — 40 Amp. Steel, cadmium plated. 3" (7.62) long
No. 25-C — 75 Amp. Solid Copper. 3" (7.62) long
No. 21-A — 50 Amp. Steel, lead plated. 4-7/64" (10.44) long
No. 21-C* — 100 Amp. Solid Copper, 4-1/2" (10.04) long
No. 11-A* — 100 Amp. Steel, lead plated. 6" (15.24) long
No. 33-C* — 300 Amp. Solid Copper. 7-3/8" (19.69) long



No. 21-C



No. 25-C

All packed 10 per box.

*Furnished with detachable lug connection for easy securing to large cables

A COMPLETE LINE OF ELECTRICAL and ELECTRONIC TEST ACCESSORIES

Mueller

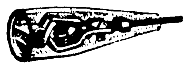
MUELLER ELECTRIC COMPANY
1583 East 31st Street, Cleveland, Ohio 44114
CALL TOLL FREE 800/222-2600, ext. 174
(In Ohio 800/556-1600 ext. 174)

TEST CLIPS

No. 45 PEE WEE

A very small test clip for radio, ignition, meter and similar work. 1-17/32" (3.89) long. Jaw spread 5/16". Steel cadmium plated.

No. 45-C
Solid Copper R.F. Test Clip

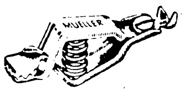


No. 45-C Clip
No. 47 Insulator

Solid copper radio frequency test clip. Phosphor bronze spring, brass screw. Will not heat up in high frequency test work, entirely nonferrous. 1-17/32" (3.89) long. 10 per box.

Use No. 47 Insulator for clips 45 and 45-C.

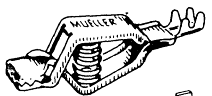
No. 48-B



A small test and battery clip for radio use and general testing purposes. 2" (5.08) long. Jaw spread 1/2" (1.27). Steel, cadmium plated. 10 per box.

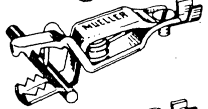
No. 48C — Solid Copper. Same as 48-B.

No. 48B-2E



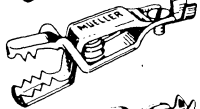
A small test and battery clip for general testing purposes. 2" (5.08) long. Jaw spread 1/2" (1.27). Two rear clinching ears. Steel, cadmium plated.

No. 50-C COPPER NEEDLE CLIP



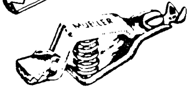
Solid copper clip with beryllium copper piercing needle in the top jaw for quick test contact through wire insulation. 6-32 brass set screw, 2-9/32" (5.79) long. 10 per box.

No. 51-C COPPER CLIP



Same as No. 50-C but without needle. Ideal for meter testing.

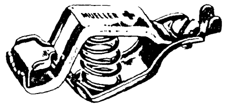
No. 55



Designed for electronic meter, ignition, and general testing. Features interlocking neck construction. Meshing teeth at front of jaw. 2" (5.08) long. Jaws open 7/16" (1.11).

Use No. 49 Insulator for clip No. 48-B, 48-C, 48B-2E, 50-C, 51-C, 55 and 95.

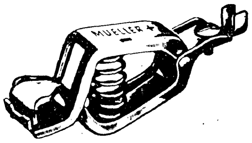
No. 80



Lighter construction clip with interlocking design. Ideal for battery chargers, trickle chargers, storage battery operated devices, automotive test equipment and general test work. 2-27/32" (7.22) long. Jaws open 3/4" (1.90).

Use No. 26 Insulator for clip No. 80.

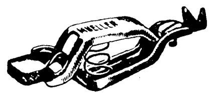
No. 96



A standard for battery charging work or for use on battery-powered equipment. Interlocking jaws. 10-32 screw. 4-7/64" (10.44) long. Jaws open 13/16" (2.06).

Use No. 23 Insulator for clip No. 96.

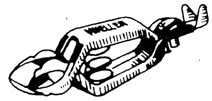
No. 27



A high grade test clip with meshing teeth on three sides of jaws. For laboratory and shop test work. 2-7/16" (6.19) long. Jaw spread 5/8" (1.59). Steel, cadmium plated. 10 per box.

No. 27-C — Solid copper. Same size as No. 27. 10 per box.

No. 27-CG GEOPHONE COPPER CLIP



Highly specialized solid copper clips for use in geophysical work. Curved jaws clip onto seismograph cable rings. May be simply "yanked out" when test is completed. 10 per box.
No. 27-CG has 7/32" (.55) wide jaw
No. 27-CGW has 13/32" (1.03) wide jaw

Use No. 29 Insulator for clips 27, 27-C, 27-CG and 27-CGW.

FLEXIBLE INSULATORS FOR CLIPS

A convenient protection against short circuit and electric shock. Colors help distinguish leads. Packed half red and half black to indicate polarity. Long tail prevents breakage of wire. Constructed so the clip is held firmly. Flexible insulators are also available in blue, white, yellow and green to fit all Mueller clips.

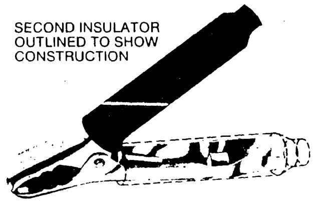
HIPPO-CLIP



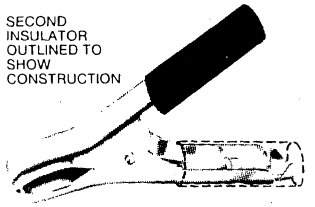
HIPPO-CLIP — For battery booster cables and fast chargers. Proved higher quality and superior design. Built-in solder strap and clinching ears for fast, sure cable connection. Supplied with vinyl handle insulators in red or black. Full 1-9/16" (3.97) jaw spread. 6" (15.24) long.

No. 41-A — Steel, bright copper plated, 100 amp

No. 41-C — Solid Copper, 300 amp

No. 43 — Insulator only

PIGMY HIPPO-CLIP



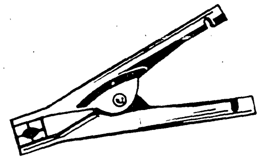
PIGMY HIPPO-CLIP — A new small plier clip for battery operated equipment and automotive test. Flat, wide handle allows positive grip. Won't "squirt away". Built-in solder strap and wire clinching ears. Supplied with vinyl handle insulators in red or black. Ample 1-1/8" (2.85) jaw spread. 2-13/16" (7.14) long.

No. 46-A — Steel, bright copper plated, 50 amp

No. 46-C — Solid Copper, 75 amp

No. 46-1 — Insulator Only

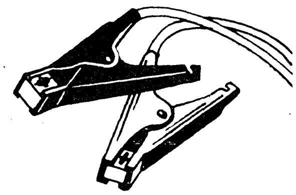
No. 44 CLIP, 300 AMP



Slim Jim clips feature solid copper jaws especially designed to provide fast, positive connections on conventional top and newer side terminals. Long, slim design provides optimum leverage and facilitates working in close quarters. Fully insulated vinyl-clad steel clips are available in red or black.

SPECIFICATIONS: Jaw Opening: 2"
Jaws: Solid Copper
Std. Pk.: 10

SLIM JIM™ BOOSTER CABLES



Heavy-duty quality feature Slim Jim clips (see features above). Provide positive, spring-loaded grip on top and side terminals. Solid copper cables are finely stranded for maximum flexibility. Heavy thermoplastic rubber insulation resists moisture, salt, acids, oils and grease. Cables won't tangle, crack or flake even at extreme temperatures.

Model	Length	Solid Copper A.W.G.	No. of Copper Strands

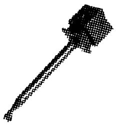
CALL TOLL FREE 800/222-2600, ext. 174
(In Ohio 800/556-1600 ext. 174)

"CLIPPER" PLUNGER-TYPE TEST CLIPS

"Clipper" test clips make difficult IC test connections fast and easy. Spring-loaded hook attaches to delicate component leads and terminals to free hands while troubleshooting and circuit testing.

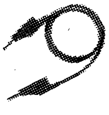
No.	Length	Color
201 "Micro"	44.45 mm (1.75")	Specify color: Red, black, yellow, blue, green or violet.
202 "Mini"	63.50 mm (2.5")	
203 "Standard"	88.90 mm (3.5")	
205 "Maxi"	127.00 mm (5")	



"ULTRA-FLEX" TEST LEADS

Laboratory-grade test leads provide superior performance and longer test lead life. Main conductor consists of 512 strands of soft drawn copper wire for tangle-free operation. Pure silicone rubber insulation withstands temperatures from -100°C to 300°C (-148°F to 572°F).

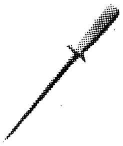
No.	Length	Color
3025	250 mm (9.843")	Specify color: Red, black, yellow, blue, green or violet.
3050	500 mm (19.685")	
3100	1000 mm (39.370")	
3150	1500 mm (59.055")	
3200	2000 mm (78.740")	



"ULTRA-TECH" TEST PRODS

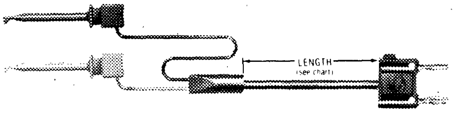
Accepts ULTRA-FLEX Test Leads and other 3.5 mm banana plug terminated leads. Feature lightweight, thermoplastic insulation that can withstand temperatures to 300°C (572°F).

No.	Length	Color
3930	130 mm (5.118")	Specify color: Red, black, yellow, blue, green or violet.



"MINI-CLIPPER" TEST CLIPS TO STACKABLE DOUBLE BANANA PLUG

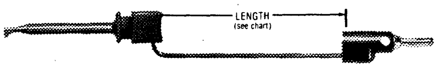
No.	Length
1170-C-12-0	12" (304.8 mm)
1170-C-24-0	24" (609.6 mm)
1170-C-36-0	36" (914.4 mm)
1170-C-48-0	48" (1219.2 mm)
1170-C-60-0	60" (1524.0 mm)



Mini-Clippers make difficult IC connections fast and easy. Molded "Y" block prevents separation and contact corrosion. Double Banana Plug features exclusive nine-leaf phosphor bronze, nickel-plated spring. Multiple stacking feature. Coaxial Cable: Black Shielded RG58C/U, MIL-C-17D, 50 Ohm.

"MINI-CLIPPER" TEST CLIP TO STACKABLE BANANA PLUG

No.	Length
1120-A-12-*	12" (304.8 mm)
1120-A-24-*	24" (609.6 mm)
1120-A-36-*	36" (914.4 mm)
1120-A-48-*	48" (1219.2 mm)
1120-A-60-*	60" (1524.0 mm)

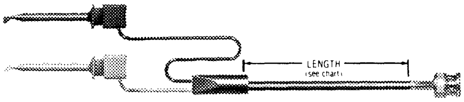


Mini-Clippers make difficult IC connections fast and easy. Banana plug features exclusive nine-leaf phosphor bronze, nickel-plated, spring and plug (3.5 mm). Multiple stacking feature. Hook-up Wire: 41/36 #20 AWG with high temperature insulation.

*Color Code: Specify -0 for Black, -2 for Red.

"MINI-CLIPPER" TEST CLIPS TO BNC MALE

No.	Length
1150-C-12-0	12" (304.8 mm)
1150-C-24-0	24" (609.6 mm)
1150-C-36-0	36" (914.4 mm)
1150-C-48-0	48" (1219.2 mm)
1150-C-60-0	60" (1524.0 mm)



Mini-Clippers make difficult IC connections fast and easy. Molded "Y" block prevents separation and contact corrosion. BNC Male Connector, MIL-C-39012, has gold-plated center contact and silver-plated body. Coaxial Cable: Shielded RG58C/U, MIL-C-17D, 50 Ohm.

"MINI-CLIPPER" TEST CLIP — BOTH ENDS

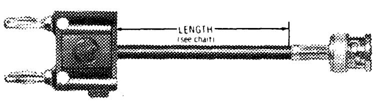
No.	Length
1111-A-12-*	12" (304.8 mm)
1111-A-24-*	24" (609.6 mm)
1111-A-36-*	36" (914.4 mm)
1111-A-48-*	48" (1219.2 mm)
1111-A-60-*	60" (1524.0 mm)

Mini-Clippers make difficult IC connections fast and easy. Spring-loaded beryllium copper conductor attaches firmly yet gently to delicate component leads and terminals. Hook-up Wire: 41/36 #20 AWG with high temperature insulation.

*Color Code: Specify -0 for Black, -2 for Red.

BNC MALE TO STACKABLE DOUBLE BANANA PLUG

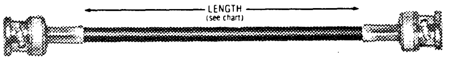
No.	Length
5070-B-12-0	12" (304.8 mm)
5070-B-24-0	24" (609.6 mm)
5070-B-36-0	36" (914.4 mm)
5070-B-48-0	48" (1219.2 mm)
5070-B-60-0	60" (1524.0 mm)



BNC Male Conductor, MIL-C-39012, features a gold-plated center contact and silver-plated body. Double Banana Plug features exclusive nine-leaf phosphor bronze, nickel-plated spring and plug (3.5 mm). Multiple stacking feature. Coaxial Cable: Shielded RG58C/U, MIL-C-17D, 50 Ohm.

BNC MALE — BOTH ENDS

No.	Length
5050-B-12-0	12" (304.8 mm)
5050-B-24-0	24" (609.6 mm)
5050-B-36-0	36" (914.4 mm)
5050-B-48-0	48" (1219.2 mm)
5050-B-60-0	60" (1524.0 mm)



BNC Male Connectors, MIL-C-39012, feature gold-plated center contact with silver-plated body. Coaxial Cable: Shielded RG58C/U, MIL-C-17D, 50 Ohm.

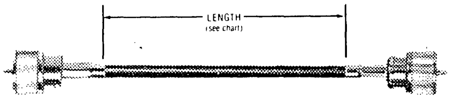
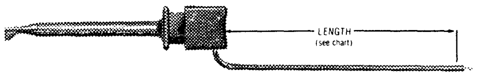
6060-B-48-0	48" (1219.2 mm)
6060-B-60-0	60" (1524.0 mm)



Crimped UHF Male Connectors feature nickel-plated brass contact. Coaxial Cable: Shielded RG58C/U, MIL-C-17D, 50 Ohm.

"MINI-CLIPPER" TEST CLIP WITH TINNED END

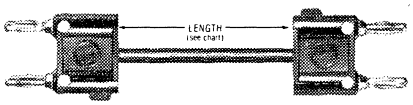
No.	Length
1149-A-12-*	12" (304.8 mm)
1149-A-24-*	24" (609.6 mm)
1149-A-36-*	36" (914.4 mm)
1149-A-48-*	48" (1219.2 mm)
1149-A-60-*	60" (1524.0 mm)



Mini-Clipper's spring-loaded hook attaches to delicate component leads and terminals. Hook-up Wire: 41/36 #20 AWG with high temperature insulation.
*Color Code: Specify -0 for Black, -2 for Red.

STACKABLE DOUBLE BANANA PLUG — BOTH ENDS

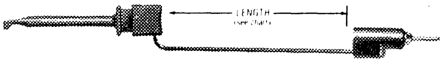
No.	Length
7070-B-12-0	12" (304.8 mm)
7070-B-24-0	24" (609.6 mm)
7070-B-36-0	36" (914.4 mm)
7070-B-48-0	48" (1219.2 mm)
7070-B-60-0	60" (1524.0 mm)



Double Banana Plugs feature exclusive nine-leaf phosphor bronze, nickel-plated spring and plug (3.5 mm). Multiple stacking feature. Coaxial Cable: Shielded RG58C/U, MIL-C-17D, 50 Ohm.

"MINI-CLIPPER" TEST CLIP TO STACKABLE .080 PIN TIP PLUG

No.	Length
1145-A-12-*	12" (304.8 mm)
1145-A-24-*	24" (609.6 mm)
1145-A-36-*	36" (914.4 mm)
1145-A-48-*	48" (1219.2 mm)
1145-A-60-*	60" (1524.0 mm)



Mini-Clipper features a spring-loaded beryllium copper conductor for maximum heat dissipation. Pin Tip Plug is nickel-plated with .163 diameter jack to accept a 3.5 mm banana plug. Stacking feature. Hook-up Wire: 41/36 #20 AWG with high temperature insulation.
*Color Code: Specify -0 for Black, -2 for Red.

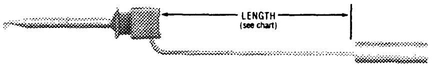
STACKABLE SINGLE BANANA PLUG — BOTH ENDS

No.	Length
2020-A-12-*	12" (304.8 mm)
2020-A-24-*	24" (609.6 mm)
2020-A-36-*	36" (914.4 mm)
2020-A-48-*	48" (1219.2 mm)
2020-A-60-*	60" (1524.0 mm)

Banana Plug features exclusive nine-leaf phosphor bronze, nickel-plated spring and plug (3.5 mm). Multiple stacking feature. Hook-up Wire: 41/36 #20 AWG with high temperature insulation.
*Color Code: Specify -0 for Black, -2 for Red.

"MINI-CLIPPER" TEST CLIP TO IN-LINE BANANA JACK

No.	Length
1125-A- 3-*	3" (76.14 mm)
1125-A-12-*	12" (304.8 mm)
1125-A-24-*	24" (609.6 mm)
1125-A-36-*	36" (914.4 mm)
1125-A-48-*	48" (1219.2 mm)



Mini-Clipper's spring loaded beryllium copper conductor provides maximum heat dissipation. In-Line Banana Jack accepts all standard banana plugs. Hook-up Wire: 41/36 #20 AWG with high temperature insulation.
*Color Code: Specify -0 for Black, -2 for Red.

PRODUCTION CAPABILITIES

Mueller Electric Company, a privately-owned corporation, enters its 76th year with 72,000 square feet of manufacturing, assembly and warehouse capacity. We invite you to call us for prompt attention to your design or manufacturing requirements for which our experience and production capabilities might be suitable. As the largest manufacturer of electrical test clips and insulators, we have developed many unique capabilities in the following areas:

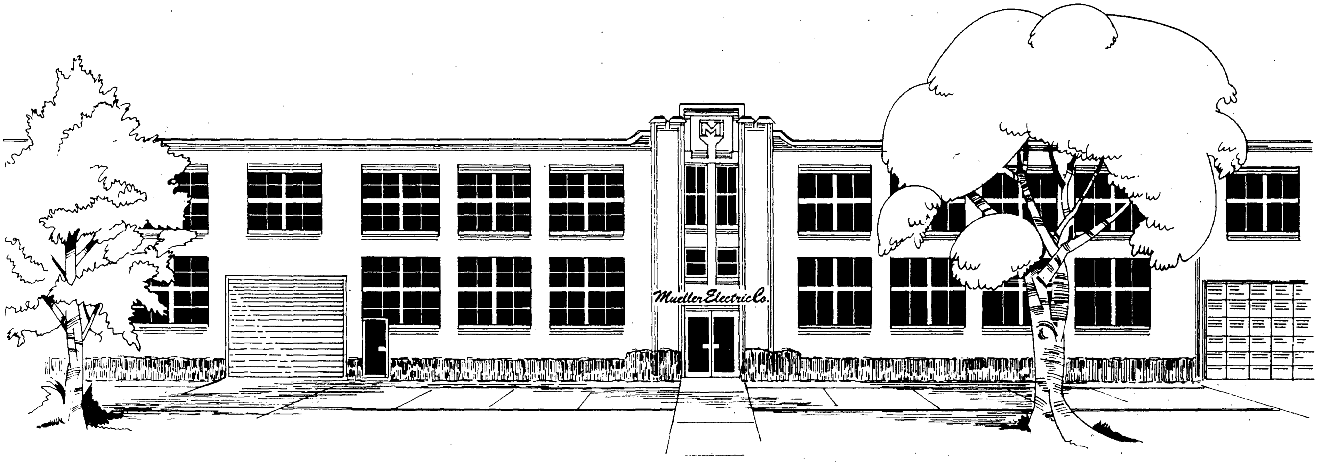
METAL FABRICATION: Our modern press department features presses ranging in size from one to fifty tons. Materials which we fabricate include alloy steels, copper, copper alloy, and stainless steel

SPRING PRODUCTION: Mueller manufactures helical and torsion springs in a variety of sizes. Materials available include hard (cold) drawn steel and music wire, stainless steel, inconel and phosphor bronze. Both strength and size can be modified to meet many special requirements.

PLATING: While we normally plate with cadmium, we also offer a wide variety of other plating techniques, including lead, chrome, chromate, nickel, zinc, tin and copper.

INJECTION MOLDING: All Mueller insulators are produced on our own molding equipment using both flexible polyvinyl chloride (PVC) and acetate. Ranging in size up to 30 ounce capacity, these machines can be used with most thermoplastic materials.

ASSEMBLY DEPARTMENT: Our assembly department features personnel who are skilled in small parts assembly. Our system can be readily adapted to include secondary or special operations.



Mueller Electric Co.

GET IT TOGETHER

COAXIAL CONNECTORS AND ADAPTERS

Quality precision connectors and adapters are available in many styles suitable for cable TV, computer, medical electronics and other applications. Special threaded and miniature types are exclusively manufactured by NT•T. Miniatures are for use where space is limited.

Male and female BNC and TNC connectors are of proprietary unique unitized construction. Male parts are crimp style. All BNC and TNC connectors meet MIL spec performance. They are manufactured for assembly to all coaxial cables including miniature styles RG174, RG178 and RG179.

Cable Assemblies utilize NT•T manufactured connectors of the highest quality. Styles include coaxial cables with BNC or TNC connectors, threaded coaxial connectors, miniature coaxial connectors, molded dual banana plugs, phone plugs, phono plugs, alligator clips, or any combination of the above. Test leads, patch cords, and special cable assemblies to customer's specifications are also available.

The varied NT•T line includes **antenna plugs and jacks, banana plugs and jacks, binding posts, test leads, fuse holders, phone plugs and jacks, phono plugs and jacks, binding post boards, interlock receptacles, lugs and brackets, terminal strips, alligator clips and PC style phono jacks.**

WITH ntt

Whether you crimp it, plug it, solder it, screw it, clip it, wrap it, interlock it, bayonet it—however you make your connection, get it together with NT•T.

PANDUIT® *HI-CON*™

The Reliability and Density You Demand In Industrial and Communications Packaging

SERIES 100 — The original standard per DIN 41612 with the female connector mounted to the backplane or motherboard and the male connector mounted to the daughter card. Versions available include Types B and ½ B (two row) and Types C and ½ C (three row) signal connectors on .100″ grid; plus Types D and F power connectors on .200″ grid.

SERIES 130 — The "inverse" counterpart of Series 100 Type C, the 130 male becomes the motherboard connector and the female is the daughter board component. This Type R interconnect lowers your backplane costs and is ideal where redesign or expandability of the system is anticipated.

SERIES 136 — Inverse (Type R) connectors with up to 195 contacts. These "stretch" or "expanded" connectors are offered in a variety of lengths and pin configurations. Consult factory with your requirements.

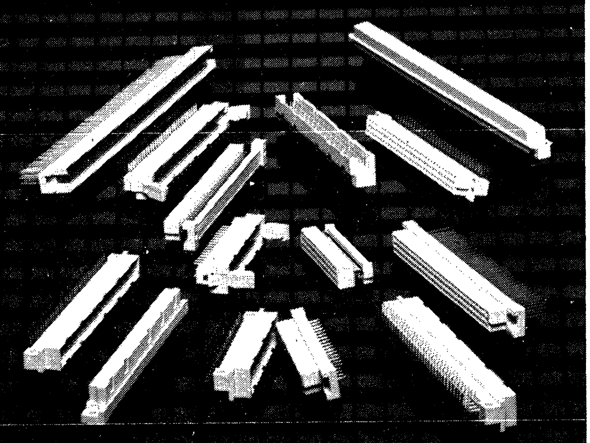
SERIES 140 — Specify this male Type R Press-Fit connector in thru-plated hole applications where you will benefit from lower board stress offered by compliant pins. Pins are replaceable from front or back of the panel with a .040±.003″ finished hole size.

SERIES 120 — For .050″ flat cable applications this line stands alone or is fully intermateable with Series 100 Types B, C and ½ C, as well as Series 130 and 140 Type R components.

HI-CON INTERMATEABILITY: Designed to meet the specifications of DIN 41612; MIL-C-55302/131,/132,/133,/134; BS 9525 F0004; IEC 603-2; VG 95324.

VMEbus: Series 100 Type C connectors are VMEbus-compatible for use in P1/P2 or J1/J2 connector applications.

HIGH DENSITY TWO-PIECE CONNECTORS



U.L. RECOGNIZED E73711

HI-CON . . . SINCE 1971 . . . A COMPLETE FAMILY OF HIGH-DENSITY TWO-PIECE CONNECTORS GROWING WITH YOUR DESIGN REQUIREMENTS.

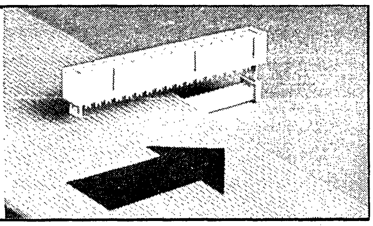
PANDUIT® *LAT-CON*™

Laterally Installed Connector System For .050″ Flat Cable



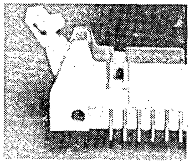
Unique open-sided socket... cable is inserted laterally! Simplifies insertion operation, improves reliability, reduces assembly time up to 75%.

The LAT-CON System provides superior terminations

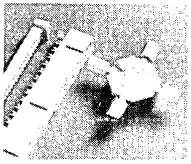
An end termination made by the LAT-CON System is shown above. Note that the cable end is recessed a controlled distance from the edge of the socket. This process ensures that the cable end is inserted far enough to provide good termination but recessed enough to protect the cable end. This eliminates rejects and rework and reduces the hazard of subsequent short circuits and potential damage to equipment.

MORE REASONS TO SPECIFY LAT-CON SOCKETS & HEADERS

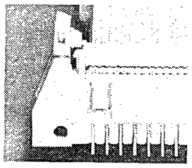
The "Coding Wedge" system



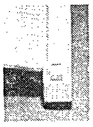
1. Break out the prescored wedge sections from the header wall.



2. Use the convenient tab to insert coding wedge into the corresponding slot in the socket wall.

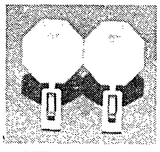


3. Repeat as necessary to meet coding requirements. Coding positions available vary with connector length.



Recessed Cover

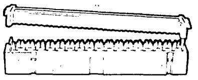
Cover recessed on both ends to permit tight cable folds in any cable entry configuration.



Mil Spec Keys

Provide MIL spec polarization. Aid in correct mating of connector and header. Two key positions in 20 circuit and larger headers.

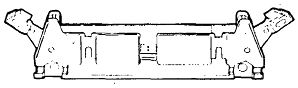
EXCLUSIVE PREASSEMBLED OPEN SIDED SOCKET



INTEGRAL METAL LOCKING CLIPS on both ends assure positive retention of cover to socket when terminated.

ONE SOCKET FOR END OR DAISY-CHAIN TERMINATIONS simplifies planning and cuts parts inventory requirements.

UNIQUE LOW-PROFILE EJECTOR/LATCH for use with or without strain relief. Saves space and reduces separate parts inventory.



FOUR WALL HEADER protects contacts and provides for unique "Coding Wedge" system.

A Complete Family of .050″ Sockets and PCB Headers

Circuit sizes offered: 10, 14, 16, 20, 26, 34, 40, 50, 60

Recommended cable: UL Style 2651

FOUR WALL HEADERS

Contacts: Brass .025″ (0.63mm) square pins. On .100″ x .100″ grid.

Contact Options: Straight or angle pins either .114″ (2.9mm) or .177″ (4.5mm) length.

Ejector/Latch Options: No latches; LAT-CON low profile latch preinstalled; MIL latch preinstalled; loose piece LAT-CON or MIL latches.

Socket Contacts: Beryllium Copper

Housing Material: Glass Filled Polyester

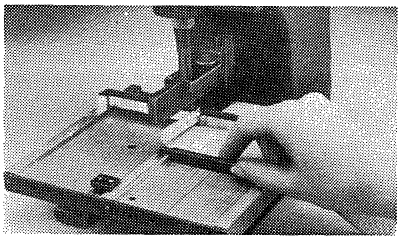
U.L. Flammability: 94V-0

U.L. RECOGNIZED E73711

Plating Options: (socket and header) fully tin plated contacts; 15 μinch selective gold over nickel; 30 μinch selective gold over nickel.

Termination presses for low to medium volume

A LAT-CON manual termination press is shown below. An open-sided socket is placed in the feed track. Then, the flat cable is located against a stop in the front of the die and moved laterally into the socket. Both the socket and cable are then slid into terminating position and the press is actuated. Typically, this takes 6 seconds or less. A pneumatic version of this press is also available.

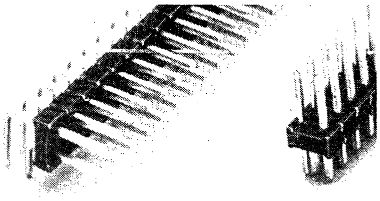


Daisychain terminations are also greatly simplified in the LAT-CON System. The cable is simply moved into the connector and the press activated. Daisychain connectors can be added even after both cable ends have been terminated and this system permits extremely close spacing of connectors on the cable (less than .1″ or 2.5 mm, wall to wall).

MIL-C-83503 INTERMATEABLE. LAT-CON sockets and headers meet the requirements of and are fully intermateable with all MIL-C-83503 products. Also meet DIN 41651 (draft) and BSI 9525F0023 (draft).

NEED FAST DELIVERY?

Call About Ship-From-Stock to 10 Days.



DUAL ROW UNSHROUDED HEADERS

Two through 64 contacts on .100″ grid. Easily cut to smaller sizes. Pins .230″ above wafer by .025″ square. Tin plated or 15 or 30 μinch gold plated available.

SOCKETS ON REELS...

For high volume applications...

In addition to the low to medium volume press, the LAT-CON application equipment line includes a high volume press which also features lateral cable insertion and automatic recessing of the cable ends. With this system the open-sided sockets are automatically fed into the back of the press from a reel of sockets on pressure sensitive tape. This equipment automatically ejects the terminated cable assembly and feeds another socket into the die, positioned for the next termination.

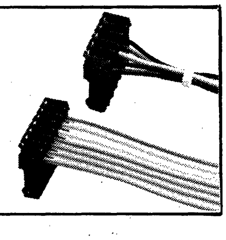
PANDUIT® *MAS-CON*®

Mass Terminated Connector System

Connectors—Headers—Installation Tools

For Discrete Wire and Flat Cable

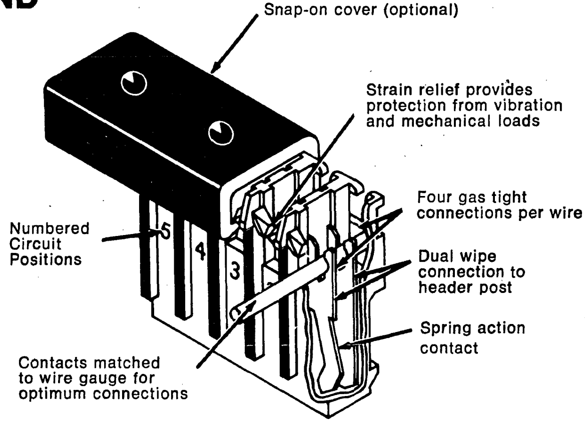


HIGH RELIABILITY AND LOWER INSTALLED CONNECTOR COSTS

Preloaded insulation displacement contacts eliminate wire stripping, individual crimping and hand loading contacts into housings.

Interchangeable with AMP and Molex.

Delivery from stock to ONE WEEK!



Snap-on cover (optional)
Strain relief provides protection from vibration and mechanical loads
Four gas tight connections per wire
Dual wipe connection to header post
Spring action contact
Numbered Circuit Positions
Contacts matched to wire gauge for optimum connections
5
4
3

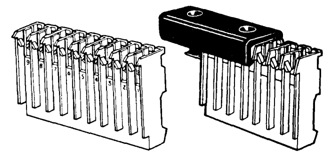
- End and through connectors accept discrete wire, notched round conductor flat cable and pre-split ribbon cable.
- Industry intermateable and stackable end-to-end.
- Female contacts are made of special brass alloy with bright acid tin or selective gold over nickel plating.
- Housings are molded of 6/6 nylon (U.L. 94V-2) with color-coded stripes to indicate contact wire gauge.

CSA CERTIFIED

U.L. RECOGNIZED E73711

.100″ (2.54mm) CENTERLINE CONNECTORS

- End and Through connectors offered with 2 through 28 circuit positions
- For 22, 24, 26 and 28 AWG wire
- Rated 300VAC/VDC, up to 4 amps with 22 AWG



Matching covers available for all connectors.

.156″ (3.96mm) CENTERLINE CONNECTORS

- End and Through connectors offered with 2 through 24 circuit positions
- For 18, 20, 22, 24 and 26 AWG
- Rated 300VAC/VDC, up to 8 amps with 18 AWG

PC BOARD HEADER ASSEMBLIES

U.L. RECOGNIZED E73711 CSA CERTIFIED

- Molded Thermoplastic wafer material is breakable for prototype or short production runs (U.L. 94V-0).
- Industry intermateable.
- Available tin plated or 15 μinch or 30 μinch gold.

.100″ CENTERLINE

- .025″ (0.64mm) square straight and angled posts.
- Two through 36 circuit positions.

.156″ CENTERLINE

- .045″ (1.14mm) square straight and angled posts or round straight.
- Two through 24 circuit positions.

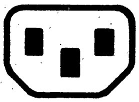
INTERNATIONAL Primary Power Connectors

Use of a primary power connector and cordset instead of a permanently installed power supply cord makes it possible for the equipment user to easily replace a cordset if it is damaged. It also makes it very easy and economical for the equipment manufacturer to supply the correct cordset for a foreign client because cordsets with a molded IEC-320/CEE-22 primary power connector are available with virtually any of the world's power plugs installed on the other end.

The IEC-320/CEE-22 connector is by far the most commonly used 3-wire (grounded) primary powef connector in North America and Europe. It is also used in Australia and Japan as well as major developing countries.

The connector illustrated at right is the most widely used of the IEC-320/CEE-22 types. Rated for use at 65°C.

65°C



The connector at right has a polarizing key which prevents insertion of "cool" cord connector above. Rated for use at 120°C.

120°C

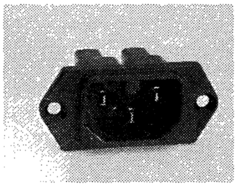
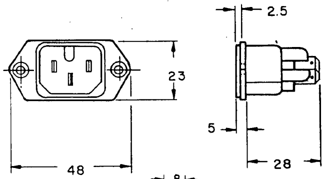
Especially recommended for new applications, this general purpose power cord receptacle is rated at 6 amps, 65°C by the European agencies and 15 amps at UL. Note that CSA certifies model 8843.FSG.40.60 at 15 amps; models 8843.FSM.40.60 and 8843.Z.40.60 at 10 amps. Mounting holes are 40 mm on center and oriented horizontally. Contacts are formed from brass strip stock and are nickel plated.

Insulator is molded from a polyamide-type thermoplastic. Weight is 9 grams.





8843.FSG.W.40.60
with 6.3 × 0.8 mm (.250 × .032 inch) solder/quick disconnect tab terminals

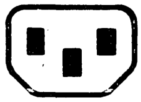
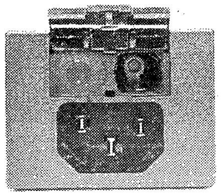
Recommended for new applications: General purpose combination single fuseholder/power cord receptacle rated at 6 amps, 65°C, for use on electrical equipment to be sold in international markets. Fuseholder is touchproof in accordance with international product safety requirements and accommodates one international 5 × 20 mm fuse with space for a spare fuse. Fuse connections are externally accessible and isolated from power connections. Contacts are formed from brass strip stock and nickel plated.

Insulator is molded from a polyamide-type thermoplastic. Weight is 14 grams.

International Combicon™





Single Fuse

INTERNATIONAL Plugs, Sockets, Socket Strips

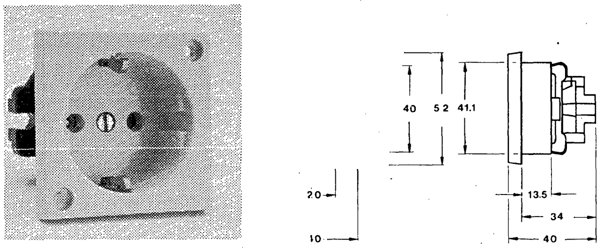
INTERNATIONAL Plugs, Sockets and Socket Strips

Plugs are also available for each of the socket standards listed below. Sockets can be used in test and burn-in racks designed for equipment that is being exported.

Contact us for a complete catalog of our line of international plugs, sockets and socket strips.

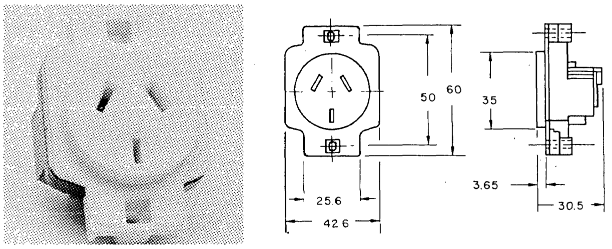
Most models stocked.

Continental European



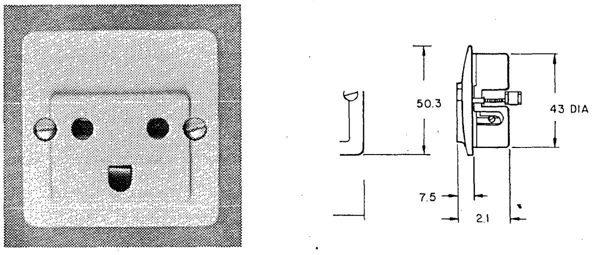
Model 88010610 (Prev. 1061): "Schuko" socket with square face plate.
Current rating: 16 amps/250 volts
Approvals: VDE, KEMA
Color: Ivory

Australian



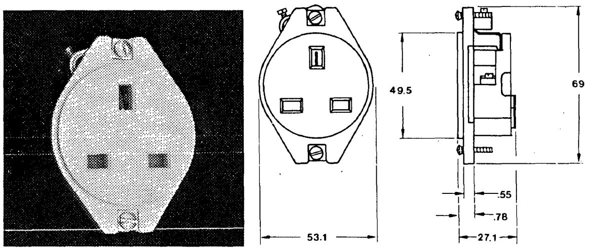
Model 88010512: This "low-profile" Australian socket replaces our old "high-profile" model 88010510.
Current rating: 10 amps/250 volts
Approval: EANSW
Color: White

Danish



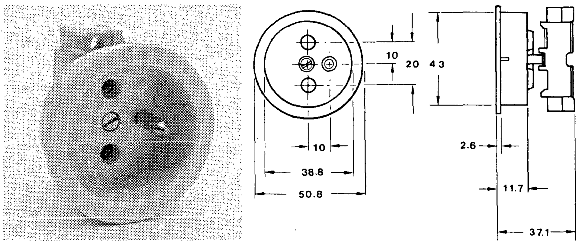
Model 88010540 (Prev. 1054): Danish socket. (Prior to January 1, 1981, Denmark used the "Schuko" German socket standard.)
Note: Although the Schuko plug (German, see our model 88010610) can be plugged into Danish socket, this presents an extreme safety hazard because the plug will not be grounded to the socket.
Current rating: 10 amps/250 volts
Approval: DEMKO
Color: Gray

British



Model 88010620 (Prev. 1062): British socket for mounting in round panel cutout conforms to BS 1363. Line and neutral contacts are shuttered to minimize the possibilities of accidental entry of an object other than the mating plug.
Current rating: 13 amps/250 volts
Color: White

French

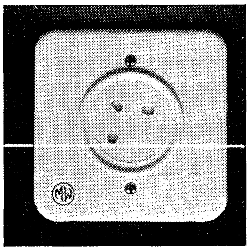


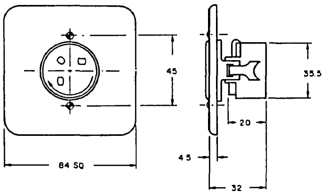
Model 88010550: French socket (mates with all PCC Continental European cords).
Current rating: 16 amps/250 volts
Color: Ivory

PANEL COMPONENTS CORPORATION P.O. Box 6626, Santa Rosa, CA 95406 • (707) 523-0600 • TX 176-747

From Panel Components Corporation

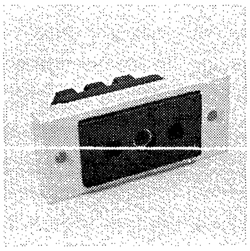
Israeli

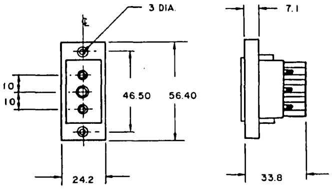




Model 88010580: Israeli socket.
Current rating: 16A/250V
Approval: SII
Color: White

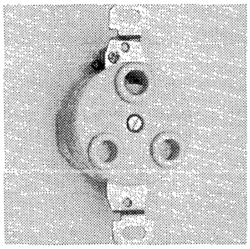
Italian

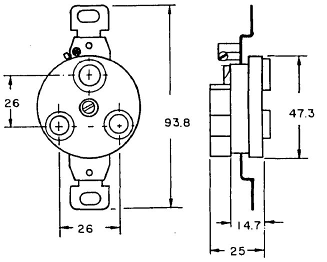




Model 88010570: Italian socket; comes with mounting bracket and hardware.
Current rating: 10A/250V (16A/250V socket also available)
Approval: IMQ
Color: Brown/Beige

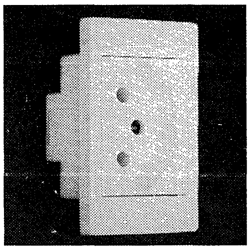
South African

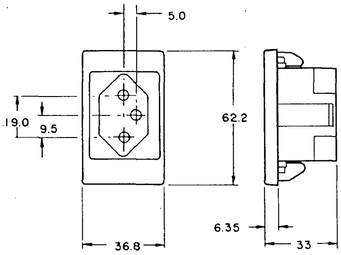




Model 88010560 (Prev. 1056): South African socket. Line and neutral contacts are shuttered to minimize the possibilities of accidental entry of an object other than mating plug. Complies with SABS 164.
Current rating: 16 amps/250 volts
Approval: SABS
Color: Ivory

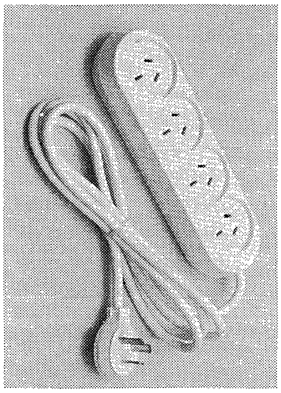
Swiss





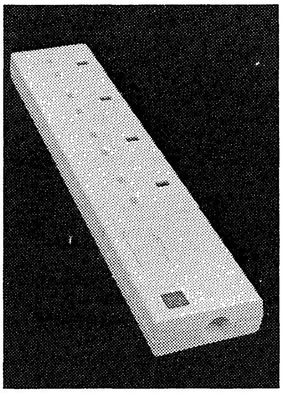
Model 88010530 (Prev. 1053): Swiss socket. It can be mounted directly on a panel, using a mounting system that does not require screws.
Currect rating: 10 amps/250 volts
Approval: SEV
Color: Ivory

Australian



Model 85010020: Australian socket strip.
Current rating: 10A/250V
Color: White

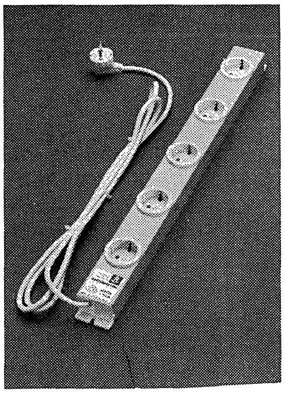
British



Model 85010321: British socket strip conforms to BS 1363. Each socket is shuttered to minimize the possibility of accidental entry of an object other than the mating plug.
Note: Cord is not provided. Made of impact resistant thermoplastic.
Current rating: 13 amps/250 volts
Number of sockets: 4
Circuit protection: 13A fuse (BS 1362)
Color: Black

European Continental

"Schuko" German



Model 85023050 (Prev. 3.002.305.2): German socket strip without switch rated at 16 amps. Cable length is 2.5 meters with VDE-approved Schuko plugs.
Color: Orange
Note: Models with rocker switch or circuit breaker also available.

Interpower™ INTERNATIONAL Socket Strip

The Interpower™ International Socket Strip incorporates seven of the world's primary socket standards in one device. Use it in burn-in racks or test labs where products with international cords or cordsets are being prepared for export. Or, use it for receiving inspection on international cords and cordsets.

These sockets are included: "Schuko" German, Danish, Italian, South African, Swiss, Australia/New Zealand, and British. Table and rack mounting styles are available.

Installation to Power Source:

The International Socket Strip is equipped with two unterminated power cords – one for connection to a 220VAC/50Hz power source; the other to a 240VAC/50Hz power source. The conductor size is 1.5mm^2 which is slightly larger than 16 AWG (16 AWG = 1.23mm^2). Each cord is 2.5 meters long and clearly marked as to voltage. The jacket and primary insulation are stripped and ready for installation to the appropriate power source. The primary insulation is color coded in accordance with international standards: green/yellow (ground); brown (line); blue (neutral).

Internal Wiring

220VAC/50Hz circuit

The cord marked "220VAC/50Hz" supplies power to these sockets:

Socket standard	Socket rating
"Schuko" (German)	16A
Danish	10A
Italian	10A
South African	16A
Swiss	10A

240VAC/50Hz circuit

The cord marked "240VAC/50Hz" supplies power to these sockets:

Socket standard	Socket rating
Australia/New Zealand	10A
United Kingdom	13A

DENMARK
SOUTH AFRICA
NORWAY SWEDEN FINLAND BELGIUM AUSTRIA W. GERMANY NETHERLANDS
ITALY
SWITZERLAND

Each circuit is rated at 16 amps maximum for all of the sockets combined.

Testing

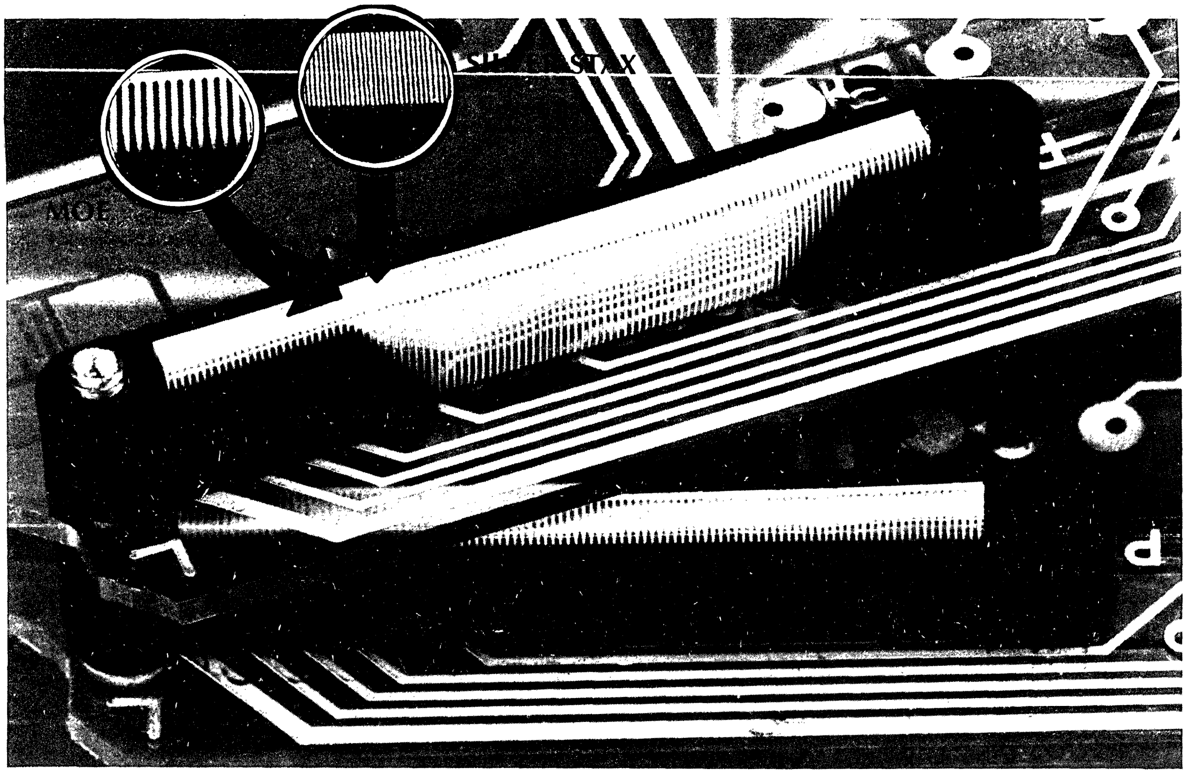
In addition to visual inspection at all manufacturing stages, each socket of both circuits is checked for correct polarity and continuity. The entire socket strip is then hi-pot tested at 2500 VAC; this test is done on each circuit between ground and line and neutral shorted together.

Delivery: Call PCC Customer Service Department for stock level.

PANEL COMPONENTS CORPORATION P.O. Box 6626, Santa Rosa, CA 95406 • (707) 523-0600 • TX 176-747

PARALLEL BOARD CONNECTOR™

PBC Series



- Connective densities as low as .15 mil centers
- Surface mount low profile connections
- Remateable for ease of assembly / disassembly
- Multi-board stacking
- Establishes reliable, gas tight contacts between any parallel substrates such as PWBs, hybrids, and flat panel displays
- Zero insertion force

DESCRIPTION

Parallel Board Connectors (PBCs) create reliable contacts between closely-spaced paths on printed circuit boards. Clamping the elastomeric elements between two or more printed wire boards yields low resistance connections, without soldering.

PCBs are available with two types of elastomeric elements — Silver STAX and MOEs (Metal-on-Elastomer). Silver STAX are composed of alternating layers of high conductivity silicone rubber and non-conductive rubber. The MOEs, the element for lowest resistance applications, consist of gold on nickel on copper traces on silicone rubber cores.

The connector housing separates the printed circuit boards, aligns corresponding traces, and positions the elastomeric elements. Redundant traces on the elastomeric connector ensure reliable contact while eliminating the need for precise placement of the element.

Several boards can be stacked and interconnected simultaneously with common mounting screws. Individual boards can be easily removed and replaced in a minimum of time.

As contact is made just to surface traces without the necessity for plated through holes, the matching footprints can be at any position on the printed wiring board.

Gas-tight seals exclude harsh environments over a temperature range of -55°C to 125°C. Silicone rubber's superior electrical properties ensure low capacitance and low dielectric loss over the entire temperature range at up to 100% relative humidity.

PCB Terminal Blocks

The Phoenix PCB Terminal Block line features the broadest selection of types available—screw clamp, single and multiple positions, double and triple level, fuse, quick connect, pluggable, spring and disconnecting types in horizontal, vertical and angled wire entry versions.

Phoenix PCB Blocks are modular, handle a wide range of wire sizes from 6 AWG to 28 AWG, and are UL and CSA approved. All Phoenix Terminal Blocks feature captive screws and copper clamping bodies for corrosion resistance and greater conductivity.

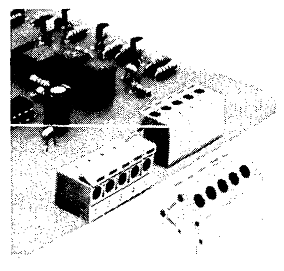
PCB Terminal Blocks

Spring Actuated Terminal Blocks for 5mm & 5.08mm pin spacing

PHOENIX CONTACT



Phoenix spring-actuated terminal blocks are available in horizontal, vertical, single, multiple, low profile and various other configurations giving you easy wire access from any direction. No special tools are required to make connections. The Phoenix spring clamp design allows for termination of either solid or stranded wires.

Phoenix spring actuated terminal blocks will take up to a 16 AWG wire and are rated for up to 10 amps at 300 volts.

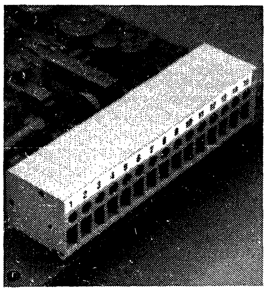
PCB Terminal Blocks

Special PC Board Terminal Blocks for 5mm & 5.08mm pin spacing

PHOENIX CONTACT



Phoenix Front 1.5 offers both parallel and perpendicular wire access to the printed circuit board. In each version the wire is inserted in the same direction as the screwdriver used to make the connection. Front and rear wiring in addition to feed-thru panel applications are simplified with the new Front 1.5 series.

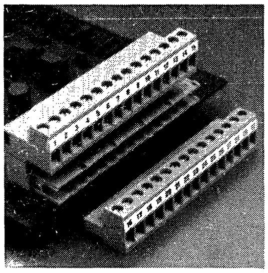
Pluggable PCB Terminal Blocks



The two piece MSTB terminal block combines the Phoenix wire clamping technique with the ease of PC Board connector pluggability. The MSTB series is UL recognized for factory and field wiring applications and CSA certified for 10 amps at 300 volts. It accepts a wide range of wires from #30 to #14 AWG. The MSTB line is available with 2 thru 24 positions in horizontal, vertical, low profile, and double level configurations.

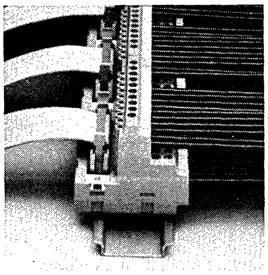
Flat Cable Interface Modules



The FLK and FLKM modules allow for interfacing between flat ribbon cable and up to #12 AWG discrete wires. The discrete wire connections are made via the proven Phoenix screw clamp terminal blocks which are rated for field and factory wiring.
The FLKM-D is used for the interfacing of cables equipped with 'D' Subminiature connectors to discrete wires.

All modules mount on any available DIN rail and can be installed individually or along with any type of Phoenix terminal block. Custom units can be made available on request.

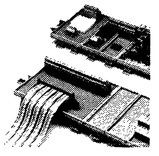
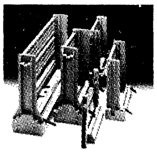
PHOENIX TERMINAL BLOCKS

Selection without equal for design flexibility



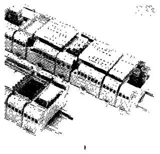
Modular Interface Components

Phoenix universal modules are multi-purpose electronic circuit and component carriers. Mounting on all types of DIN rails, they range from simple octal sockets for relays to interfaces for microprocessor outputs with solid state relays and fuses. In addition there are flat cable IDC interfaces, from 10 to 64 positions, subminiature connector interfaces, from 9 to 50 positions, and many other configurations. Size and variety is only limited by the designer's imagination. Special covers make the contents of these modules touch and contamination-proof. Custom designs are available.



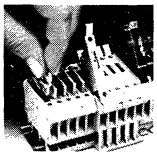
Plug-in Card Blocks

Phoenix plug-in card blocks will accept single or double Eurocards and are designed in accordance with DIN 41612 and DIN 41617 specifications. The SKBI block is a total system with card guides, clamping and releasing latches and receptacle sizes to accept 32, 48, 64 or 128 position Eurocards. The SKBD card edge block handles single-sided PCB's from 8 to 20 positions.



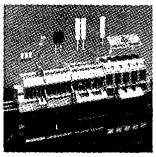
Electronic Control Systems Modules EM

EM electronic control modules include relay, diode array, varistor, LED indicator, fuse holder and custom circuit modules. All are rail mounted, eliminating the need for many off-rail mounted components and PC boards.



Fuse Blocks & Component Holders

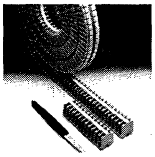
For applications that dictate using fuses, Phoenix offers a variety of fuse terminal blocks. If your design requires electronic components such as diodes, resistors, capacitors, etc., Phoenix features many configurations of terminal blocks to house these components.



UK, Universal Feed-Through 600V & 300V

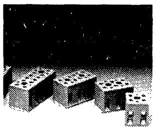
Universal Terminal Blocks are feed-through blocks with mounting feet which allow the block to be snap mounted or removed from all DIN rail types—C, flat or mini. This versatility reduces the need for stocking many different types of terminal blocks.

The versatility of the UK terminal block can be expanded by using the Phoenix accessory line.



Panel or Rail Mounted BK

BK Strip Terminal Blocks are supplied in continuous strips which can be custom cut to any length, and can be panel or rail mounted.
With a 600 volt rating, each terminal block has two walls eliminating the need for end covers. The Phoenix open construction design allows for excellent visibility of the wire connection points and easy screwdriver use.



Direct Mount G5

This series of compact terminal blocks can be mounted directly in a piece of equipment without additional hardware. Each has a fully enclosed polyamide 6.6 housing and requires one or two screws for mounting. Groups with any number of wiring positions can be formed by interlocking the built-in tongues and grooves.

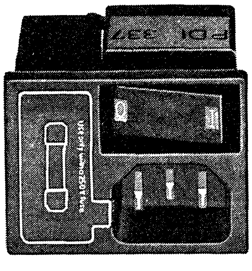
Power Dynamics, Inc.

P.O. Box 539, 59 Lakeside Avenue, West Orange, NJ 07052 • (201) 736-5722 • TWX: 136567 (PDI) • Intl. Telex: 666173 (PDI)

RFI/EMI Filtered Power Entry Modules

PDI-337

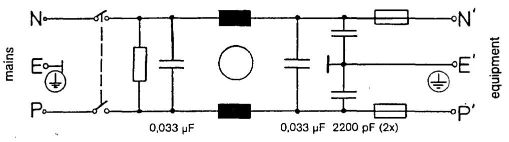


Line filters PDI 337 are a combination of IEC-connector, two-pole ON/OFF switch and a fuse holder that accepts both European 5x20 mm or 3AG American fuses in line and neutral. The top-quality filter-circuit protects electronic devices like computers, terminals and type-writers from common mode and differential mode interferences. Snap-in mounted.

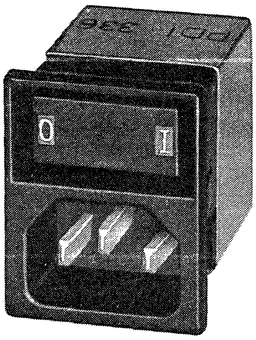
Technical data

Operatingvoltage	250 V / 50 Hz 110 V / 60 Hz
Rated current	1 A / 2 A / 3 A / 4 A / 6 A
Leakage current	<0,5 mA / 250 VAC
Temperature range	−25° C — +85° C
Test voltage (VDE 0565)	1,8 kV / 50 Hz — 2 s

Circuit



PDI-336

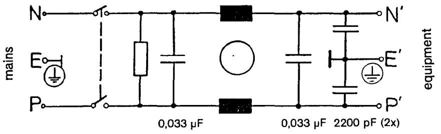


Line filters PDI 336 have an IEC-plug, 2-pole ON/OFF switch and a high quality filter circuit. They protect electronic equipment against malfunction due to fast common mode and differential mode interferences. On the load-side there are quick connect connectors 6.3 x 0.8 mm. Snap-in mounting.

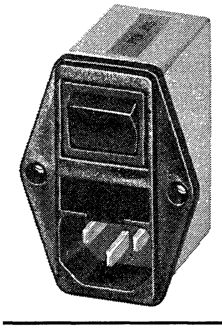
Technical data

Operatingvoltage	250 V / 50 Hz 110 V / 60 Hz
Rated current	1 A / 2 A / 3 A / 4 A / 6 A
Leakage current	<0,5 mA / 250 VAC
Temperature range	−25° C — +85° C
Test voltage (VDE 0565)	1,8 kV / 50 Hz — 2 s

Circuit



PDI-375

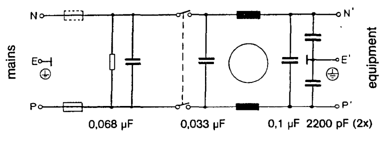


The combi-filter PDI 375 offers reduced mounting, and lowest inventory costs and protects electronic equipment from common and differential mode line interferences in the range of 10kHz up to 30MHz. The filter is equipped with IEC-plug, one or two fuses 5 x 20mm, a 2-pole ON/OFF switch and a completely enclosed metal housing.

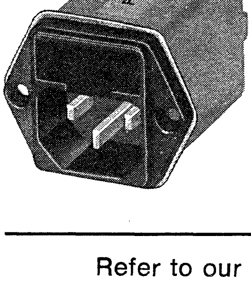
Technical data

Operatingvoltage	250 V / 50 Hz 110 V / 60 Hz
Rated current	1 A / 2 A / 4 A
Leakage current	<0,5 mA / 250 VAC
Temperature range	−25° C — +85° C
Test voltage (VDE 0565)	1,8 kV / 50 Hz — 2 s

Circuit



PDI-365

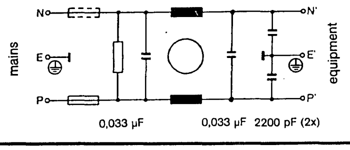


The line filters PDI 365 save cost and space by combining an IEC-plug with one or two fuses and a top-quality filter circuit (IEC 601 prescribes fusing of both lines!). A compact closed metal housing as used in all PDI main filters avoids input of high-frequent noise and prortects sensitive equipment.

Technical data

Operatingvoltage	250 V / 50 Hz 110 V / 60 Hz
Rated current	1 A / 2 A / 4 A
Leakage current	<0,5 mA / 250 VAC
Temperature range	−25° C — +85° C
Test voltage (VDE 0565)	1,8 kV / 50 Hz — 2 s

Circuit

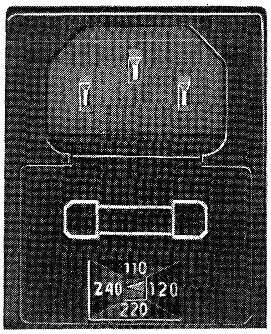


Refer to our page in the Filter Section for additional Power Dynamics Filter Entry Modules.

Power Dynamics, Inc.

P.O. Box 539, 59 Lakeside Avenue, West Orange, NJ 07052 • (201) 736-5722 • TWX: 136567 (PDI) • Intl. Telex: 666173 (PDI)

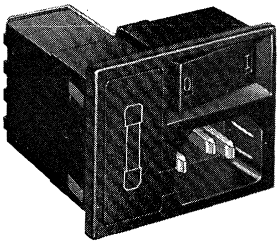
IEC POWER RECEPTACLES/CONNECTORS



G2SF
(42R40)

UL
CSA
VDE

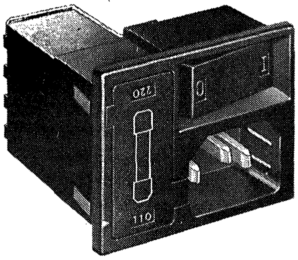
Integral combination IEC Connector, Fuse Holder & Voltage Selector. The voltage selector is designed to switch to four different voltages & provides a simple means to change transformer primary connections. Fuse Holder accepts either single or double IEC 5x20mm or U.S. ¼x1¼ fuses for maximum versatility in product applications. Fuse connections are externally accessible & isolated from power connections. Rated 6 amp & 10 amp. Connectors are available in Quick connect or Solder terminals & three physical mounting configurations.



GWS
(42R37)

UL
VDE
CSA
SEV

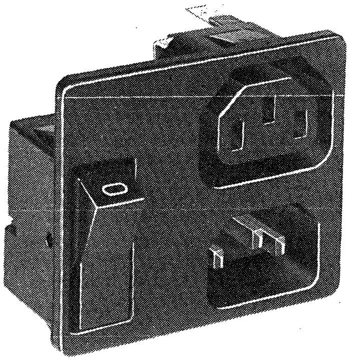
Integral combination IEC power cord connector, fuse holder and on/off switch. Designed to eliminate, discrete purchase, inventory and assembly of individual components. Meets all international safety requirements. Fuse holder accepts either Single or Double American or European fuses for maximum versatility in product applications, (not interchangeable). Fuse connections are externally accessible and isolated from power connections. Rated 6 amp and 10 amp, single or double pole snap action on/off switch. Terminal connections are Solder Lug or Quick connect, available in five terminal sizes.



GWSS
(42R39)

UL
VDE
CSA
SEV

Same features as 42R37 but with Voltage Selector. Changes voltages by rotating fuse cartridge. Meets all international safety requirements. Fuse holder accepts 3AG American or 5 x 20mm European fuses.



G2
(44R03)

UL
CSA
VDE

Integral combination male inlet IEC Connector/ female outlet Connector & On/Off Power Switch. Designed to eliminate discrete purchase, inventory & assembly of individual components. Meets all international safety requirements. Unit allows for a cost effective method of providing auxiliary power to peripheral equipment. The switch is Rated 6 amp & 10 amp, 250 volts single or double pole and is labeled with the international 1/O On/Off markings.

Fuses are not included with unit

AVAILABLE WITH QUICK CONNECT, SCREW & SOLDER TERMINALS

Any Mechanical Configurations Available in Combination with Any Electrical Configuration

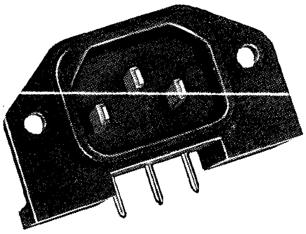
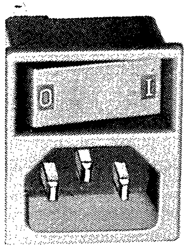
IEC POWER RECEPTACLES/CONNECTORS



GRS
(42R65)

UL
VDE
CSA
SEV
SEMKO
NEMKO
DEMKO

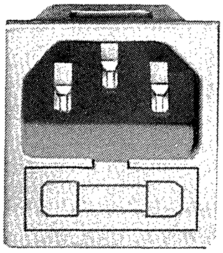
Combination Power Cord Connector with PRINTED CIRCUIT TERMINALS. Conforms with all international safety requirements. Rated 6 amp, 250V: 65°C to 120°C operating temperature. An exceptionally popular unit for Automated Assembly Operations.



GWI
(42R36)

UL
VDE
CSA
SEV

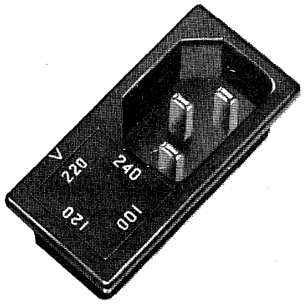
Combination power cord connector with single or double pole on/off snap action power switch. Conforms with all international product safety requirements. Designed to eliminate discrete purchase, inventory, and assembly of connector and switch. Terminal connections are Solder or Quick connect, available in five terminal sizes. Rated 6 amp and 10 amp, single pole or double pole power switch.



G2S
(42R35)

UL
VDE
CSA
SEV

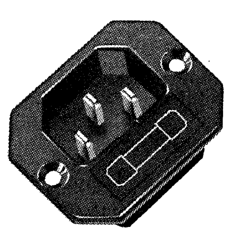
Combination single or double fuse holder power cord connector for domestic and international markets. Fuse holder is touch proof in accordance with international product safety requirements. Accepts either American or European fuse for maximum versatility in product applications. Fuse connections are externally accessible and isolated from power connections. Solder Lug and Quick connect, (terminal configurations) available in five sizes. Rated 6 amp and 10 amp with single or double fuse versions in each current rating.



GSS
(42R34)
(42R38)

UL
VDE
CSA
SEV
SEMKO
NEMKO

Integral combination IEC power cord connector/Fuse Holder/Voltage Selector. Meets all international safety requirements, and can be used throughout the world without modification at time of installation. Designed to switch voltages 100, 120, 220, 240 by removing fuse cartridge and rotating to desired voltage then snapping the cartridge back into connector housing. Fuse holder is touch proof in accordance with international product safety requirements. Series 42R34 accepts one International 5X20 mm fuse. Series 42R38 accepts one standard 3 AG American type fuse. Rated @ 6 amp and 10 amp from 65°C to 120°C operating temperature. Screw or Snap-in mount configurations.



GSI
(42R31)
(42R32)
(42R33)

UL
VDE
CSA
SEV
SEMKO
NEMKO

Combination single fuse holder/power cord connector for domestic and international markets. Fuse holder is touch proof in accordance with international product safety requirements. Accommodates one international 5X20 mm fuse with space for a spare fuse. Terminal connections: Screw, quick connect, or Solder Lug.

Rated @ 6 amp and 10 amp; 65°C to 120°C operating temperature. Fuse connections are externally accessible and isolated from power connections. Screw or snap-in mount and five mounting configurations.

Fuses are not included with unit

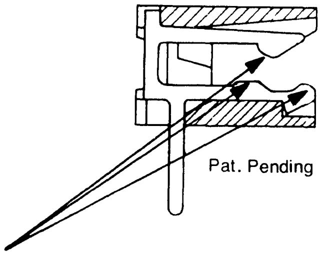
LCD CONNECTORS

Positive contact over extended periods of time at higher operating temperatures. (Replaces "obsolete" plastic contacts that may be influenced by contact pressure.)

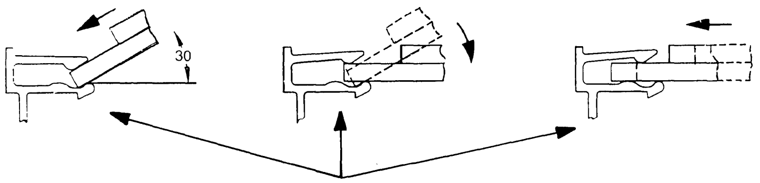
Unique Prong Type contacts provide pressure and reaction with single metal unit.

MATERIALS: Connector Body: Glass filled polycarbonate Contacts: Tin-plated Brass alloy

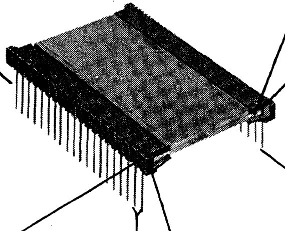
CROSS SECTION



Triple supports provide minimum plug-in pressure regardless of number of contacts. Spring mounted by rotary movement.



No injury can occur to contact surface or plating during plugging-in of display; the ultimate in contact reliability.



Up to 45 contacts available. Additional contacts available.

For LCD glass thickness of .04 through .05 ±.004. (Other thicknesses available).

LCD's do not require beveled edge on glass borders. Although LCD's are sharp, they cannot damage Power Dynamics' unique Connector Contacts.

Wide range of standard soldering pin lengths (.12, .19, .29, .41).

Molded-in contacts insure long contact life and reliability under harsh environmental conditions (as opposed to conventional type exposed contacts).

Molded shoulders insure against longitudinal movement under the most severe shock and vibration conditions. (No epoxy or bezel required for LCD retention.)

Contact pin spacing of .10.

.05 SPACING AVAILABLE (From 40 to 100 Contacts)

LCD CONNECTORS ALSO AVAILABLE FOR FLAT CABLE CONNECTIONS

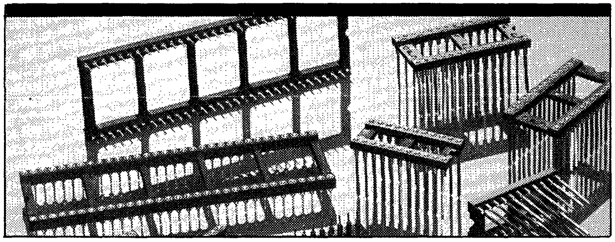
SERIES USO/UWW

OPEN FRAME LOW PROFILE DIP SOCKETS
SOLDER TAIL/WIRE WRAP TAIL



FEATURES:

Free-standing contacts provide excellent convection cooling.

High reliability and performance at a low cost.

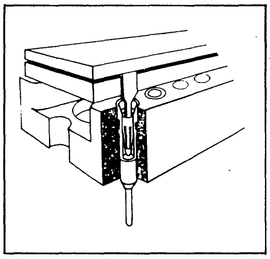
Accommodates 6 thru 64 flat lead DIP IC's or 0,41/.016 to 0,51/.021 diameter round leads maintaining high retention.

Continuous grid spacing for maximum use of PC board real estate.

Available in .018 diameter solder tail in a variety of lengths or in a .025 square tail in 3-level, 2-level or 1-level of wrap.

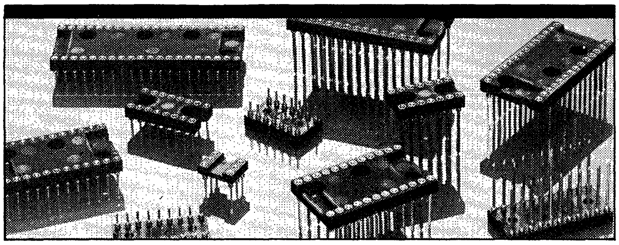
MATERIALS:

Insulator—See General Notes*
Machined socket terminals: See General Notes*



SERIES SO/WW

CLOSED FRAME LOW PROFILE DIP SOCKETS
SOLDER TAIL/WIRE WRAP TAIL



FEATURES:

High reliability and performance at a low cost.

Accommodates 6 thru 40 flat lead DIP IC's or 0,41/.016 to 0,51/.021 diameter round leads maintaining high retention.

Continuous grid spacing for maximum use of PC board real estate.

Available in .018 diameter solder tail in a variety of lengths or in a .025 square tail in 3-level, 2-level or 1-level of wrap.

MATERIALS:

Insulator—See General Notes*

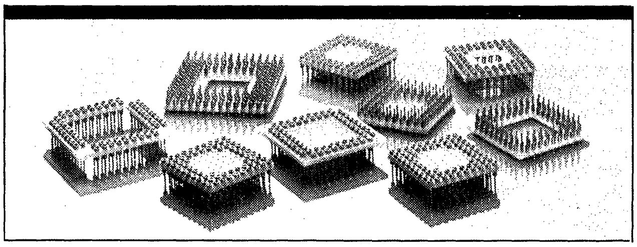
Precicontact, inc.

PIN GRID ARRAY SOCKETS



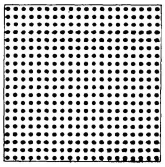
FEATURES:

Select from a large variety of configurations. Solder or wire-wrap tail styles. Special grid design upon request. Tapered entry design of contact assembly insures low component insertion and withdrawal forces.

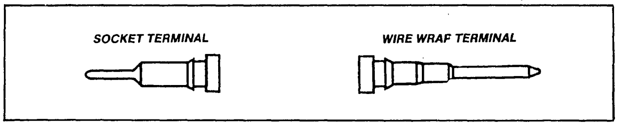
MATERIALS:

Insulator—Glass epoxy, .062 thick.
Machined socket terminals: See General Notes*

OVER 80 DESIGNS
FROM 12 TO 400 PINS

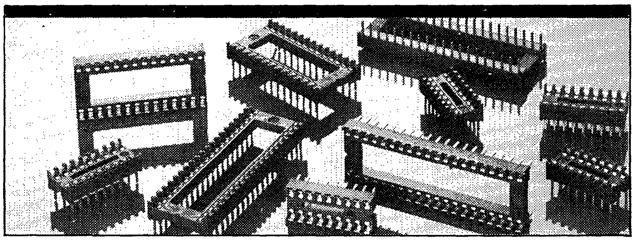


X-2020-400
400 PIN
2.000 SQ.



SERIES LSO

LOW PROFILE DIP SOCKETS
(STAMPED AND FORMED CONTACTS)



FEATURES:

Dual side wipe contacts for high reliability and constant low contact resistance.

Stackable end-to-end and side-to-side for high board density.

6 thru 40 positions.

Large target area, with tapered lead-in ramps, for easy DIP insertion.

Very Low Cost.

Housing standoffs and open frame design facilitate board cleaning.

Continuous operating temperature range −55° to 125°C.

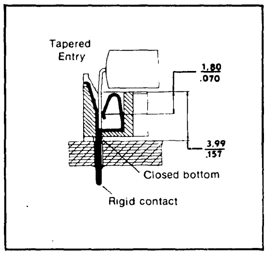
Rigid contact-terminals for easy PC-Board mounting.

MATERIALS:

Insulator—See General Notes*

Contact:
Phos. Bronze, tin-lead plating. Beryllium Copper also available

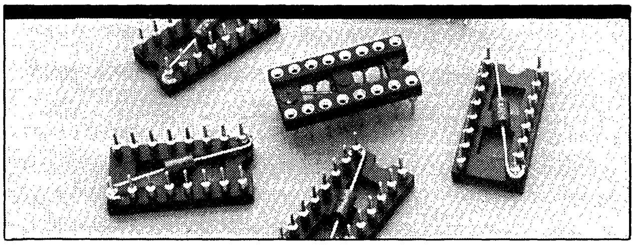
PLATINGS:
Tin
Selective Gold also available



SERIES USCAC/UWCAC

Hush Socket™

OPEN FRAME LOW PROFILE SOCKET



FEATURES:

Free-standing spring contacts provide excellent convection cooling. Provides filtering capability in the same space as a conventional socket.

Reduces need for external capacitors and reduces PC board real estate.

High reliability and performance at a low installed cost.

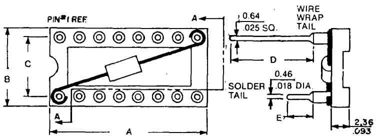
Available in solder tail and wire-wrap configurations with various tail lengths.

MATERIALS:

Insulator—See General Notes*
Machined socket terminals: See General Notes*
Capacitors—Monolythic ceramic capacitors, X7R formulation, well-suited for decoupling & filtering

SPECIFICATIONS:

Available capacitance in MFD.'s as follows:
.01, .015, .022, .047, .1
Capacitor tolerance—±10%
Working voltage—50VDC
Temperature rating −55°C to +125°C (−67°F to +257°F)

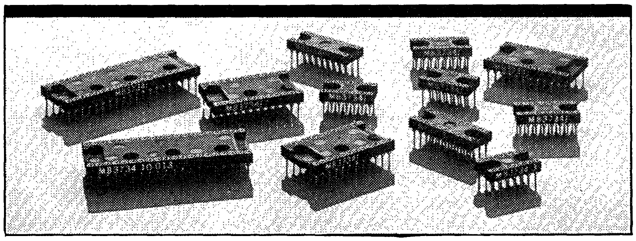


Consult factory for special applications.

SERIES SO-M

Military Approved Socket Assemblies

MIL-S-83734



FEATURES:

High reliability and performance at a low cost. Accommodates 6 thru 40 flat lead DIP IC's or 0,41/.016 to 0,51/.021 diameter round leads maintaining high retention.

Continuous grid spacing for maximum use of PC board real estate.

MATERIALS:

Insulator—See General Notes*
Machined socket terminals: See General Notes*

GENERAL NOTES ABOUT PRECICONTACT SOCKETS

Low profile Precicontact sockets are designed to meet MIL-S-83734. All socket assemblies (except Series LSO) feature four-leaf inner contact springs assembled into closed-entry, machined sockets that accept short IC leads. Inner contacts are BeCu, gold over nickel per MIL-S-45204; outer sleeves are brass, gold-over-nickel, or tin-plated. Standard insulator material is thermoplastic polyester, UL-rated 94V-O, except where noted. Contact design eliminates solder or flux wicking problems.

PRECICONTACT, INC., 835 WHEELER WAY, P.O. BOX 798, LANGHORNE, PA 19047. 215-757-1202. TELEX: 83-4253.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

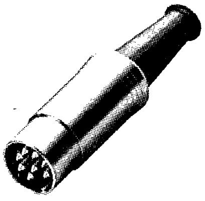
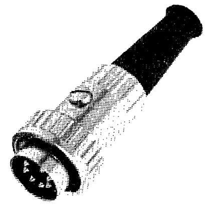
DIN CIRCULAR CONNECTORS

Preh circular DIN connectors are rugged, miniaturized connectors designed to provide reliable interconnections to peripheral equipment, test and measurement instrumentation, medical equipment, control devices, etc. Originally designed for audio applications they range from 3 to 8 contacts per connector at operating power up to 3A/34V. Preh connectors are available in nickel plated die cast Zinc alloy bodies for applications requiring durability and also in plastic bodies where durability is not a problem. Insert material is molded phenolic. Female "tuning fork" type contacts are silver plated while male pins are tinned. Connectors and contacts can be custom plated to customer specification.

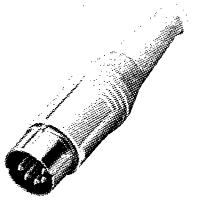
PLUGS



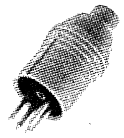
CORD PLUG
Extended Barrel
Series 71408
For cable-to-cable or cable-to-panel applicatons not requiring "locking" type connection.



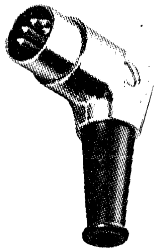
CORD PLUG
Locking
Series 71430
Cable-to-cable or cable-to-panel termination with 30° locking ring. Heavy duty cable clamp with flexible black cable sleeve.



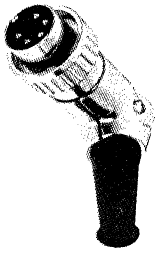
CORD PLUG
Cable & Sleeve
Series 71428
Economical connector for applications not requiring the metal bodies. Standard color is gray with gray cable sleeve.



CORD PLUG
Plastic Shell
No Sleeve
Series 71414
Useful in limited access applications. Standard color is gray with gray cable sleeve.

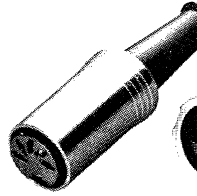


RIGHT ANGLE
8 Position Barrel
Series 71432
Right angle configuration for limited space applications. Barrel can be set for 8 cable approach angles.

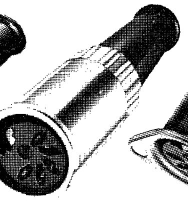


RIGHT ANGLE
8 Position Barrel
Locking
Series 71434
Right angle design 8 position barrel and locking ring. Polarized body and grounding contact insure proper connection.

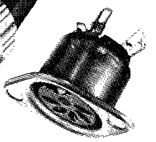
RECEPTACLES



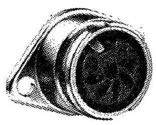
CORD RECEPTACLE
Series 71502
For normal cable-to-cable or cable-panel applications. Nickel plated, die cast metal shell with flexible black cable sleeve.



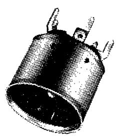
CORD RECEPTACLE
Locking
Series 71506
Mates with males equipped with 30° locking rings. Die cast body with nickel plated finish.



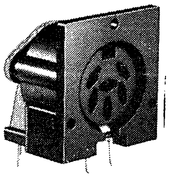
PANEL MOUNT
Series 71200
Receptacle designed to mate with males having shielded or extended bodies. Drawn metal recessed shell includes grounding contact.



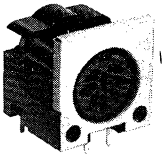
PANEL MOUNT
Locking
Series 71206
Extended die cast shell has locking flange for males with 30° locking rings. Automatic grounding protects equipment.



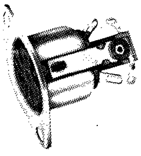
BOARD MOUNT
Series 71204
Direct mounting to PC boards. Drawn metal shell automatically grounds to protect equipment.



BOARD MOUNT
Series 71222
Mounts directly to PC board, mating plugs connect at 90° to board surface. Black plastic body with grounding contact.



BOARD MOUNT
EMI/RFI
Shielded
Series 71222
Metal flange on face is used as a common ground between mated connectors to board and chassis. Provides 360° shielding.



PANEL MOUNT
Disconnect
Contact
Series 71210
Shell carries an insulated "disconnect" contact that is activated by the mating plug.

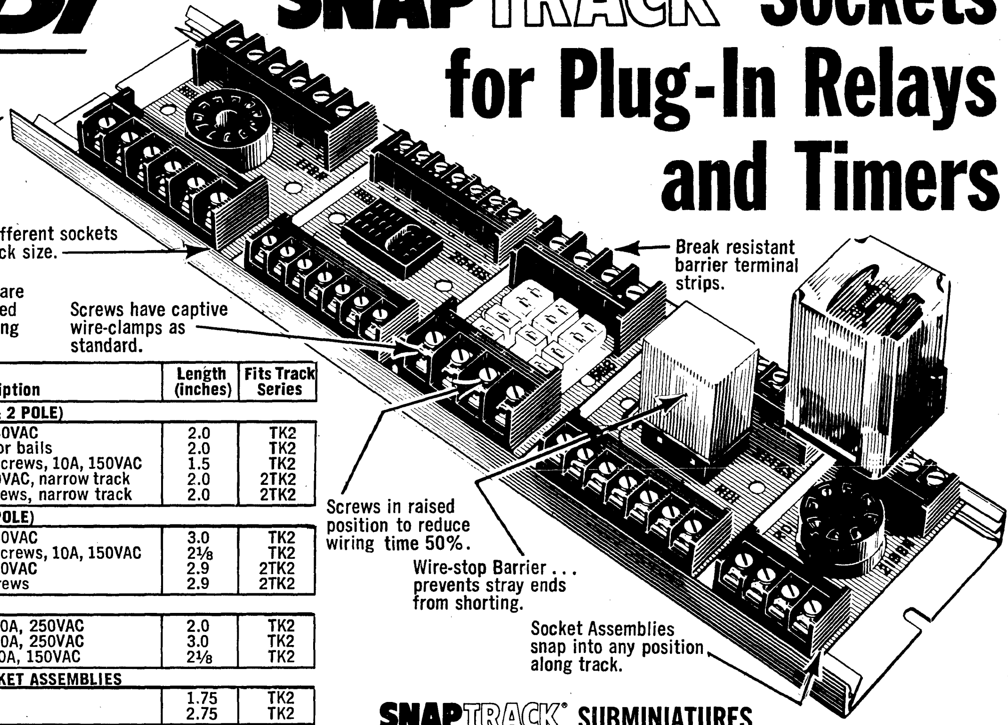
PEI is a wholly owned subsidiary of Preh Elektrofeinmechanische Werke, Bad Neustadt a/d Saale, West Germany with offices and plants in Germany, Austria, Portugal, and Singapore.

AUGAT® RDI®

Quality and Innovation

SNAPTRACK® Sockets for Plug-In Relays and Timers



PVC non-conductive track up to 48″ long. Mounts quickly.

Over 50 different sockets fit one track size.

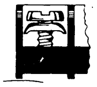
Screws have captive wire-clamps as standard.

Break resistant barrier terminal strips.

Screws in raised position to reduce wiring time 50%.

Wire-stop Barrier . . . prevents stray ends from shorting.

Socket Assemblies snap into any position along track.



All SNAPTRACK assemblies are shipped with screws in raised position which reduces wiring time as much as 50%.

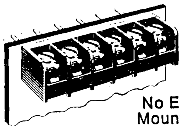
Tri-Barrier Terminal Blocks for PCB's

RESILIENT THERMOPLASTIC

- Back Barrier safeguards components from field wiring, stops shorting of adjacent wires.
- Wire-clamping plate screws secure 2 different gauge wires without wire lugs.
- Stand offs allow cleaning flux from top side of pcb.
- Screws in wire-ready raised position.
- UL grade (94V-0) polypropylene.



No Extra Mounting Required

VERTICAL MOUNT

SPECIFICATIONS

BARRIER MATERIAL: Flame Retardant Nyon, U.L. 94V-0 flammability, working temperature of 105°C, black color standard. Colors on special order.

TERMINALS: Bright acid-tin plated brass.

SCREWS: Cadmium plated 6-32 steel undercut binderhead. Brass and screws with wire clamp plates available on special order.

RATING: JB6 Series: 20 Amperes, 300 Volts.
JB7 Series: 20 Amperes, 600 Volts.

WIRE RANGE: 12-22 AWG.

APPROVALS: UL recognized File No. E54800. Guide XCFR2. CSA certified, File No. LR30811, Guide 184-N-90.

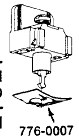
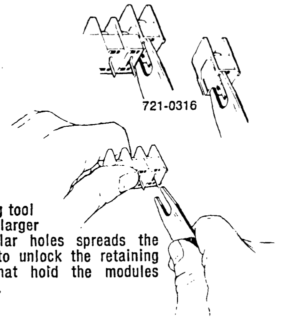
RETAINING CLIPS

Spring metal retaining clips fit around insulating barrel to mount blocks to panels without the need for mounting holes.



TAKE APART TOOL



Inserting tool into the larger rectangular holes spreads the plastic to unlock the retaining barbs that hold the modules together.

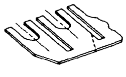
JUMPERS



J6 Series Jumper

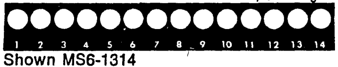
For connecting adjacent terminals. Available in two thru nine positions. To order: Catalog Number J6-2 is a two position jumper, J6-3 is three positions, and so on.

MARKER STRIPS

Alternate to hot stamping for terminal identification. U.L. grade vinyl with silk screened epoxy ink.

Catalog Number Code
MS6 — 1314

Pin Spacing	Print Style		No. Position
6 .375	0. No Printing	1. PC Pin, no end mtg	02 = 2
	1. Bot. Forward	2. PC Pin, end mtg	03 = 3
	2. Top Forward	3. Insul., no end mtg	10 = 10
	3. Bot. Reverse	4. Insul., end mtg	
	4. Top Reverse	5. Surface, end mtg	

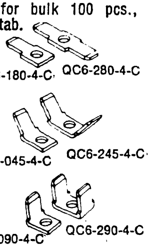


Shown MS6-1314

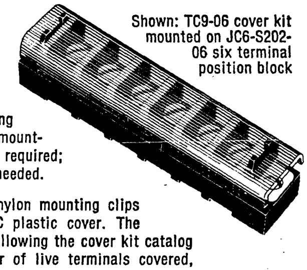
Shown: MS6-1114

TOP HARDWARE

Quick connect tabs available in single and double tab, 3/16" and 1/4" wide. Cat. Nos. shown are for bulk 100 pcs., 1/4" tab.



COVER KITS



Shown: TC9-06 cover kit mounted on JC6-S202-06 six terminal position block

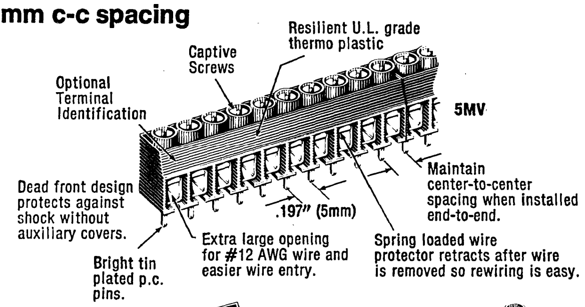
Used to protect against accidental shorting of terminal screws. End mounting feet on the block are required; specify when feature is needed.

Cover kit includes two nylon mounting clips and the translucent PVC plastic cover. The two digit dash number following the cover kit catalog number specifies number of live terminals covered, not total number of plastic positions. Order TC9-XX for JC6 series, TC2-XX for BC6 series.

Example: TC9-04 specifies a cover kit for a terminal block with end mounting holes. Would fit JC6-P2022-04 block.

Subminiature Blocks

5mm c-c spacing



Resilient U.L. grade thermo plastic
Captive Screws
Optional Terminal Identification
5MV
Maintain center-to-center spacing when installed end-to-end.
Dead front design protects against shock without auxiliary covers.
.197" (5mm)
Extra large opening for #12 AWG wire and easier wire entry.
Spring loaded wire protector retracts after wire is removed so rewiring is easy.
Bright tin plated p.c. pins.

GENERAL SPECIFICATIONS

Rating: 15 Amperes, 250 Volts U.L., 10A, 300V. or 15A, 150V. CSA.

Air Gap: 4mm minimum

Breakdown Voltage: 3000 Volts, Minimum

Barrier Material: Polyamid 6/6, U.L. approved, UL 94V-0, flammability classification, 105°C, green.

Terminals: Box type with spring loaded wire protector, brass, bright-tin plated.

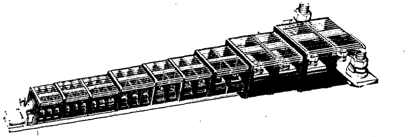
Screws: M2.5, steel, passivated zinc plated.

Wire Range: 12-22 AWG.

Approvals: Creepage and air distance designed to VDE 0110. U.L. recognized and CSA certification.

Power Blocks

rail mount, all fit one size, heavy duty track



@ 600V	Description	Cat. No.
15 amps	Block, 1.38w x 1.34h x .35Th	F-15
20 amps	Block, 1.38w x 1.44h x .41Th	F-20
35 amps	Block, 1.38w x 1.44h x .47Th	F-25
45 amps	Block, 1.77w x 1.61h x .61Th	F-35
60 amps	Block, 1.77w x 1.73h x .73Th	F-60
70 amps	Block, 1.89w x 1.87h x .83Th	F-80
125 amps	Block, 2.38w x 2.09h x 1.06Th	F-125
200 amps	Block, 2.95w x 2.36h x 1.77Th	F-200
300 amps	Block, 2.95w x 2.36h x 1.77Th	F-300
400 amps	Block, 3.54w x 2.76h x 2.28Th	F-400
600 amps	Block, 7.07w x 2.76h x 2.28Th	F-600

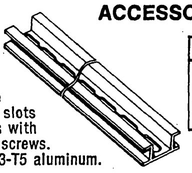
Models F-15 thru F-125 require one end barrier per group. Aluminum track 39.37" long is BLF-1000. Covers and marker strips available.

ACCESSORIES

MOUNTING RAIL

All blocks fit this one size rail.

Heavy duty gauge with pre-punched slots on .79 in. centers with clearance for #8 screws. Extruded of A6063-T5 aluminum.



Cat. No.	Length	Std. Pack
BLF-1000	1 Meter (39in.)	10
BLF-24	24 in.	10
BLF-12	12 in.	10
BLF-6	6 in.	10

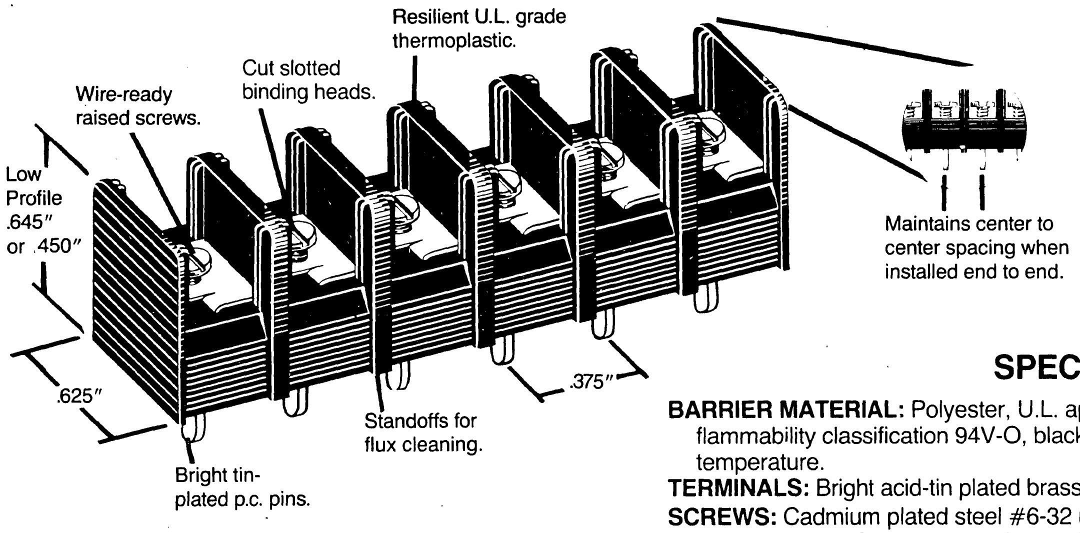
Quality and Innovation

Barrier Terminal Blocks Models LC6 and MC6



Resilient U.L. grade thermoplastic.
Cut slotted binding heads.
Wire-ready raised screws.
Low Profile .645″ or .450″
.625″
.375″
Standoffs for flux cleaning.
Bright tin-plated p.c. pins.
Maintains center to center spacing when installed end to end.

Choice of two low profile barriers:

.645 and .450 inches

GENERAL SPECIFICATIONS

BARRIER MATERIAL: Polyester, U.L. approved flammability classification 94V-O, black, 130°C operating temperature.
TERMINALS: Bright acid-tin plated brass.
SCREWS: Cadmium plated steel #6-32 under-cut binding head standard. Steel screws with captive wire-clamp washers. Brass screws available as an option.
RATING: LC6 Series: 20 Amperes, 300 Volts, U.L. & CSA. MC6 Series: 20 Amperes, 250 Volts, U.L. & CSA.
WIRE RANGE: 12-22 AWG.
APPROVALS: U.L. recognized, File No. E54800, Guide XCFR2. C.S.A. certified, File No. LR30811, Guide 184-N-90. VDE 0110 acceptable.

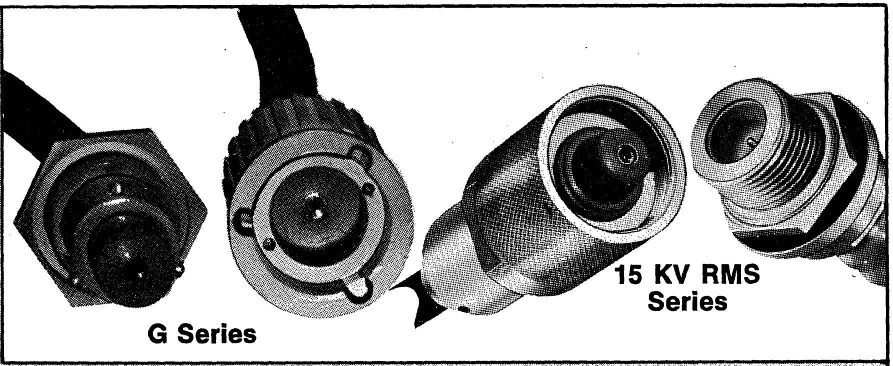
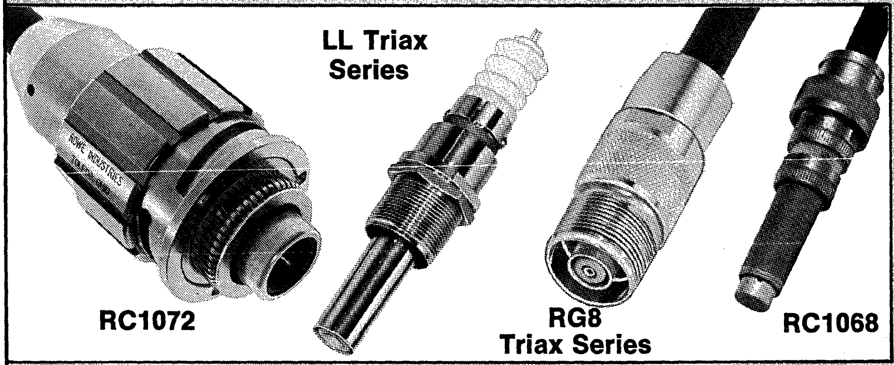
Rowe
Coaxial
Connectors and Cable Assemblies

Employ high-voltage, corona-free design techniques. They are ideal for use in pulse as well as DC voltage applications, through 150 KV. A wide variety of molded-on or field assembly types are offered. Available in quick disconnect or screw couplings.



G Series
15 KV RMS Series



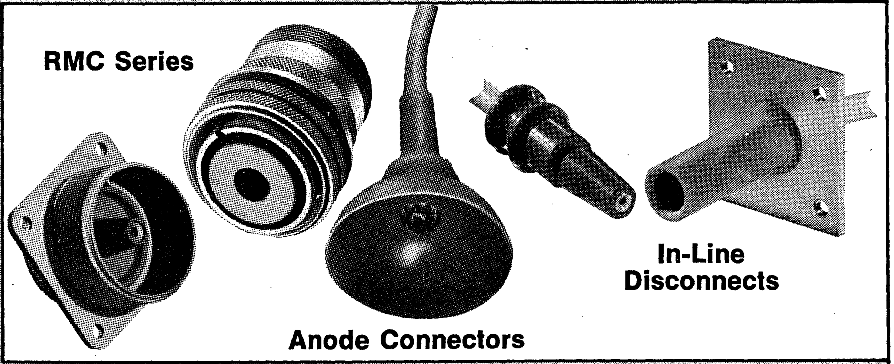
LL Triax Series
RC1072
RG8 Triax Series
RC1068

Rowe
Triaxial
Connectors and Cable Assemblies

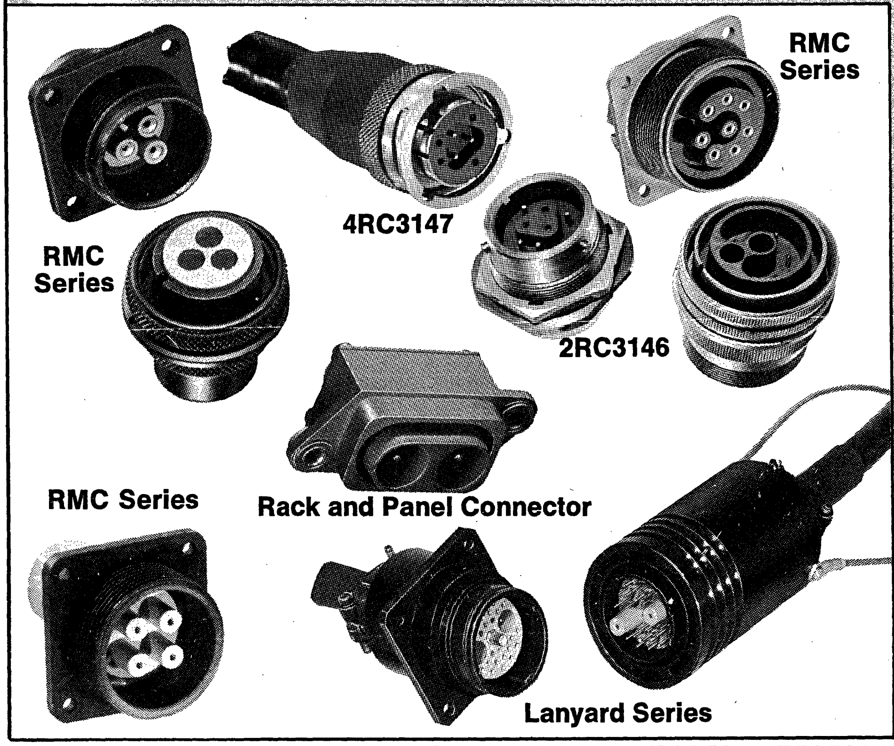
A full spectrum of both molded-on and field assembly types are available for a wide variety of cable types such as the triaxial version of RG-8, up through and including specialized construction for operation in excess of 100 KV.

Rowe
Single Contact
Connectors and Cable Assemblies

Offered is an extensive listing of single contact high-voltage assemblies, which include anode connectors, in-line disconnects and others which are used unshielded to solve your simple high-voltage interconnection problems.



RMC Series
In-Line Disconnects
Anode Connectors



RMC Series
4RC3147
RMC Series
2RC3146
RMC Series
Rack and Panel Connector
Lanyard Series

Rowe
Multiple Contact
Connectors and Cable Assemblies

Offer contact arrangements from one to thirty contacts, panel receptacles, cable plugs, rack and panel combinations, in-line types and many others. Both field assemblies and molded-on types are standard in this line.

Rowe Industries has designed and developed over 700 specialized interconnections for which tooling is available.

World's Leader in High-Voltage

(through 200 KV)

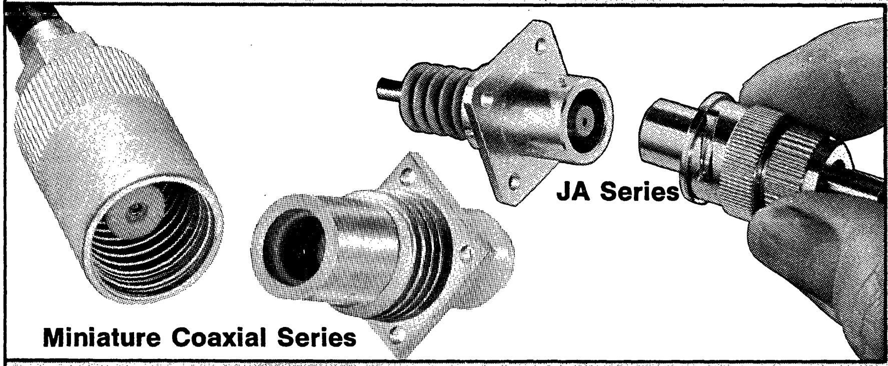
DESIGN — DEVELOPMENT — MANUFACTURING

For reliable high voltage and all temperature wire and cable, see Rowe's ad in the Wire/Cable/Harnesses Section.

FOR YOUR COMMERCIAL, INDUSTRIAL OR MILITARY DESIGN NEEDS

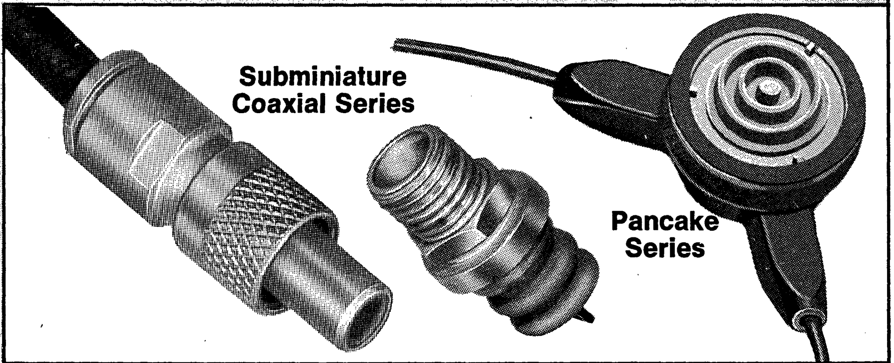


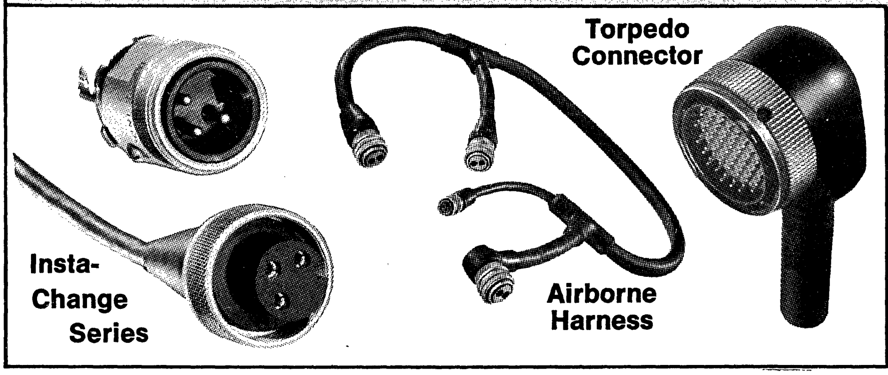
Rowe Miniature Coaxial Connectors and Cable Assemblies

Employ the same high-voltage design techniques as the coaxial series, but are much smaller in size for use in restricted spaces. Available in quick disconnect and screw couplings (the JA Series can be adapted to such standard type cables as RG 58 and RG 59).

Rowe Subminiature Coaxial Connectors and Cable Assemblies

Are ideally suited for use where space is at a premium. Employing the traditional Rowe high capability features, the subminiature sizes offer unusually high voltage operating capabilities, through 20 KV.

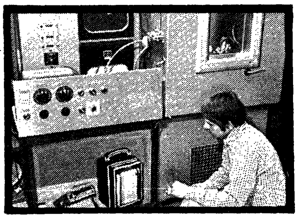




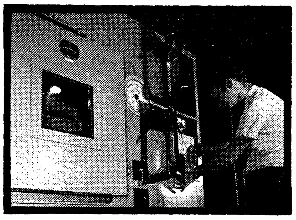
Rowe Low-Voltage, Molded-On Connectors and Cable Assemblies

For use in severe environments. We can mold your STD connectors to cable for an environmental seal and provide a molded strain relief. Our exclusive Insta-Change series was designed for factory, mining, nuclear and oil well use.

ROWE knows Specialized Interconnections

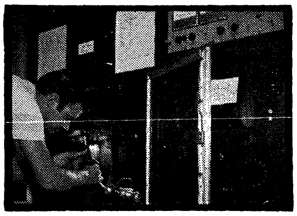


Life testing facilities.

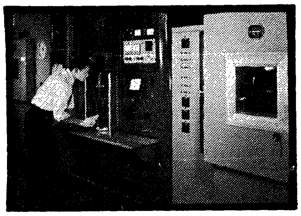


High altitude pressure chamber.

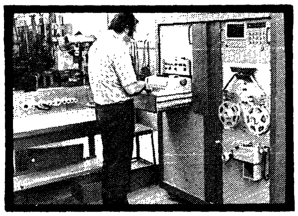
RFI-EMI-EMP test chamber.



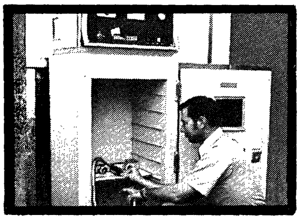
High voltage, corona and dielectric test chamber.



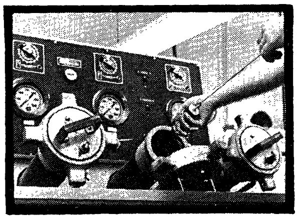
Humidity chamber.



DIT-MCO computerized random access testing.



X-Ray equipment.



Hydrostatic pressure testing.

We're specialists in complete interconnection systems and, in particular, connectors and cable assemblies for extreme environments and unique applications. In fact, we've designed and manufactured hundreds of different connectors and cable assemblies for nuclear instrumentation and control, high voltage, corona-free thru 200 KV+, underwater instrumentation, geophysical, high and low temperatures, corrosive environments, high altitude and deep space, high and low pressures and other sophisticated military and industrial systems.

Rowe engineers design and specify custom products to meet exacting requirements and Rowe craftsmen produce them to the highest quality standards. In addition, we operate one of the most complete testing facilities in the industry. Our destructive and non-destructive testing capability includes:

Electrical Testing
Dielectric strength, corona measurement, RFI/EMI and DIT-MCO computer controlled circuit testing.

Mechanical and Physical Testing
Plating verification thru microscopic analysis, shock and vibration, hydrostatic pressure and helium leak, tensile strength, contact force measurement, optical comparitor equipment, complete x-ray lab.

Environmental Testing
Altitude thru 150,000 feet, temperature, humidity, corrosive atmospheres, accelerated life combining various conditions simultaneously.

Quality Control
Rowe's quality control and inspection systems meet or exceed MIL-Q-9858, ISR-1, NRC's 10CFR50 appendix B and standards of all aerospace and industrial firms.

With so many interconnections to choose from, chances are that we've already developed the one that meets your needs. If not, we'll custom design one for you.

Rowe Industries, Dept. 241/6100 Benore Rd, Toledo, OH 43612

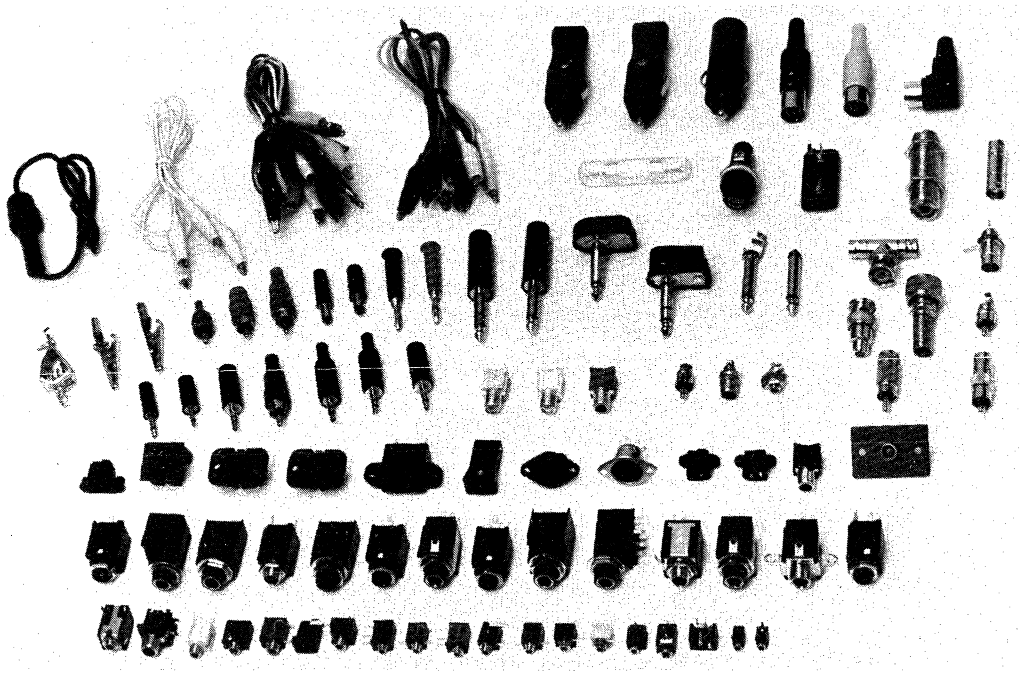
The products illustrated and listed are only a small representation of the full range of items available.



PLUGS, JACKS and CONNECTORS

PHONE PLUGS

Straight or right angle, with or without handle, 2.1mm, 2.5mm, 3.5mm or 6.3mm diameters. Produced for soldering, crimping or molding.

DC POWER PLUGS

Available straight or right angle in short or long barrel versions, 2.1mm or 2.5mm diameters. Designed for all types of power supplies.

PIN DIN TYPE PLUGS

Male or female, 2-8 pins in any array. Produced with or without handle, in any color. Also available premolded, crimped or soldered to cable in a variety of materials and lengths.

RCA PHONO PLUGS

With removable plastic or metal handles. Right angle or straight, male or female, either crimping, soldering or molding types may be specified.

BANANA PLUGS

Specifically for test lead sets. Produced in a variety of colors, sizes and shapes.

AUDIO JACKS and SOCKETS

A wide selection in any combination of 2 or 3 conductor, mono or stereo, open or closed circuits, open or closed frame. Produced in microminiature, subminiature and miniature sizes with extra low profile and minimum width. Mountings are panel, chassis or PC board.

AUTOMOTIVE PLUGS

Cigarette plugs and mating sockets, with or without fuses. Phenolic/bakelite or rubberized plastic with optional finger grips.

DC POWER JACKS

Mating with all types of power supplies, right angle or vertical, chassis or PC board mount. Pins are long or short in 2.1mm and 2.5mm diameters.

DIN SOCKETS

A full line for many applications available in 2-8 pins, shielded or unshielded for right angle, vertical or PC mounting. Standardized for use with all types of display terminals.

AC SOCKETS

UL/CSA and VDE approved for US and European use. Two or three pin configuration, panel and chassis mounting or in-line positioning.

COAXIAL

Plugs, jacks and adaptors, single or double type push-on, crimp or solder connections of BNC, UHF or "F" type to specified cable.

ALLIGATOR and BATTERY CLIPS

With or without boots or molded handles in 5 to 30 amp ratings. All colors available.

FUSE HOLDERS

For chassis, panel or in-line mounting, crimped or soldered. UL approved units are available.

MODULAR JACKS, CONNECTORS and ACCESSORIES

MODULAR JACKS

Ideal for any telecommunication application. Available with PC pins or lead wires, keyed or unkeyed with spade lugs or any specified termination. May be ordered with perpendicular, parallel flange or flangeless mounting and 4, 6 or 8 positions with any number of contacts. Manufactured to industry standards in flame retardant materials and offered with 15U, 30U or 50U hard gold plating. Can mate with handsets or line cords.

MODULAR CONNECTORS

An extensive line of modular adaptors, duplex and triplex adaptors, in-line couplers, retrofit plugs, wall-mount surface jacks, circular wall jacks. Manufactured in standard or special colors and all industry standards.

HANDSET and LINE CORDS

May be ordered to your specifications — any length, with or without shielding, tinsel or stranded/solid copper wire, color coding and with any termination including modular plugs, spade lugs or special connectors. Coiled cords can be produced to any extended or retracted length.

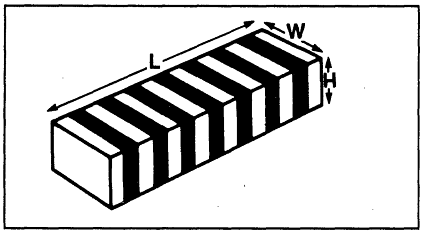
ELASTOMERIC CONNECTORS

Shin-Etsu Polymer

SP America, Inc.
1181 North Fourth Street, San Jose CA 95112
(408) 947-0311 TWX 910-338-2220

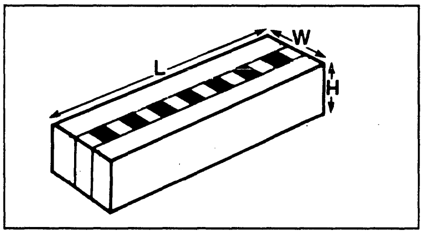


S The S-Connector consists of alternating segments of conducting and insulating solid silicone rubber. It is most often used for connections in LCD watches and clocks, calculators, and measuring instruments.

More than one conducting segment makes contact at a time. The S-Connector's small pitch means that less time-consuming precision alignment is required during assembly.

SPECIFICATIONS

Pitch	0.25mm (.010"), 0.18 (.007) 0.1 (.004), 0.05 (.002), 0.03 (.001)
Length	370mm (14.569") max
Height	0.5mm (.020") min
Width	0.3mm min

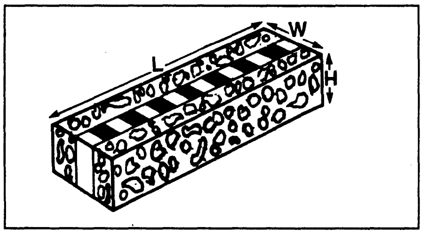


SS The SS-Connector consists of a narrow strip S-Connector material, supported on both sides with soft yet solid silicone rubber. The SS-Connector is used without a retainer, and requires only slight pressure to make a reliable contact because of the soft silicone rubber.

This connector is ideal for connections between PCBs and LCDs and other devices.

SPECIFICATIONS

Pitch	0.25mm (.010"), 0.18 (.007) 0.1 (.004)
Length	370mm (14.569") max
Height	0.8mm (.032") min
Width	1.5, 1.8, 2.0, 2,3, 2.6, 3.0, 3.5, 4.0mm

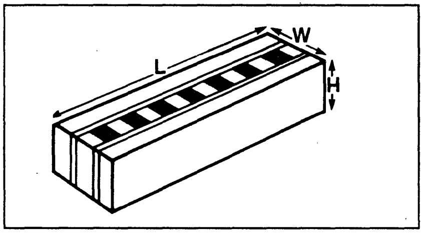


SG The SG-Connector consists of a narrow strip of S-Connector material, supported on both sides by sponge silicone rubber. The soft, closed-cell sponge forms a seal over electrodes, protecting them from humidity and harsh environments.

The soft sponge requires only slight pressure for a reliable connection, making the SG-Connector ideal for use between PCBs and large flat panel displays.

SPECIFICATIONS

Pitch	0.25mm (.010"), 0.18 (.007) 0.1 (.004)
Length	370mm (14.569") max
Height	0.8mm (.032") min
Width	1.5, 1.8, 2.0, 2,3, 2.6, 3.0, 3.5, 4.0mm

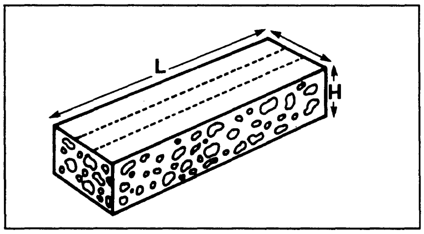


SSK The SSK-Connector consists of alternating layers of conducting and insulating silicone rubber. These soft connectors have a minimum pitch of only 0.03mm, allowing the highest density connections possible with elastomeric interconnectors.

The soft sponge silicone requires only slight pressure for a reliable connection, making the SSK-Connector ideal for use between PCBs and large LCDs with high-density displays.

SPECIFICATIONS

Pitch	0.1mm (.004"), 0.05 (.002) 0.03 (.001)
Length	370mm (14.569") max
Height	0.8mm (.032") min
Width	1.5, 1.8, 2.0, 2,3, 2.6, 3.0, 3.5, 4.0mm

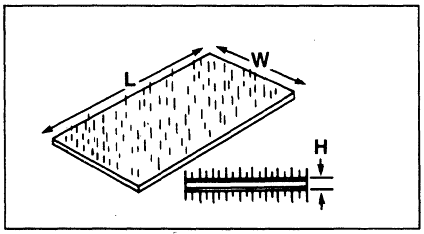


H The H-Connector consists of two rows of conductive rubber segments embedded uniformly within insulating sponge rubber. The soft sponge rubber insulation protects electrodes from damage caused by humidity and harsh environments.

The H-Connector can be ordered in lengths ideal for large flat panel displays. Connectors with four rows of conductors are also available on special order.

SPECIFICATIONS

Pitch	0.4mm (.016")
Length	250mm (9.842") max
Height	1.0mm (.394") min
Width	1.5, 1.8, 2.0, 2,3, 2.6, 3.0, 3.5, 4.0mm



AF The AF-Connector consists of thousands of conductive carbon fibers, embedded randomly throughout an insulating sheet. The fibers protrude several microns above each surface, making easy connections with high-density electrodes.

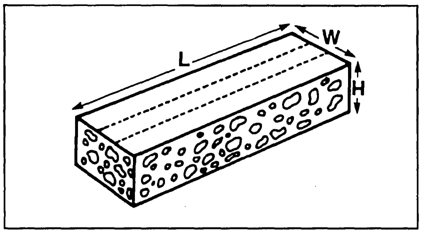
SPECIFICATIONS

Conductors per inch^2:	60,000
Thickness	0.2mm (typical), 0.3mm
Size of sheet	200 × 200mm (7.874" × 7.874") max

ELASTOMERIC CONNECTORS

Shin-Etsu Polymer

SP America, Inc.
1181 North Fourth Street, San Jose CA 95112
(408) 947-0311 TWX 910-338-2220

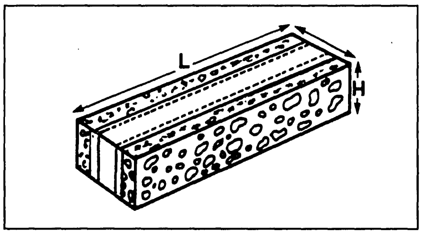


HL The HL-Connector consists of two rows of conductors composed of silver/carbon in a polymer base placed uniformly within insulating sponge rubber. The sponge insulation completely protects electrodes from harsh environments.

The HL-Connector provides low resistance connections between PCBS and PCBS, and PCBS and other devices.

SPECIFICATIONS

Pitch	0.4mm (.016″)
Length	250mm (9.842″) max
Height	1.0mm (.039″) min
Width	1.5, 2.0 2,3, 2.6, 3.0, 3.5, 4.0mm

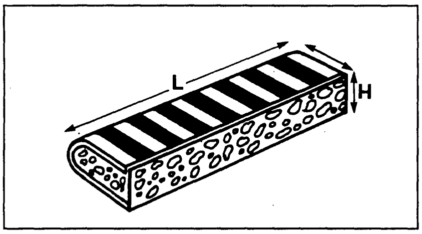


G The G-Connector consists of two rows of metal filaments embedded in solid silicone. This in turn is placed between two layers of soft sponge silicone. The sponge rubber insulation not only acts as a support, but protects electrodes from humidity and harsh environments.

This interconnector can be used for such low resistance applications as PCB to PCB, PCB to LSI, and PCB to flat panel displays.

SPECIFICATIONS

Pitch	0.2mm (.008″)
Length	250mm (9.842″) max
Height	1.5mm (.059″) min
Width	2.0 2,3, 2.6, 3.0, 3.5, 4.0, 5.0mm

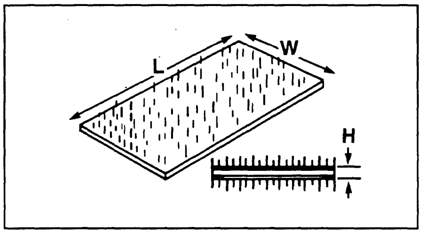


NE The NE-Connector uses gold-plated copper foil wrapped around silicone sponge rubber. It offers the low resistance of metallic foil, combined with enough flexibility to make contact with low pressure.

Designed for use as a PCB to PCB connector, the NE-Connectors are also ideally suited for connections between PCBS and LEDS, PDPS, ELS and fluorescent displays.

SPECIFICATIONS

Pitch	0.4mm (.016″), 0.2 (.008)
Length	200mm (7.874″) max
Height × Width	2.0 × 2.4, 2.3 × 2.9, 2.5 × 3.0, 3.5 × 3.0, 3.8 × 3.0, 3.0 × 3.6, 3.5 × 4.2, 3.8 × 3.5, 4.0 × 4.8mm

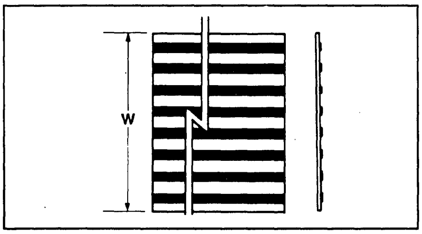


MAF The MAF-Connector consists of gold or nickel/boron-plated metal fibers, implanted perpendicularly in a silicone rubber insulating sheet. The fibers protrude several microns above each surface, connecting electrodes on both sides of the sheet.

Designed for use as a leadless LSI connector, the MAF is also ideally suited for connections between PCBS and other devices.

SPECIFICATIONS

Number of conductors per inch²:, 5,000	(0.3–0.4t)
Thickness	0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8mm
Size of sheet	50 × 200mm (2.0″ × 7.874″) max



J The J-Connectors are a series of ribbon cable connectors consisting of conductive carbon, carbon/silver, or metal traces printed on a sheet, which is then coated at its ends with a hot melt adhesive.

The adhesive assures equalized pressure of the traces to electrodes and affords high peel strength bond. The traces can also be printed in custom configurations.

SPECIFICATIONS

Pitch	Carbon trace 0.6mm (.024″) min
Pitch	Silver-Carbon trace 0.4mm (.016″) min
Pitch	Metal trace 0.4mm (.016″) min
Length	300mm (11.811″) max
Width	200mm (7.874″) max
Thickness	0.09mm (.004″)

For all sorts of interconnection tasks, Shin-Etsu has a conductive elastomer ideally suited for your application. For example, using Shin-Etsu self-supporting interconnectors (models H, SG, etc.), you can reduce assembly costs by eliminating expensive retainer frames. Shin-Etsu soft interconnectors are simply compressed between components.

Shin-Etsu also has low resistance elastomers (models HL, G, NE, etc.) for PCB-to-PCB interconnection.

Shin-Etsu elastomers shield electrodes from atmospheric moisture, contamination and corrosion.

For complete technical specifications on these and other elastomeric interconnectors, contact our sales engineers at SP America. Ask for the catalog describing our entire line of elastomeric interconnectors.

eem

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire gauge

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct current
DIAC bidirectional trigger diode
DIL dual in-line
DIN Deutsche Industrie Normenausschuss
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EMP electromagnetic pulse
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M

MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
μF microforad
MHz megahertz
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOSIGT metal-oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM nuclear instrumentation module
NOR not OR
NTC negative temperature coefficient

O

OCR optical character reader
OEM original equipment manufacturer
OR a logical operator

P

PC printed circuit
PCB printed circuit board
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLL phased lock loop
PPI plan position indicator
PROM programmable read only memory
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon controlled switch
SDA source & detector assemblies
SIDAC bidirectional voltage-triggered switch
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VME virtual machine environment
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

Z

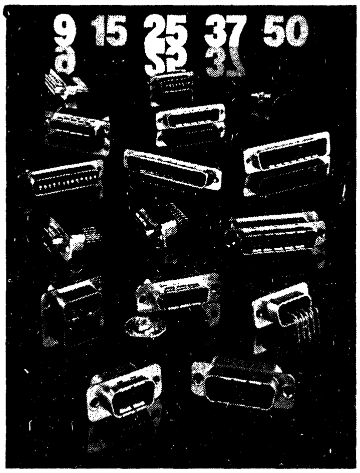
ZIF zero insertion force

SPECTRUM CONTROL INC.

IN STOCK

EMI FILTERED D SUBMINIATURE CONNECTORS

a cost effective way to comply with FCC, MIL-STD-461 A/B, VDE regulations



Spectrum's distributor stocked filtered connector product line is described in detail over the next few pages. All dimensions are shown in inches (metric equivalents in millimeters are in parentheses). Decimal tolerances, unless otherwise specified, are ±.015. All electrical engagement areas (plug and receptacle) are gold plated copper alloy. All terminations (printed circuit board right angle, solderless wire wrap and solder cup) are solderable. Shells are tinned aluminum. Insulators and right angle brackets are UL rated 94 V-0. Radio frequency ground contact from the connector shell to the mating connector is assured by a patented* coaxial spring contact on the pin side of the plug, the socket side of the receptacle and both pin and socket sides of the adaptor. EMI filter types specified are either Pi-Section (Pi) or Feed-through (FT).

*U.S. Patent 4516815

This versatile new idea fills a variety of needs. Several OEM's are using the product to avoid costly system redesign while some consumers of personal computers are using the adaptor to eliminate troublesome field 'glitches'. The adaptor also features a coaxial grounding system to insure that proper filtering is achieved.

The wrap post termination tail will accommodate #28 or #30 AWG rigid wire.

See page 4 for performance characteristics of filter types.

* Shell size 50 has three rows of terminations, shell sizes 9 through 37 have two rows of terminations as depicted.

For Panel Cutouts see page 8.

Proper mounting of any EMI filter — including the EMI filtered D Subminiature — is critical to the achievement of electromagnetic compatibility. The mounting surface for grounding the connector must be free from paint or any other insulating material. The sketches above indicate the use of one of Spectrum's EMI gaskets to fill any tolerance gaps and adjust for irregularities in the flatness of the mounting surface.

Spectrum Control fabricates a full line of gasket and shielding materials for EMI purposes, as well as environmental needs. Indicate front or rear mounting by part number described above.

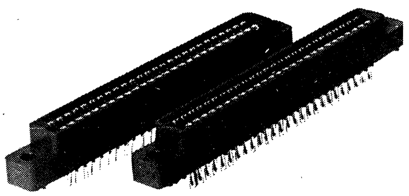
Sullins ELECTRONICS CORP. / PRINTED CIRCUIT CONNECTORS

EZ SERIES—LOW PROFILE DIP SOLDER| EYELET



FEATURES

- Insulation Resistance: 5,000 Megohms
- Solvent Resistance: Perchloroethylene Freon 113, Freon 11, Trichloroethylene
- Rated Voltage (At sea level): 600 VDC, 800 VDC, 1800 VDC, for contact centers of .100, .125, .156, respectively
- Current Rating: 3 amperes

MATERIALS

- Insulator: Glass filled thermoplastic polyester (Blue Valox*) or polyphenylene sulfide (green Ryton*)
- Contacts: Copper alloy contacts with gold over nickel plating on contact surface; tin/lead or gold over nickel on the tail

* (Trademarks: General Electric Valox, Philips 66 Ryton)

- Voltage Drop: 30 MV at rated current
- Contact Resistance: 10 milliohms maximum
- Operating Temperature: −65°C to +125°C For Standard Valox with Phosphor Bronze
- Board Insertion Force: 16 ozs maximum per contact pair using .062 steel test blade
- Board Withdrawal Force: 1 oz minimum per contact pair using .062 steel test blade
- Accommodates .062 PC board
- Bifurcated full bellows contacts

POLARIZATION KEYS

- P/N PLA-K1 for .100 centers between contact key
- P/N PLA-K1 for .125 centers between contact key
- P/N PLM-K1 for .156 centers between contact key
- P/N PLM-K2 for .156 centers in position key

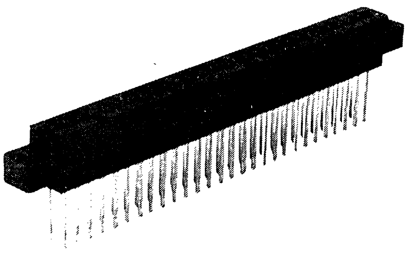
Sullins ELECTRONICS CORP. / PRINTED CIRCUIT CONNECTORS

EZ SERIES—HIGH PROFILE DIP SOLDER/WIRE WRAP*



FEATURES

- Insulation Resistance: 5,000 Megohms
- Solvent Resistance: Perchloroethylene Freon 113, Freon 11, Trichloroethylene
- Rated Voltage (At set level): 600 VDC, 800 VDC, 1800 VDC, for contact centers of .100, .125, .156, respectively
- Current Rating: 3 amperes

MATERIALS

- Insulator: Glass filled thermoplastic polyester (Blue Valox)
- Contacts: Phosphor Bronze contacts with gold or tin/lead over nickel plating

* Trademark of Gardner Denver

- Voltage Drop: 30 MV at rated current
- Contact Resistance: 10 milliohms maximum
- Operating Temperature: −65°C to +125°C
- Board Insertion Force: 16 ozs maximum per contact pair using .062 steel test blade
- Board Withdrawal Force: 1 oz minimum per contact pair using .062 steel test blade
- Accommodates .062 PC board
- Bifurcated bellows contacts

POLARIZATION KEYS

- P/N PLC-K1 (Order separately) for between contact polarization

Sullins ELECTRONICS CORP. / PRINTED CIRCUIT CONNECTORS

D-SUBMINIATURE

FEATURES

- All plastic, right angle, female receptacle.
- 9, 15, 25 and 37 positions.
- Standard footprint.
- Selective plating with 10 or 30 micro-inches of gold.
- Large cavity lead-in designed for blind mating.

GENERAL SPECIFICATIONS

MATERIALS

Insulator: Black, glass filled thermoplastic polyester Valox UL94V-0.

Contacts: Phosphor Bronze.

ELECTRICAL

Insulation Resistance: 5000 Megaohms.

Dielectric Withstanding Voltage: 1500 VAC minimum.

Current Rating: 5 Amperes.

Contact Resistance: 10 milliohms maximum at rated current.

ENVIRONMENTAL

Solvent Resistance: Perchloroethylene, Freon 113, Freon 11, Trichloroethylene.

Operating Temperature: −65°C to +125°C.

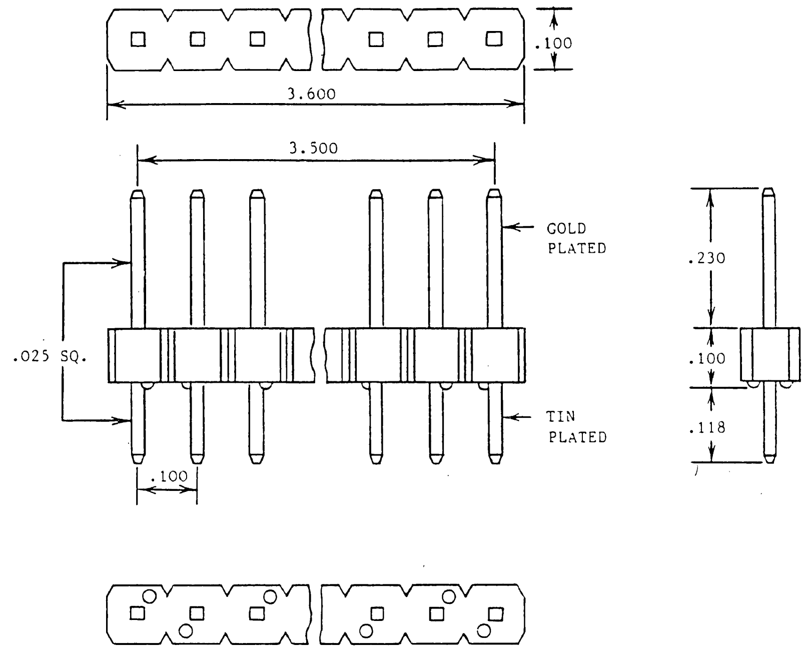
Sullins ELECTRONICS CORP. / PRINTED CIRCUIT CONNECTORS

.025 POST HEADERS UNSHROUDED, SINGLE ROW, STRAIGHT



This is Sullins newest connector available in 36 positions. Breakable strips of dual and single row contacts. These straight pin headers are available with numerous head and tail lengths, as well as several plating options. All designed to give you high reliability at low prices.

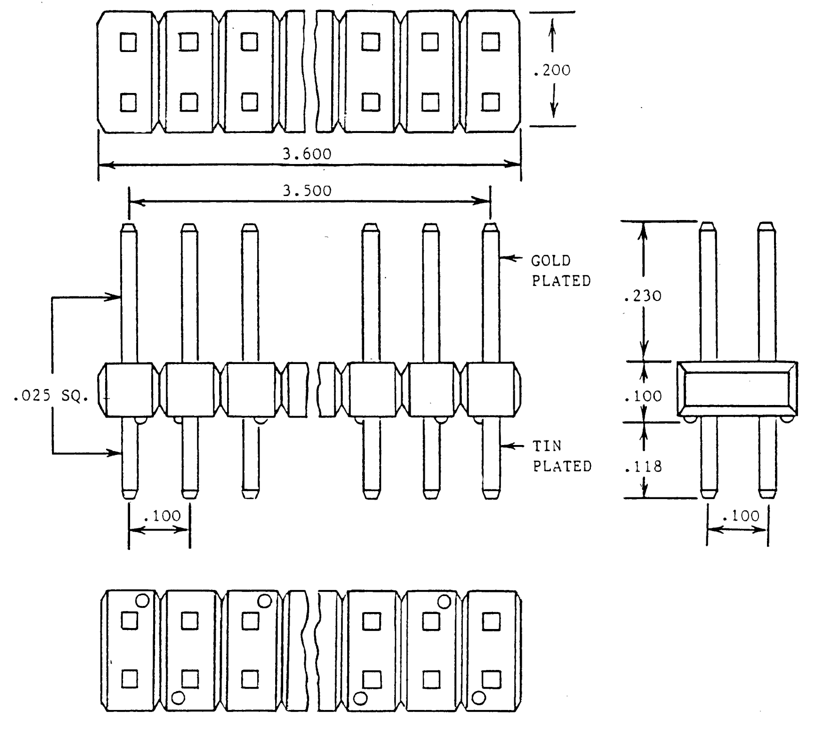
NOTES:

1.0 This specification covers the requirements for a single 36 position .025 sq. post header
2.0 Insulation Material: Black thermoplastic polyester.
3.0 Contact Material: CA510, phosphor bronze grade A
4.0 Plating: Z=.000010 gold on contact surface, .00010 tin on tail. .00050 nickel underplate. X=.000030 gold on contact surface, .00010 tin on tail. .00050 nickel underplate
5.0 Temperature To 125 degrees C. continuous
6.0 UL Flammability Rating: 94V-0
7.0 Voltage Rating: 600 VDC minimum at sea level
8.0 Current Rating: 3 amperes
9.0 Insulation Resistance: 1000 megohms (min)
10.0 Not drawn to scale

Right angle, unshrouded assemblies are available.

ORDER P/N; PZC36SAAN

.025 POST HEADERS UNSHROUDED, DUAL ROW, STRAIGHT



NOTES:

1.0 This specification covers the requirements for a dual 36/72 position .025 sq. post header
2.0 Insulator Material: Black thermoplastic polyester
3.0 Contact Material: CA510, phosphor bronze grade A
4.0 Plating: Z=.000010 gold on contact surface. .000100 tin on tail. .00050 nickel underplate X=.000030 gold on contact surface. .000100 tin on tail. .00050 nickel underplate
5.0 Temperature: To 125 degrees C. Continuous
6.0 UL Flammability Rating: 94V-0
7.0 Voltage Rating: 600 VDC minimum at sea level
8.0 Current Rating: 3 amperes
9.0 Insulation Resistance: 100 megohms (min)
10.0 Not drawn to scale

Right angle, unshrouded assemblies are available.

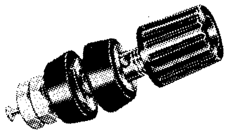
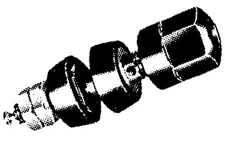
5-way® BINDING POSTS

5 WAYS TO CONNECT ● GOLD-PLATED BRASS PARTS ● RANGE OF COLORS



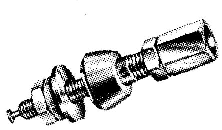
FLUTED NUT TYPES

Plastic parts of standard (not miniature) size types molded of Lexan polycarbonate resin; brass parts are gold-plated. Rated for 30 amperes, 1000 volts working.



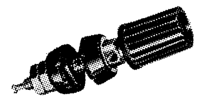
HEX NUT TYPES

Rated for 30 amperes, 1000 volts working. Brass parts gold-plated; plastic parts are of nylon compounded to meet military specifications MIL-P-20693A, Type IV.



GROUNDING TYPE

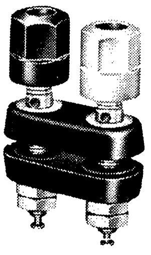
For making rapid connections to ground. Made of finely machined brass nickel-plated and polished. Panel grounding collar frozen to shaft has "D" type shoulder for locking in keyed panel hole.



MINIATURE TYPES

Fluted nut design. Rated for 15 amperes, 1000 volts working. Nylon parts meet military specification MIL-P-20693A, Type IV. Limited clearances between insulated and current-carrying parts on BP21 types minimize possibility of accidental contact.

DOUBLE ASSEMBLY TYPES

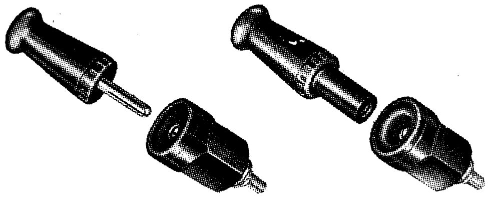


For instrument and equipment panels requiring binding posts mounted on ¾" centers. Rated for a current capacity of 30 amperes and a working voltage of 1000 volts. Brass parts are gold-plated; panel insulators in black only. Self-contained assembly makes mounting more accurate, faster and easier than two individual binding posts and gives maximum strength where connections are frequently made.

STYLE	TYPE
Fluted Nut – Standard	DF31*
Hex Nut – Standard	DF30*
Grounding – All Metal	GP30NC
Fluted Nut – Miniature	DF21*
Fluted Nut – Mini Ltd. Clear.	BP21*
DOUBLE ASSEMBLY TYPE	
Black & Red Hex Nut	DF30-2-BRC

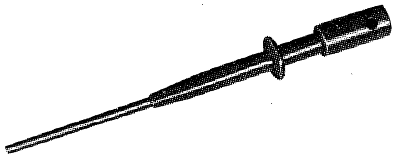
*Indicate color desired: red, white, blue, black, yellow or green.

SUPERCON®
ELECTRICAL CONNECTORS



Nylon plastic parts; gold-plated brass current-carrying parts. Wiring connections to the same plug can be either soldered or solderless. Plug cable-fastening screws permit a wide range of cable sizes. Plug grips are of a simple, two-piece threaded construction for quick assembly. All receptacle plastic parts are molded of the same color to permit more rapid and accurate circuit identification front and back of panel when installed. The 25, 50 and 100 ampere types are listed by Underwriters' Laboratories, Inc. In red, black, white, blue, green or yellow.

5-WAY™
TEST PROBES



For test connections to PC boards and other electronic components. Design allows connections by hooking onto component leads or by plugging into Superior Electric 207146-001-JB terminals or others having 0.080" diameter receptacles. For plug-in, conductor holds firmly to inside of receptacle under spring tension. When used for hook-on, probe clamps to component lead or wire wrapping pin with approximately 16 oz. force. Conductor beryllium copper tempered to spring hardness. Insulating parts durable nylon plastic capable of withstanding 250°F without deforming. Available in red, black, white, blue, green or yellow.

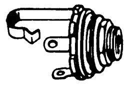
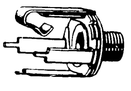
Littel-Jax PHONE JACKS

Quality phone jacks that mate with standard .25 in. (6.35 mm) or .21 in. (5.33 mm) phone plugs. Notched insulating washers mechanically interlock springs and solder lugs. "V" bend in tip spring firmly holds mating plug. Minimum space requirements. Mounts in single .375 in. (9.52 mm) hole, panels up to .156 in. (3.96 mm) thick, except L-11 and L-12A in panels up to .25 in. (6.35 mm) thick. PC-12A; std. .25 in. (6.35 mm) dia. bushing.

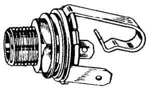
Littel-Jax PHONE JACKS with QUICK CONNECT TERMINALS. Littel-Jax jacks, Nos. FA-11 & FAL-11 with quick connect terminals accept AMP FASTON* 205 Series receptacles. Mounts in .375 in. (9.52 mm) dia. holes on 1.375 in. (34.92 mm) centers (min.) Locknut and washer supplied. *Trademark of AMP INC.



C-11



PC-12A



FA-11

TWO CONDUCTOR TYPES

Part No.	Schematic No.	Typical Mating Plug	MIL-Type	Description
11	I	250	—	Open circuit
C-11	I	440,445, 470[1]	MIL Type JJ-034, Part No. M641/6-1	With locating pin (non-turn device)
FA-11	I	250	—	AMP FASTON 205 Series. Quick connect terminals.
FAL-11	I	250	—	.375 in. (9.52 mm) lg. bushing. Quick connect terminals.
L-11	I	250	—	.375 in. (9.52 mm) lg. bushing
S-11	I	S-250	—	.210 in. (5.33 mm) I.D. bushing
12A	III	250	—	Tip shunt
C-12A	III	440, 445, 470[1]	MIL Type JJ-089, Part No. M641/12-1	—
L-12A	III	250	—	.375 in. (9.52 mm) lg. bushing
S-12A	III	S-250	—	.210 in. (5.33 mm) I.D. bushing
PC-12A	III	250	—	P.C. board mtg.
13	V	250	—	Isolated "make" circuit
13A	VI	250	—	Transfer circuit
13E	IX	250	—	Isolated "break" circuit

NOTE: [1] Mating Plugs — PJ-055B, M642/4-1; PJ-055R, M642/4-2; PJ-055M, 642/4-3.

THREE CONDUCTOR TYPES

Part No.	Schematic No.	Typical Mating Plug	MIL-Type	Description
12B	IV	267	—	Double open circuit
C-12B	IV	480 (PJ-068, M642/5-1)	MIL Type JJ-033, Part No. M641/5-1	—
L-12B	IV	267	—	.375 in. (9.52 mm) lg. bushing
S-12B	IV	480 (PJ-068, M642/5-1)	—	.21 in. (5.33 mm) I.D. bushing
13B	VII	267	—	Tip shunt
S-13B	VII	480 (PJ-068, M642/5-1)	—	.21 in. (5.33 mm) I.D. bushing
14B	XII	267	—	Double closed circuit

Hi-D Jax ENCLOSED PHONE JACKS

Series 110: Smaller, compact phone jacks mate with std. .25 in. (6.35 mm) phone plugs. Molded body protects integral silver-plated springs. Low contact resistance; low electrical leakage and low capacity between springs. Mounts on .625 in. (15.88 mm) center in single .375 in. (9.52 mm) hole in panels up to .156 in. (3.96 mm) thick, depth behind panel 1.094 in. (27.79 mm). All jacks with "M" prefix designed and adjusted to mate with telephone and MIL-std. plugs. Jacks with PC terms, mount to single, double-sided and multilayer boards up to .094 in. (2.39 mm) thick. Standoff shoulders; mounting hardware supplied.

Series RN-110: Right angle jack, saves mounting space on PC boards for commercial and telephone/MIL applications. Available in 2- and 3-cond. types with or without shunt circuits; all mate with .25 in. (6.35 mm) dia. COMMERCIAL or TELEPHONE/MIL plug finger configurations. Right angle jack permits tip of mating plug to be inserted parallel with PC board. Can be mtd. on PC boards, combined PC board and panel/chassis, or panel/chassis only. Jack bushing mounts through .375 in. (9.52 mm) dia. hole in panels or chassis up to .141 in. (3.58 mm) thick. Mtg. centers .625 in. (15.88 mm) min. Washer & locknut supplied.

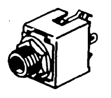
"Tini-D Jax" MINIATURE ENCLOSED PHONE JACKS



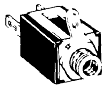
PC-142A

Small, completely enclosed 2-cond. molded phone jack. Phenolic housing protects bifurcated beryllium copper springs from bending during mounting. Mounts on .375 in. (9.52 mm) centers in .25 in. (6.35 mm) dia. hole in panels up to .125 in. (3.18 mm) thick. Depth behind panel .625 in. (15.88 mm).

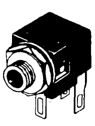
Part No.	Description	Schematic No.	Typical Mating Plug
142A	Bushing mount	III	750
PC-142A	PC board mount[1]		

NOTE: [1] Threaded bushing for conventional mounting and special spring terminals that "snap-in" PC boards up to .125 in. (3.18 mm) thick.

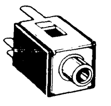
"Micro-D Jax" SUBMINIATURE ENCLOSED PHONE JACK



MDSL-2A

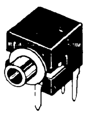


MDSL-2A-RA



MDPC-2A

"Super-small," shunted, fully enclosed jack — only .312 in. (7.92 mm) x .344 in. (8.74 mm) x .688 in. (17.48 mm). 1-piece molded body locks all internal parts in place. Mates with Switchcraft Micro-Plug phone plugs. PC terminals have standoff shoulders. Nos. MDSL-2A & MDSL-2A-RA have #10-48 threaded bushing; mounting washer & locknut supplied.

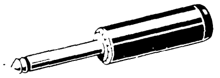


MDPC-2A-RA

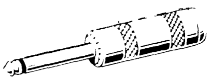
Part No.	Schematic No.	Typical Mating Plug	Cond.	Terminals	Mounting In. (mm)
MDSL-2A	III	850, 851	2	Solder lug	Mounts thru .203 (5.16) hole, in panels up to .063 (1.6) thick. Singly or in rows on .350 (8.89) min. centers. Adjacent sleeves touch when mtd. on .315 (8.00) centers.
MDPC-2A	III	850, 851	2	PC	Mounts singly or in rows on .315 (8.00) min. centers or .350 (8.89) min. centers
MDSL-2A-RA	III	850, 851	2	Solder lug	Same as Part No. MDSL-2A except right angle solder lug terms. for min. space. Behind panel clearance .382 (9.70)
MDPC-2A-RA	III	850, 851	2	PC	Same as Part No. MDPC-2A except right angle PC terms. Above PC board clearance .345 (8.76)

Littel-Plug PHONE PLUGS

Phone plugs fit std. .25 in. (6.35 mm) phone jacks. Solder terminal plugs have built-in cable clamp. Shielded metal handles are nickel-plated brass or durable molded plastic: 1.688 in. (42.88 mm) long x .5 in. (12.7 mm) dia. Max. cable dia.: 2.97 in. (7.54 mm).



No. 250



No. 280

THREE CONDUCTOR

260	Screw terminals, black handle.	12B
S-260	Screw terminals, black handle, .206 in. (5.23 mm) dia. sleeve & tip.	S-12B
267	Combination cable clamp & solder lugs, black handle.	12B
269	Same as 267 except red handle.	12B
290	Screw terminals, shielded handle.	12B
297	Same as 267 except shielded handle.	12B

TWO CONDUCTOR

Part No.	Description	Typical Mating Littel-Jax Jacks
240	Screw terminals, black handle.	11
C-240	Screw terminals with integral cord clamp, black handle.	11
245	Screw terminals, red handle.	11
C-245	Same as C-240 except red handle.	11
250	Solder lugs, black handle.	11

PHONO JACKS AND PLUGS

Low cost 2-cond. jacks and plugs for record players, FM-AM tuners, tape recorders, test equipment, etc. 3501MC has .375 in. (9.52 mm) O.D. shell and cable clamp. 3501FP for front panel mount in .25 in. (6.35 mm) hole in panels up to .125 in. (3.18 mm) thick. 3501FR for rear panel mount in .375 in. (9.52 mm) hole in panels up to .203 in. (5.16 mm) thick. 3502 has unique cable clamp with .406 in. (10.31 mm) O.D. shielded removable handle. 3503 extension jack has shielded removable handle .406 in. (10.31 mm) O.D. with cable clamp.

Series 3558 are phono plugs with cable clamp and "snap-on" color-coded plastic handles in red, black and white.

Series 3511, 4 Leaf Clover Jax, molded phono Jack with dual contact surfaces for low shunt resistance. Open and closed circuit types. Mates with all Switchcraft phono plugs.

Part No.	Description
3501F	Phono jack
3501M	Plug, less cable clamp
3501MC	Plug with cable clamp
3501FP	—
3501FR	Phono jack
3502	Plug
3503	Extension Plug

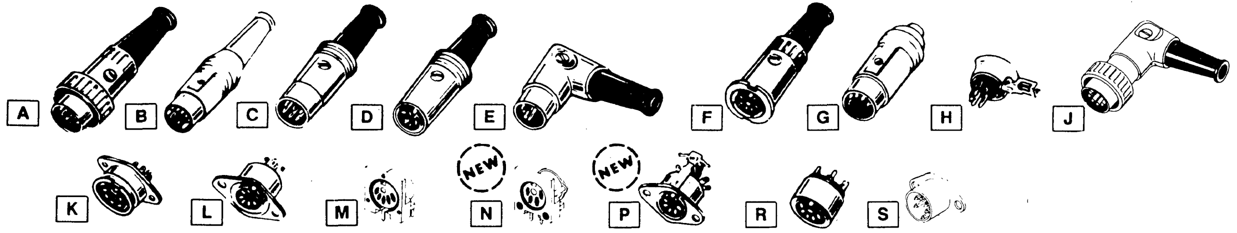
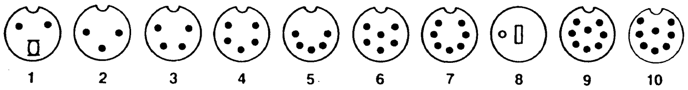
CIRCULAR DIN CONNECTORS

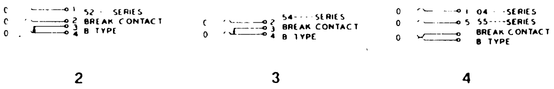
Designed for low level circuitry, for unlimited use in computer, commercial, industrial, consumer and military applications. Exact replacements for plugs and receptacles, used on most foreign built recorders, radios and dictation equipment. Also used extensively for computer keyboard, I/O and peripheral applications. "Switchcraft/DIN" 2 to 8 contact connectors include male and female plugs and receptacles with bright nickel-plated barrels & plastic snap-on shells. Lock-ring coupling, silver plated contact pins for low contact resistance, contact friction coupling for low mechanical interference noise, exclusive "automatic" grounding and polarization provisions. Full line of receptacles offer thru panel, PC board and surface mounting. Positioning "Ground Key-Rib" or "Ground Contact" — electrically integral with the connector shell — is provided in each plug and receptacle (except those with plastic housing or shells) to ground or shield the connector shell. Right angle PC board mount for common ground use also available.



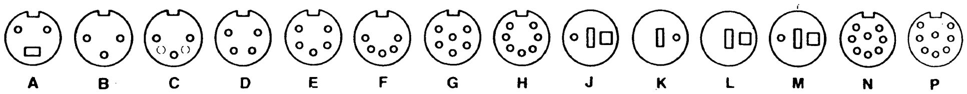
PIN ARRANGEMENTS

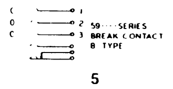


SCHEMATIC CIRCUITS



CONTACT ARRANGEMENTS



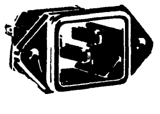


MOLDED CABLES WITH DIN PLUGS

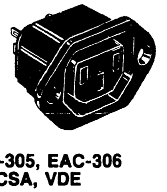
Switchcraft's versatile system of molded cable assemblies and mating receptacles meets the increased demand for modern, miniature connectors for a wide range of electrical/electronic applications. Connectors are DIN circular type and are fully field-proven in electronic applications. Strict requirements of FCC 20780 docket are fully addressed in offering fully shielded links.

The system comprises male and female plugs, locking and non-locking, with from 3 to 8 pins/contacts. Units are fully molded and protected with a rugged handle and advanced design cable relief. A complete range of mating receptacles is also available.

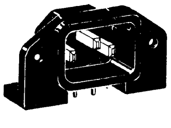
EUROPEAN AC RECEPTACLES



EAC-301, EAC-302
UL, CSA, VDE



EAC-305, EAC-306
UL, CSA, VDE
(CERTIFICATE OF COMPLIANCE; EAC-305 only)



EAC-303
UL, CSA, VDE

Receptacles mate with European power plugs. Choose from panel/chassis or PC mount types. U.L. and C.S.A. listed types. Rating 6 A, 250 V AC or 15 A, 250 V AC. No. EAC-301 is VDE approved; No. EAC-305 has VDE Certificate of Compliance.

Part No. EAC-301 — Grounding types, 3 pin male receptacle. 6 A, 250 V AC; U.L. C.S.A., VDE listed. Mates with Switchcraft power cords Nos. P-2392, P-2720, P-2721, P-2722, P-2725, P-2727, P-2728; Belden SPH-386; or equiv. Rear mounts in 1.201 in. (30.51 mm) x .875 in. (22.22 mm) hole or front mounts in 1.08 in. (27.43 mm) x .785 in. (19.94 mm) hole in chassis/panel with 2, #5 screws or .125 in. (3.18 mm) dia. rivets (not supplied). Longer grounding pin allows ground circuit to "make" before power circuit, and "break" after power circuit disconnects. Pins .045 in. (1.14 mm) x .157 in. (3.99 mm) and terminals: silver plated.

Part No. EAC-302 — Same as EAC-301, except 15 A, 250 V AC rating: U.L. & C.S.A. listed. Mates with Switchcraft power cords Nos. P-2723, P-2724; Belden SPH-386; or equiv.

Part No. EAC-303 — Grounding type 3-pin male receptacle with right-angle housing and pins for PC board mtg. Ground lug (solder type) also supplied. .136 in. (3.45 mm) dia. housing holes also permit panel/chassis mount. 6 A, 250 V AC rating: U.L. & C.S.A. listed. Same rear mount as No. EAC-301. Pin terminals silver-plated brass. Mates with same cords as Nos. EAC-301.

Part No. EAC-305 — Grounding type, 3-contact female receptacle Rated: 6 A, 250 V AC: U.L. & C.S.A. listed. Front panel/chassis mount in 1.275 in. (32.39 mm) x 1.56 in. (39.62 mm) hole with 2, #5 screws or .125 in. (3.18 mm) rivets (not supplied). Mates with Switchcraft power cords Parts Nos. P-2721, P-2725; Belden SPH-388: or equiv. Contacts/terminals: brass.

No. EAC-306 — Similar to EAC-305, except 15 A, 250 V AC rating U.L. & C.S.A. listed.

Switchcraft, Inc., 5555 N. Elston Ave., Chicago, IL 60630 Tel. (312) 792-2700 TWX 910-221-5199

Switchcraft®
A **Raytheon** Company

"Q-G" AUDIO CONNECTORS WITH COMPLETE GROUNDING PROVISIONS!

Switchcraft "Quick-Ground" connectors feature a separate "Ground-Terminal" electrically integral with connector shell. Ground continuity between mating plugs automatically accomplished through exclusive "Ground Contactors". Possible loss of insert screw is eliminated by new "Captive-Design" insert screw. Socket and pin assemblies utilize "wedge-action" to insure firm, reliable positioning in connector shell. Inserts are easily removable for wiring & soldering. High impact thermosetting plastic material insures long reliable insert assy. life. Female connectors have latch lock feature to hold connectors firmly together. Plugs and receptacle mechanically keyed for proper mating. "Q-G" (*) Series 3-, 4-, 5-, 6-, and 7-pin/contact connectors offer 4-, 5-, 6-, 7-, & 8-pin contact versatility when "Ground-Terminal" is used. Used interchangeably with Switchcraft QGP connectors (page 41): 3- and 4-contact (Amphenol 91-850 and Excellite 91-450 Series, and Cannon XLR-3, XLR-4): 5-contact (Cannon XLR-5 and Amphenol Excellite 91-450 Series).

Cord plug part no. suffix "L" indicates strain relief accepts cables from .25 in. (6.35 mm) to .328 in. (8.33 mm) dia.; other plugs accept cables up to .25 in. (6.35 mm) dia. (*) Number of insert contacts or pins must be specified to complete part number.

Part number with suffix "B" indicates cord plug with "Black-Velvet" black finish (minimizes glare and permits stable "through-connector" shielding). Suffix "D" indicates type with "FAS-DISCONNECT" detent feature. U.S. Patent 3,219,961; Canadian Patent No. 761,114 (June 13, 1967)

Specifications:

ELECTRICAL

(QG Connectors Only)

Contact Resistance: 50 milliohm max., per pole
Current Rating: 3 pole–15A; 4 pole–10 A, 5 & 6 pole–7.5 A; 7 pole–5 A.
Insulation Resistance: 1,000 megohms, min.
Dielectric Withstanding Voltage: 1,000 V (rms)
Capacitance: 2 Pf between pins and 4 Pf between pins and shell, max. (A3M & A3F).

MECHANICAL

(QG Connectors Only)

Insertion/Withdrawal Forces: 7 lb. max., 5 lb. nominal, insertion; 7 lb. max., 5 lb. nominal, withdrawal.

MATERIAL

QG Connectors

Shell: Die-cast zinc. Satin nickel finish on all shells, except a black, electrically conductive, chrome plate finish on "Black-Velvet" shells.
Insert Insulation: High-impact, molded thermo-setting plastic.
Socket Contacts: Phosphor bronze, silver plated, chromate dipped; bifurcated on 3-contact type.
Pin Contacts: Brass, silver plated, chromate dipped, Resists tarnishing, and provides excellent electrical conductivity.
Latchlock: High-strength die-cast zinc.
Latch Release: Steel, nickel plated.
Latch Detent: Formed stainless steel.
Insert Screw: Stainless steel.
Cable Relief Bushing: Neoprene.
Mounting Nut and Washer: Brass, nickel plated. (Black, electrically conductive chrome plate finish for "Black Velvet" receptacles).
Mounting Wall Plates: Cold-rolled steel, with stainless steel finish.

QGP Connectors

Shell: Die-cast zinc, non-reflective Vel-Tone finish.
Insert Insulation: High strength, reinforced thermoset plastic.
Socket Contacts: Phosphor bronze, 50 microinch gold (over 50 microinch nickel) plated.
Pin Contact: Brass, 50 microinch gold (over 50 microinch nickel) plated.
Latchlock: Die-cast zinc, non-reflective nickel finish.
Latch Release: Steel, nickel plated.
Cable Relief Bushing: Flexible gray neoprene.
Barrel: (Female connectors only) Stainless steel.
Mounting Screws: Stainless steel, passivated, non-reflective finish.
Spanner Nut: (QGP-3-28) Die-cast zinc, nickel plated.
Nut: (QGP-3-29) Brass, nickel plated.
Washer: (QGP-3-29) Steel, nickel plated.

SYMBEX

IDC INTERCONNECT SYSTEMS

The only flat cable/connector systems with molded-in quality, reliability and convenience...Cable and contacts are integrally molded into the connector body to form a one-piece interconnect system.

Ulti•Mate-D™ D-Sub Min Cable Assemblies

for RS-232, RS-449, RS-442A, RS-443A, and other EMC applications.

Symbex designed the Ulti•Mate-D series from scratch, rather than retrofit a dated connector style to comply with recent emission control requirements. The result is a series of EMC-D Assemblies tested to exceed RS-232 and RS-449 standards and FCC Docket 20780, Part 15, Subpart J specifications.

Standard Features:

- All styles available in 9, 15, 25, and 37 position sizes
- All industry standard dimensions
- Male and Female types
- Selective gold or non-gold contacts
- Cable lengths and wiring patterns to your specifications
- High Normal Force retention
- Screw/nut retention systems, optional
- 100% factory tested

Three Styles:

	SPS — Special Purpose Shielded — 60 dB rating exceeds FCC requirements	**GPS** — General Purpose Shielded — 30 dB rating meets RS-232 and RS-449 standards	**GPU** — General Purpose **Unshielded** for use in non-critical environments
Connector Specs	• Metal Shrouds and Backshells • Terminated drain wire (optional) • Terminated cable braid • Unique spring clips	• Metal Shrouds and Backshells • Terminated Drain wire • Unique spring clips	• Plastic Backshells • Metal Shrouds
Shielding	Double sided aluminum foil 85% tinned copper braid Tinned copper drain wire (optional)	Double sided aluminum foil Tinned copper drain wire (optional)	No Shielding

Cable Styles/Specs

U.L. Style	**2464**	**2448**
Capacities (pF/ft.)	27	14
Working Voltage	300V	30V
Impedance (OHMS)	50-75	90-120
Temperature Rating	80°C	60°C

Conductors — 24 AWG tinned copper
Jacket — Black, .035″ thickness

ZEBRA® CONNECTORS FOR LIQUID CRYSTAL DISPLAYS

SERIES 1000/2000—HIGH RESISTANCE CONNECTORS

Series 1000/2000 ZEBRA® Connectors (see Figure 1) have alternating parallel layers of conductive carbon-filled and non-conductive silicone rubber. They make reliable connections by being deflected between contacting surfaces. Series 1000/2000 ZEBRA® Connectors are used for connecting any LCD from small displays for watches to large area displays for instruments. Table A shows the different types of Series 1000/2000 ZEBRA® Connectors available. Table B shows performance characteristics of Series 1000/2000 ZEBRA®.

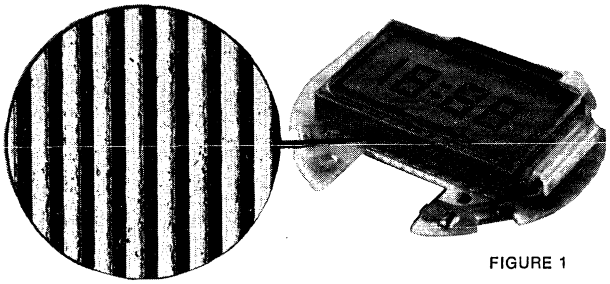

FIGURE 1

Series	LCD Contact Spacing Center-to-Center*	PITCH: Sum of the Thickness of an Adjacent Conductive and non-Conductive Layer		Conductive Layer per inch	Individual Conductive and Insulating Layer Thickness		Available Lengths

INTERCONNECTION PRODUCTS

Figure 2 shows the three dimensions of the Series 1000/2000 ZEBRA® Connector. When ordering, the three dimensions should be specified within the limits shown in Table C.

For best overall performance, Series 1000/2000 ZEBRA Connectors must be ordered and used with a ratio of H/W equal to or greater than 1.5

TABLE C

INSULATING BARRIER

Series 1000/2000 ZEBRA Connectors are available with insulating barriers on one or two sides. Properties of insulating barriers are shown in Table D.

SERIES 1000/2000 ZEBRA INSULATING BARRIER

Description	Insulating Barrier
Color (one only)	White (For colors other than white, contact factory)
Hardness, Durometer A	30
Dielectric Strength volts/mil.	500
Resistance, ohms	10^{12}
Insulating Barrier Width (B) in.*	0.002 ±0.001
(B) mm	0.050 ±0.025

* The tolerance of W_1 will be equal to the sum of the tolerances of W (see Figure 3)
TABLE D

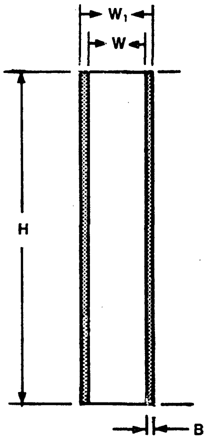

FIGURE 3

TECKNIT® a TWP company

INTERCONNECTION PRODUCTS

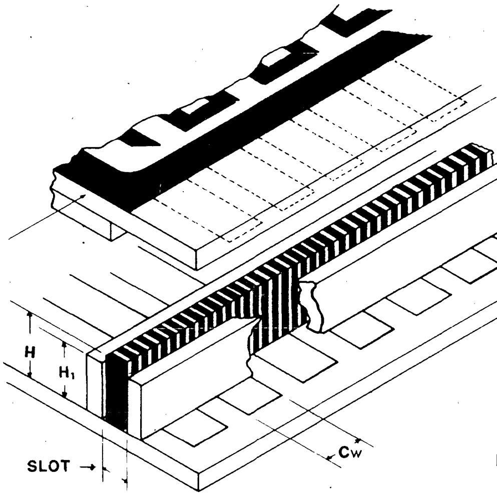

FIGURE 4

NOMINAL RESISTANCE CALCULATION

To calculate the resistance of the Series 1000/2000 ZEBRA® Connector use the following formula:

$$R = \frac{12 \times H}{C_W \times W} = \text{ohms}$$

Where: C_W = Contact pad width in inches
H = ZEBRA height in inches
W = ZEBRA width in inches

FORCE DEFLECTION

Series 1000/2000 ZEBRA® Connectors should be deflected 5% to 25% of H. To caluculate F - Force for deflection, use the following formula:

$F = 8\ DWL = \text{lbs.}$ (Metric $F = 0.56\ DWL = \text{kgs}$)

Where: $D = \frac{H - H_1}{H} \times 100\%$ (Deflection in percent)
H = Height of ZEBRA Connector in inches/cm
H_1 = Deflected height of ZEBRA Connector in inches/cm
L = Length of ZEBRA in inches/cm
W = Width of ZEBRA in inches/cm

Example:
For typical digital watch LCD, the ZEBRA Connector would have the following configurations:

$H = 0.060''/0.152\text{cm}$
$W = 0.030/0.0762\text{cm}$
$L = 0.550''/1.397\text{cm}$
For $D = 10\%$
$F = 9DWL$
$F = 9(10)\ (0.030)\ (0.550) = 1.49$ lbs.
Also $F = 0.63 \times 10 \times 0.0782 \times 1.397 = 0.67$ kgs

METRIC:

$R = \frac{30 \times h}{C_W \times W}$ where H, C_W and W are in cm

For $C_W = 0.035''/0.089\text{cm}$

$$R = \frac{30 \times 0.152}{0.089 \times 0.0762} = 672 \text{ ohms}$$

ZEBRA® CONNECTORS FOR DOT MATRIX LCD

Many LCD dot matrix displays have contact pads on the underside of the front plane facing the PC board and on top of the back plane facing away from the PC board. Connection to the front plane is made by sandwiching the self-supporting ZEBRA® Connector between the display and PC board. The ZEBRA STEP is used to connect the leads on the back plane, at level 1, with the PC board, at level 2, See Figure 14.

Dot matrix LCD's have been used successfully in electronic instruments and electronic toys and games. (For design information consult TECKNIT® Design Guide DG01-0001.)

ZEBRA STEP CONFIGURATION

The ZEBRA STEP is made from a Series 1006 ZEBRA Connector, consisting of alternating parallel layers of conductive and non-conductive silicone rubber. It is formed into a step configuration and backed with an insulating pad of silicone rubber. See Figures 6 and 7.

The ZEBRA STEP connector is available in standard size to accommodate a 2″/50.8mm x 2″/50.8mm dot matrix LCD. It is used with center-to-center contact pad spacing of 0.030″/0.762mm. For non-standard sizes, which are also available, please contact the TECKNIT Sales Department.

SELF-SUPPORTING CONNECTOR

The Self-supporting ZEBRA® Connector is a standard 1006 ZEBRA connector element supported by a soft, non-conductive silicone rubber on one or two sides. The silicone rubber creates a larger width that eliminates need for a holder, and yet the force required for deflection is very low. Only 1.0 to 2.0 lbs. force per linear inch is required for proper contact. The standard Self-Supporting ZEBRA Connector has 0.020″/0.508mm wide ZEBRA Connector element and is available in three different widths to accommodate LCD's with glass lip overhang of 0.600″/1.52mm minimum.

It is used to connect LCD's to printed circuit boards and eliminates bowing of the printed circuit board due to the low force required to make contact.

INTERCONNECTION PRODUCTS

LCD CONNECTOR ASSEMBLIES

DESCRIPTION

TECKNIT® LCD Connector Assemblies with clear bezels provide an attractive and reliable way of mounting LCD's onto a PC Board. Electrical connection between LCD and PC Board contact surfaces is made by a Series 1006 ZEBRA® Connector which consists of alternating parallel layers of conductive and non-conductive silicone rubber. Because the LCD is mounted on rubber components, the assembly provides shock and vibration protection for the display. The clear bezel provides an extra measure of protection for the LCD.

ASSEMBLY

The Connector assembly consists of a holder/retainer, two ZEBRA® Connectors, viewing area mask, and a bezel. Assembly is simple: place the holder/retainer on the PC board using the locating studs for alignment, insert the ZEBRA Connectors, LCD, and secure the bezel with two screws. The LCD Connectors are available in two configurations: one for Dual Inline displays where the viewing area is in the center, and one for Single Inline displays where the viewing area is offset toward the top. The same bezel is used for both formats; however, the masks and holder/retainer are selected to match the LCD.

The operating temperature range for the Connector assembly exceeds that for the LCD; the ZEBRA® Connectors provide a gas-tight seal of the contact surfaces to assure reliable operation in hostile environments. The bezel protects the LCD polarizer from scratches and may be used directly in the window provided in the instrument or clock case.

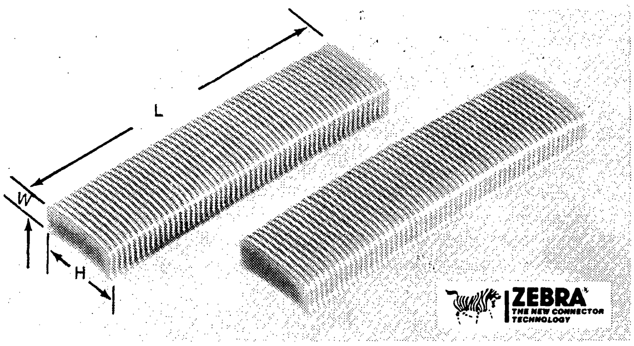
SERIES 7000/8000 — LOW RESISTANCE CONNECTORS

DESCRIPTION

The ZEBRA Series 7000/8000 elastomeric connector elements are "D"-shaped, low durometer silicone elastomer core around which flat metallic conductors are vulcanized in a row parallel to each other. The tips of the metallic conductors are turned upward so that point contact can be effected; in addition, contact is made to the flat area when the connector element is positioned between two printed circuit boards. The point contact will penetrate surface oxides or contaminants which might be present on the surface of the contact pads, thus assuring reliable electrical connection on two planes. Also available are standard board to board assemblies which include connector and holder.



SERIES 7000 DIMENSIONAL SPECIFICATIONS

CONNECTOR DIMENSIONS*	MINIMUM		MAXIMUM	
Height "H"	0.100″ ±0.005″	2.54mm ±.127mm	0.500″ ±0.015″	12.70mm ±.381mm
Width "W"	0.060″ ±0.005″	1.52mm ±.127mm	0.125″ ±0.010″	3.18mm ±.254mm
Length "L"	0.100″ ±0.005″	2.54mm ±.127mm	2.00″ ±0.015″	50.8mm ±.381mm

Note: For good design practice and low deflection force requirements, the height "H" should be twice the width "W".

SERIES 7000 MATERIALS

Conductive Elements	Tin-plated copper alloy wire.
Wire Size and Spacing	0.002″ ×0.005″ flat wire on 0.015″ center-to-center spacing. (Min. 66 wires/inch.)
Connector Body	Nonconductive blue color silicone rubber. UL-94-HB rating, 500 volts/mil dielectric strength, 35 ±5 Shore A durometer.

SERIES 8000 DIMENSIONAL SPECIFICATIONS

CONNECTOR DIMENSIONS*	MINIMUM		MAXIMUM	
Height "H"	0.150″ ±0.005″	3.81mm ±.127mm	0.500″ ±0.015″	12.70mm ±.381mm
Width "W"	0.060″ ±0.005″	1.52mm ±.127mm	0.125″ ±0.010″	3.18mm ±.254mm
Length "L"	0.100″ ±0.005″	2.54mm ±.127mm	4.00″ ±0.015″*	101.6mm ±.381mm

Note: For good design practice and low deflection force requirements, the height "H" should be twice the width "W". *(Over 4″ contact factory)

SERIES 8000 MATERIALS

Conductive Elements	Gold plated copper wire, gold 0.00001″, nickel 0.00005″. (Other wires available.)
Wire Size and Spacing	A. 0.002″ x 0.005″ flat wire on 0.010″ center-to-center spacing. (Min. 100 wires/in.) B. 0.002″ x 0.004″ flat wire on 0.0075″ center-to-center spacing. (Min. 133 wires/in.)
Connector Body	Nonconductive tan color silicone rubber. UL-94-HB rating, 500 volts/mil. dielectric strength
Film	0.001″ thick polyamide dielectric strength of film ASTM-D-149, 2000 volts/mil.

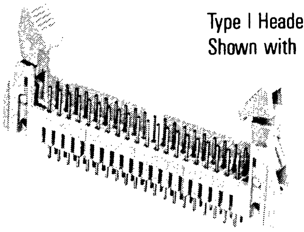
PERFORMANCE CHARACTERISTICS

Parameter	Conditions and Performance
Contacts Resistance	Less than 25 milliohms on 0.025″ wide contact pads; 0.100 amperes DC, Kelvin-type four-probe test method.
Insulation Resistance	Minimum 10^{12} ohms between adjacent conductive elements.
Current Carrying Capacity	Maximum 500 milliamperes per contacting wire.
Capacitance	Maximum 0.100 picofarads per adjacent pad at 1 MHz and 0.100″ high ("H").
Inductance	Maximum 7 nanohenries per adjacent pad at 1 MHz and 0.100″ high ("H").
Repeated Actuations	300 actuations without appreciable change in contact resistance (deflection of 15%).
Deflection	8% to 20%. Recommended deflection 10 to 15% of original height.
Deflection Force/Inch	4 lbs. per linear inch for 15% deflection for a 0.062″ ("W") × 0.285 ("H") connector.
Operating Temperature Range	−20°C min., 125°C max.
Salt Spray Test	MIL-STD-202E, method 101D, condition B. 5% salt solution 95°F, 48 hours. There was no evidence of blistering or peeling of the contact material.
Temperature Cycling	MIL-STD-202E, method 102A, condition D, −55°C, 25°C, 125°C. There was no change in the physical properties of the specimens.
Humidity (Steady State)	MIL-STD-202E, method 103B, condition C modified. 95% RH room temperature. There was no appreciable change in contact resistance after 500 hours exposure.
Corrosive Environment	1,000 hours exposure at 1 ppm H_2S and 1 ppm SO_2, 60°C and 75% RH. Slight change in contact resistance; no evidence of contact peeling or blistering.

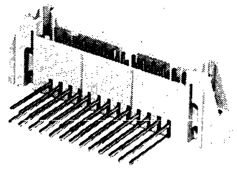
TECKNIT 135 BRYANT AVENUE / CRANFORD, NJ 07016 / (201) 272-3850

TRW Flat Cable Connectors

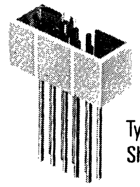
Header Assemblies



Type I Header.
Shown with Latches



Type II Header.
Shown With
Right Angle Tails



Type III Header—Low Profile.
Shown With Wire Wrap Tails

Headers, available in nine sizes, mechanically and electrically interconnect the sockets to printed circuit boards. Mating is positive and audible.

Pin headers are available in straight or right angle configurations, three or four wall units, with or without ejector latches, and in a low profile version.

TRW Flat Cable Headers are intermateable and intermountable with other competitive systems. 9 sizes: 10, 14, 16, 20, 26, 34, 40, 50 and 60.

Electrical

Current Rating: 1 Amp per contact

Withstanding Voltage: 500 V rms (@sea level)

Insulation Resistance: >1 x 10^9 Ohms

Environmental

Temperature Rating:–55°C to +150°C

Mechanical

Durability: 500 mating cycles

Color: Standard grey

Plating: Gold over nickel in contact area with gold flash or tin on tails

Contact Material: Copper alloy

Insulation Material: Glass filled polyester, UL 94V-0 rated

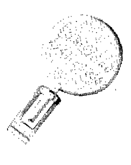
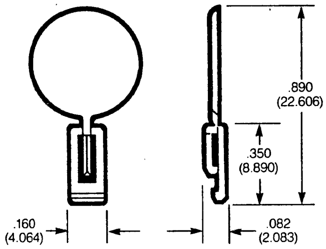
Polarizing Key

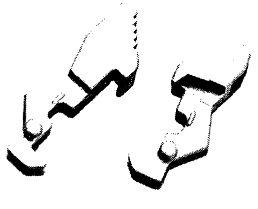


The polarizing key permits fast, fool-proof keying of header and socket. It assures proper alignment of headers to prevent equipment damage and pin or signal loss.

Dist. Part No. FCPK-886

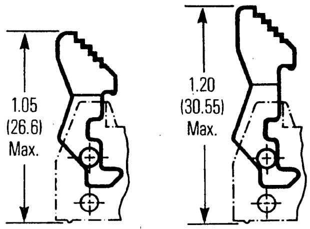


Ejector Latches



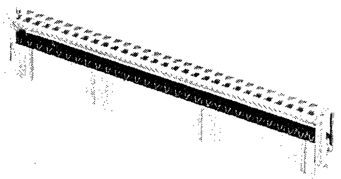
For use with Type I and Type II only.

Type	Dist. Part No.
Long Ejector Latch	LL-885
Short Ejector Latch	SL-884



TRW Flat Cable Connectors

Socket Connector Assembly



Socket Connectors control wire strain by the unique, one-piece cover/strain relief design. An exceptional feature is test probe access holes, which permit contact testing without interfering with connector function. The cover/strain relief is pre-assembled as an integral part of the connector assembly.

The two contact styles available are a double beam and a low cost single beam style. A 64-contact DIN style socket is also available. Intermates with competitive strain relief systems with addition of TRW "Cover Add-On"

9 sizes: 10, 14, 16, 20, 26, 34, 40, 50 and 60

Electrical

Current Rating: 1 Amp per contact

Withstanding Voltage: 500 V rms (@sea level)

Insulation Resistance: >1 x 10^9 Ohms at 500 VDC

Environmental

Temperature Rating: –55°C to +105°C

Mechanical

Insulation Material: Glass filled polyester, UL 94V-0 rated

Contact Material: Copper alloy

Contact Plating: Gold over nickel in contact area with gold flash or tin on tails and all tin for commercial applications.

Contact Configuration: —double beam
—single beam

Wire Accommodation: 28 AWG stranded, Color: Standard grey

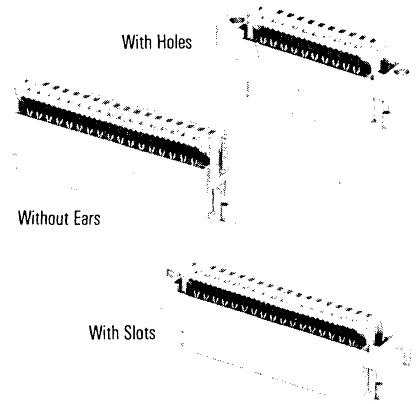
TRW Flat Cable Connectors

Edge Connector Assembly



Edge Connectors in this system are available in eight sizes. The narrow width allows a closer spacing than standard, for increasing daughter board density. They are available with or without mounting ears, in compact or standard mounting dimensions. For use in competitive mounting center applications, the slot version may be required.

8 sizes: 10, 16, 20, 26, 34, 40, 50 and 60. Termination caps are required to prevent contacts from pushing out during cable termination.

Electrical

Current Rating: 1 Amp per contact

Withstanding Voltage: 500 V rms (@sea level)

Insulation Resistance: >1 x 10^9 Ohms at 500 VDC

Environmental

Temperature Rating: –55°C to +105°C

Mechanical

Insulation Material: Polyphenylene oxide, UL 94V-0 rated

Contact Material: Copper alloy

Contact Plating: Gold over nickel in contact area with gold flash or tin on tails

Contact Spacing: Mating .100″ centers, IDC .050″ centers

Wire Accommodation: 28 AWG stranded, Color: Standard grey

TRW Flat Cable Connectors

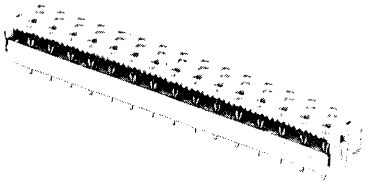
Printed Circuit Board Connector (PCB)



PCB Connectors are available in nine sizes 10, 14, 16, 20, 26, 34, 40, 50 and 60. These may be permanently soldered to the circuit board.

Electrical

Current Rating: 1 Amp per contact

Withstanding Voltage: 500 V rms (@sea level)

Insulation Resistance: >1 x 10^9 Ohms at 500 VDC

Environmental

Temperature Rating: −55°C to +150°C

Mechanical

Insulation Material: Polyphenylene oxide (PPO), UL 94V-0 rated

Contact Material: Copper alloy

Contact Plating: Gold over nickel in contact area with gold flash or tin on tails

Termination: Soldered to PC board

Color: Standard grey

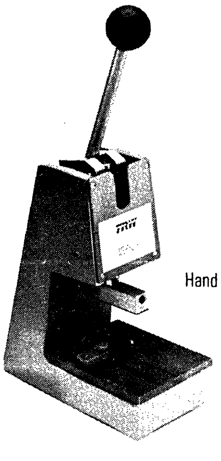
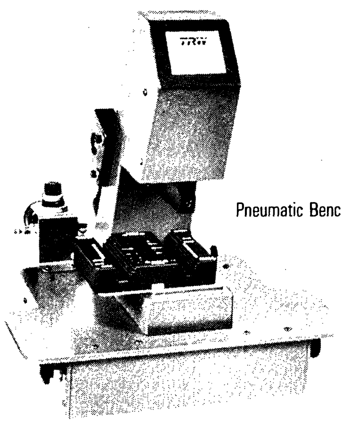
Tools

The rugged, easy to use TRW Cinch hand operated or pneumatic bench presses are designed for large volume installation of insulation displacing connectors to round conductor cables on .050" centers.

A complete series of interchangeable base plates is available to terminate the entire range of TRW flat cable connectors.



Hand Operated Tool



Pneumatic Bench Press

Description	Dist. Part No.
Pneumatic Bench Press	FC-AIR-257
Hand Operated Bench Press	FC-BP-242

TRW SUPER D* Connector System

Exclusive new plastic D-Subminiature connector. Available in 9, 15, 25 and 37 contact sizes. Connectors available with plain mounting holes, with threaded bushings, with latch blocks, and with latch blocks and threaded bushings.

Connectors are captivated in two-piece, snap-on grey hoods. Hoods are available with latches or with filler ends.

Contact material: Copper base alloy.
Contact plating: Gold on contact mating area and gold on contact terminating area, with copper underplate.
Termination: Insulation displacement with one of three TRW Cinch terminating tools. Stranded wire 24-26 AWG with .045″ diameter max. PVC insulation is displaced and wire is driven into termination to form four positive contacts on each conductor. See tooling section.
Metal stay band/strain relief: .036″ (9.14mm) steel.
Polarization: D or keystone shape insures one way mating.
Hoods: Molded phenylene oxide.
Wire strain relief: One required for 9 contact size. Two required for other sizes.
Withstanding voltage rating: 1000 volts RMS AC—sea level. 1400 volts DC.
Current rating: 3 AMPS.
EIA standards: Surpasses EIA STD. RS449 for 9 and 37 contacts interface for DTE and DCE equipment. Also meets RS232 for 25 contact size.
MIL-C-24308: Super D is designed to meet applicable performance requirements of MIL-C-24308.

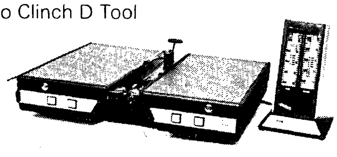
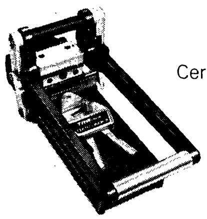
Super D and Super D Metal Shell Terminating Equipment

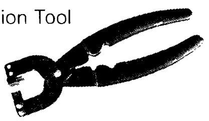
Auto Clinch D Tool





Certi Clinch D Tool

Uni Clinch Hand Insertion Tool



Super D Manual Tool

Auto Clinch D Semi-Automatic Termination Tool
Auto Clinch D is a semi-automatic, pneumatically powered and electrically controlled termination machine that can terminate Cinch Super D 25 contact connectors in less than one minute. It employs selective programmer and a common nest for all four sizes and can be equipped to terminate all-plastic connectors. Can be optionally equipped with remote visual color code display for training operators or for reading special wire sequences. It has provision for omission of wires.
Part No. 999-599-11-11-432

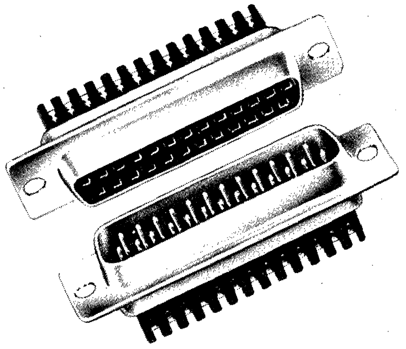
Certi Clinch D Field Termination Tool
***For 24-26 AWG Wire**
Certi Clinch D is designed for mass termination of individual wires, eliminating wire stripping, soldering and crimping. It handles all four connector sizes, is readily portable and requires no set-up time and little operator time. Rugged, all metal construction affords trouble-free long life.
*For 22 AWG consult factory.
Part No. SD-CC for Super D Plastic Connectors
Part No. SD-CCWN for Super D Metal Shell Connectors

Conversion Nest for SD-CC
Part No. SD-CCN (Converts SD-CC to SD-CCWN)

Uni Clinch D Single Wire Hand Insertion Tool
Designed to insert one 22-26 AWG wire at a time, Uni Clinch D is used as a field repair tool by field service engineers.
Part No. SD-UC.

Super D Manual Stay Band Tool
Designed for applying the steel stay band/strain relief to the cable before termination of wires to the connector, the manual Stay Band tool applies both Stay Band sizes to the full range of cable sizes.
Part No. SD-MSBT

TRW SUPER D Metal Shell Connectors



D-Subminiature connectors in 9, 15, 25 and 37 contact sizes in standard D-sub. metal shell or with bright tin finish on shell. Termination is insulation displacement for cost saving. Connector uses same black hoods, add-on latching blocks, hood and mounting screws as in the SUPER D adaptor system. It may be used for grounding in applications using shielded cable.

Notched shell versions are available making SUPER D metal shell connectors compatible with other manufacturers' plastic hoods.

Insulator: Molded glass filled polyester UL 94V-O.
Contact material: Copper base alloy.
Contact plating: Gold on contact mating area and gold on contact terminating area, with copper underplate.
Termination: Insulation displacement with same tools as the Super D Connector system except an additional nest is required. Stranded wire 24-26 AWG with .045″ diameter max. PVC insulation is displaced and wire is driven into termination to form four positive contacts on each conductor.
Withstanding voltage rating: 1000 volts RMS AC—sea level
1400 volts DC
Current rating: 3 AMPS

TRW D-Subminiature Connectors

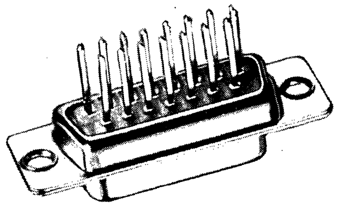
BASIC D* And BASIC D II



The economical BASIC D Connectors are ideal for commercial applications. BASIC D Connectors have a two-piece insulator with non-removable machined contacts. They are available in standard shell or bright tin finish with or without indentations.

A flat cable D-Subminiature connector is also available. See page 11.

Insulator Material: Two-piece nylon

Contact Material: Copper alloy (machined)

Contact Plating: Gold over nickel

Contact Termination: Non-removable; a) Solder pot b) .025" (.64mm) sq x .375" (9.53mm) two-level wire wrap c) .040" (1.02mm) dia. PC tails for 1/16" (1.59mm) boards

Voltage Rating: 1250 Volts AC rms (@sea level)

Current Rating: 5 Amps

Operating Temperature: –65°F to +250°F

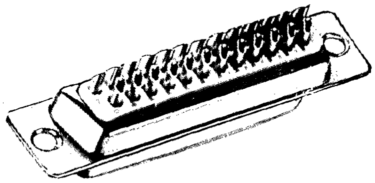
TRW D-Subminiature Connectors

BASIC D Dataphone, SERIES 1*
SERIES 1 Combination Layout



A high reliability connector with two piece insulator and non-removable contacts, designed specifically for use on data signal carrying devices. Order separately.

Insulator Material: Two-piece diallyl phthalate per MIL-M-14 Type GD1-30

Contact Material: Copper alloy

Contact Plating: Gold over copper

Contact Termination: Non-removable solder pot

Voltage Rating: 1250 Volts AC rms (@sea level)

Current Rating: 5 Amps

Operating Temperature: −65°F to +275°F

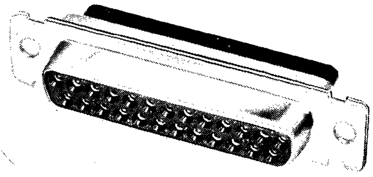
TRW D-Subminiature Connectors

SERIES 3*

TRW



Series 3 Connectors are high-reliability connectors with improved heat resistance. They incorporate a monoblock insulator. The best feature of Series 3 Connectors are the crimp, snap-in, rear-release contacts. They are ideal for field repair and replacement. Contacts can be inserted by hand and are removable with an extraction tool. Distributor Part No. CET-20-11

Insulator Material: Monoblock glass fiber-filled diallyl phthalate per MIL-M-14, Type GDI-30-F

Contact Material: Copper alloy

Contact Plating: Gold over nickel

Contact Termination: Crimp insert by hand, remove with extraction tool

Voltage Rating: 1000 Volts AC rms (@sea level)

Current Rating: 5 Amps

Operating Temperature: −65°F to +300°F

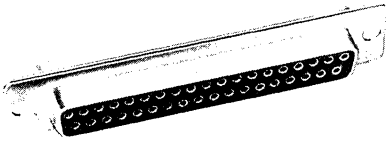
TRW D-Subminiature Connectors

SERIES 1 & SERIES 3
Military To MIL-C-24308



Series 1 Military Connectors have all of the features of Series 1 Connectors and also meet all applicable requirements of MIL-C-24308. They are available with solder pot or non-removable straight and right angle PC tails.

Insulator Material: Monoblock glass fiber-filled diallyl phthalate per MIL-M-14, Type SDG-F

Contact Material: Copper alloy

Contact Plating: Gold over copper

Contact Termination: Solder pot, straight and right angle PC

Voltage Rating: 1250 Volts AC rms (@ sea level)

Current Rating: 5 Amps

Operating Temperature: −65°F to +300°F

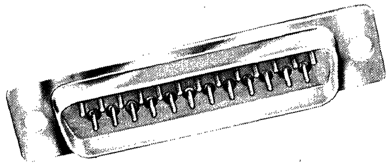
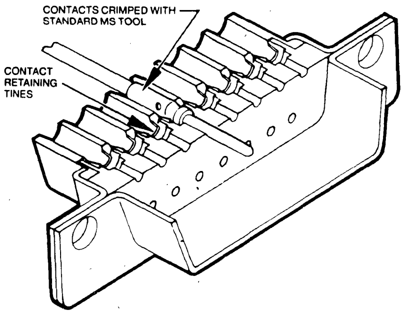
TRW D-Subminiature Connectors

ECONO D*





ECONO D Connectors have a two-piece insulator as well as crimp, snap-in rear-release contacts that can be inserted by hand in rear of insulator, and can be removed with an extraction tool. These economical connectors are ideal for commercial applications where field replacement of contacts is required at lower cost than high-reliability connectors.

The D*U version is UL recognized.

Insulator Material: Two-piece thermoplastic polyester UL-94 VO rated

Contact Material: Machined: copper alloy
Stamped: Cadmium copper

Contact Plating: Gold over nickel

Contact Termination: Crimp insert and remove with an extraction tool Non-removable; a) Right Angle and straight PC tails with .024" (.61mm) dia. for up to 3/32" (2.38mm) boards.

Voltage Rating: 1000 Volts AC rms (@sea level)

Current Rating: 5 Amps

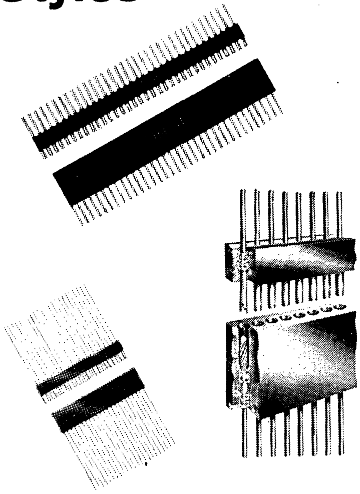
SP-87	Indicator Bulbs
SP-88	Cycle Counter
SP-89	Front Guard

TRW DURA-CON*
Connectors

Specify from six standard TRW DURA-CON Connector Styles

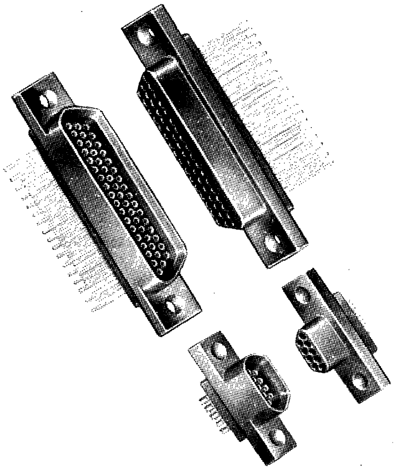


TRW DURA-CON Strip Connectors

. . . offer application flexibility for high density contacts in minimum profile package.

- Many configurations and combinations of wire terminations possible.
- 22 gauge thru 34 gauge wire combinations.
- .025″, .050″, .075″ or .100″ centers.
- Up to 60 contact positions.
- Can be assembled to PC boards or card mounting frames.
- Glass filled thermoplastic insulators.
- Available for right angle PC applications (Consult Factory).

See pages 6-7, TRW DURA-CON Connectors Catalog No. C-50 for complete specifications.

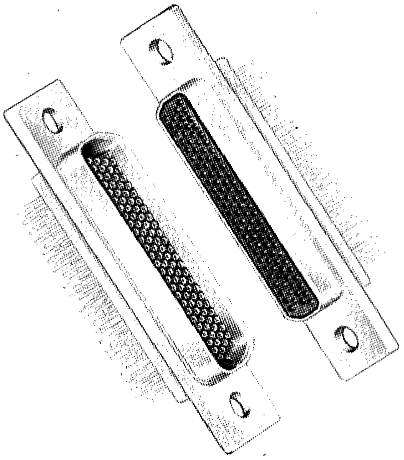


TRW Plastic Shell D-Microminiature Connectors

. . . for general use applications where weight reduction is important.

- Tough polyester thermoplastic shells, UL94 V-O.
- High performance.
- Lightweight space savers for miniaturized electronics.
- Corrosion resistant.
- 7 arrangements: 9, 15, 21, 25, 31, 37, 51 in 24 GA. size contacts.
- Current Rating: 3 amps max.
- Meets MIL-C-83513 requirements.
- Provides shorter signal paths in EDP equipment.

For all the facts about TRW Plastic Shell DURA-CON Micro-Miniature Connectors, See pages 8-11, TRW Catalog No. C-50.



TRW Metal Shell D Microminiature Environmental Connectors

. . . designed to meet stringent requirements in aircraft, data processing equipment, spacecraft and other critical applications.

- Lightweight; high contact density.
- Rugged, reliable contacts.
- Shock and vibration resistant.
- Rugged aluminum alloy shell.
- 8 sizes: 9, 15, 21, 25, 31, 37, 51, 100 contacts.
- 24 size contacts on .050″ center.
- Special power arrangements/custom terminations available.
- Provides EMI/RFI shielding.
- Meets MIL-C-83513 requirements.

Complete Metal-Shell DURA-CON D-Subminiature Connector Specifications are in TRW Catalog C-50, pages 12-15.

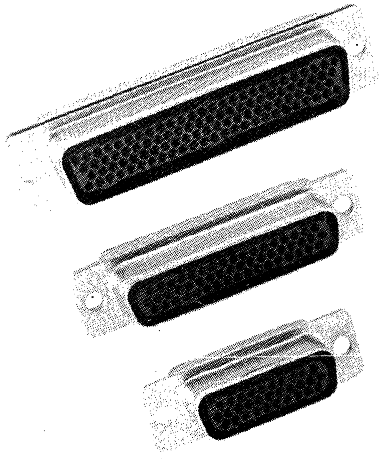
* Trademark TRW Inc.

TRW DURA-CON
Connectors

TRW

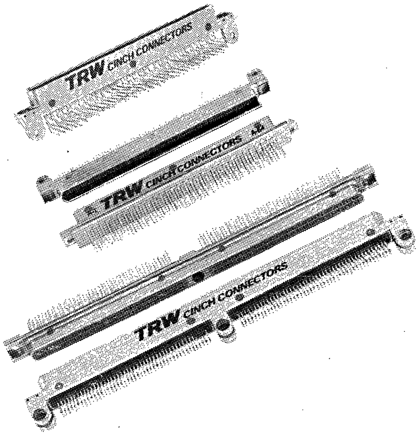


TRW DURA-CON Double-D Subminiature Connectors

. . . provides twice the number of contacts in a D-Subminiature shell for computer, aircraft, instrumentation, calculators, electronic audio equipment.

- Lightweight.
- High contact density.
- Rugged, reliable contacts.
- 22 gauge snap-in contacts permit customer assembly and easy contact replacement.
- Shock and vibration resistant steel shells; "D" (keystone) shape assures polarization.
- 5 sizes: 19, 31, 52, 79, 100 contacts.
- Current Rating: 5 amps max.
- Can be modified to meet your specific requirements or applications.

See pages 16-20, TRW Catalog No. C-50, for complete Double-D Connector performance characteristics.



TRW 128 and 184 Contact Microedge Metal Shell Connectors

. . . rugged, reliable high density connectors with 128 or 184 Twist-Pin contacts.

- High reliability.
- Space/weight savers for aircraft, space, computer, controls applications.
- High contact density.
- Aluminum shell.
- Shock and vibration resistant.
- 2 sizes: 128 and 184 contacts.
- Meets MIL-C-55302 requirements.
- 90° variations available for multi-layer boards.
- Current Rating: 3 amps max.
- Can be modified to meet your specific requirements or applications.

TRW Microedge Metal Shell Connectors are fully described in TRW Catalog No. C-50, pages 21-24.

TRW Terminal Block DURA-CON Connectors

. . . PC series connectors for use with flat cable, flex circuitry, printed circuit and multi-layer boards.

- 3 styles: straight termination, 90° termination, 90° narrow profile.
- Standard aluminum shell.
- Uniquely offers ease of soldering and mounting with all hardware or standard metal shell series.
- 8 sizes: 9, 15, 21, 25, 31, 37, 51, 100 contacts.
- Can be modified to your specific requirements or applications.
- Current Rating: 3 amps max.

Check TRW Catalog No. C-50, pages 25-28, for PC Terminal Block Connector Specifications.

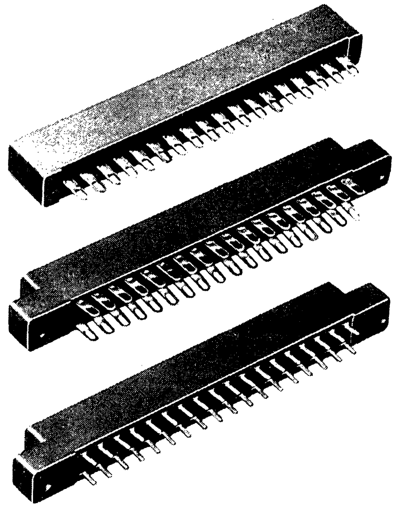
TRW CARDCON* Edge Connectors

.156" (3.96mm) Density for .062" (1.59mm) Boards



New cost effective methods of manufacture, selective plating and assembly permits TRW Cinch to price Cardcon 20% to 50% below most other P.C. Board connectors. Cardcon meets applicable performance requirements of MIL-C-21097.

Insulator: Blue glass-filled polyester—94V-O
Contact style: Semi-bellows—bifurcated
Contact material: Spring brass alloy 260
Contact plating: Gold on contact area and gold flash on tail with copper underplate.
Termination: Solder eyelet terminals; DIP solder terminals with either .200"(5.08 mm) or .140" (3.56 mm) between row spacing
Mounting: Available with mounting ears and .128" holes or without mounting ears. For other type mounting consult factory.
Test voltage: 1800 RMS AC at sea level
Rated current: 5 AMPS.
Polarizing key: Between-contact type (P/N 50-PK-2) or In-contact type (P/N 50-PK-4):Order separately.
Card guide: Part No. 50-GP-1B. Order separately.
Part is blue to match Cardcon.

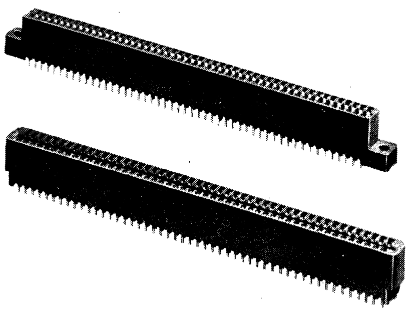
†The TRW board retention feature holds the connector firmly on the board during the wave soldering process, eliminating the need for mounting flanges and hardware. Plated-thru holes are not damaged if the connector is removed.

CONNECTOR DIVISION, TRW ELECTRONIC COMPONENTS GROUP, 1501 MORSE AVENUE, ELK GROVE VILLAGE, IL 60007-5782 • (312) 981-6000

TRW CARDCON Edge Connectors

.100" (2.54mm) Density for .062" (1.59mm) Boards



TRW Cardcon Edge Connectors are also available with .100 (2.54mm) center spacing. These low cost edge connectors are available in double readout only. The bifurcated semi-bellows contacts make them highly suitable for applications involving vibration or board irregularities. They are available less mounting ears, or with .128" (3.25mm) mounting holes or with 4-40 threaded bushing. They meet applicable performance criteria of MIL-C-21097.

Insulator Material: UL 94V-0 rated glass filled polyester. Color—Blue.

Contact Material/Plating: Contacts are available in alloy 260 spring brass. Standard finish gold over nickel in contacting area. Gold flash on tails copper overall underplate. Contact factory for other contact material and plating options.

Shock: Per MIL-STD-202E method 213B, condition "C."

Temperature Cycling: 5 continuous cycles (−65°C to +125°C) per MIL-STD-202E method 107D, condition "B."

Vibration: Per MIL-STD-202E method 204C, condition "B."

Humidity: Per MIL-STD-202E, method 103, condition "B."
650 at sea level.

Current Rating: 3.0 Amperes.

Contact Resistance at Rated Current: 0.010 Ohms Max.

Insulation Resistance: 1000 Megohms Min.

Polarizing Key: Between-contact type Distributor Part No. 50-PK-2; or In-contact type Distributor Part No. 50-PK-4—Order separately.

Card Guide: Distributor Part No: 50-GP-1B. Order separately. Part is blue to match connector.

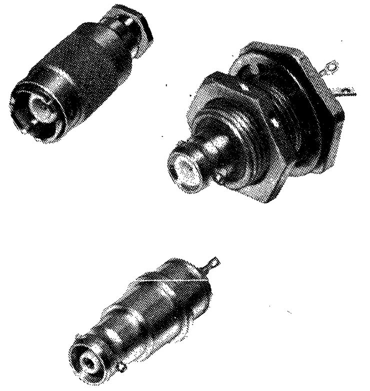
Cylindrical Connector Division
TRW Electronic Components Group

Nu-Lok 1200 Series Coaxial Connectors



These QPL approved coaxial connectors eliminate the weak link in fluid measurement, instrumentation and data transmission systems.

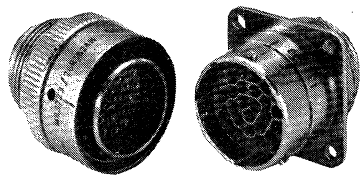
TRW Nu-Lok 1200 Series Coaxial Connectors deliver repeatable connection integrity, assuring consistently accurate readings. Studies indicate that 90 percent of system malfunctions result from the interconnecting cable/connector.

Many Nu-Lok 1200 Series miniature environment-resistant coaxial connectors are QPL approved...designed to meet all the requirements of MIL-C-25516. They provide resistance to high vibration levels and other adverse environments.

They are corrosion resistant against hydrocarbon fuels, lubricants, sea water, etc, easy to install and maintain with common tools and are impedance matched—insensitive at frequencies up to 1 GHz.

The Nu-Lok 1200 Series offers the highest reliability available from a miniature coaxial connector, with proven integrity in critical low/high impedance circuits.

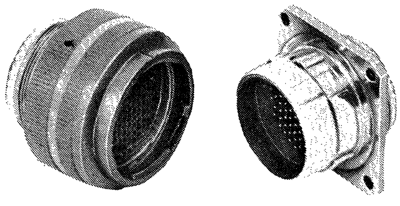
MIL-C-83723 Series III Cylindrical Connectors



The TRW Nucon series are built to exceed the specifications of MIL-C-83723 Series III. The design combines the exacting high reliability miniature connector specifications of MIL-C-26500 with a rear-release contact retention system.

All plug and receptacle shells are machined from aluminum bar stock to ensure close mating tolerances and concentricity. The closed entry-socket insulator will not accept a pin contact that is bent beyond a pre-established limit. The rubber interfacial seal on the pin side has raised bosses around each pin. These bosses engage the socket chamfers to provide an occlusive moisture seal.

Vibra-Lok™ IV Mil-C-38999 Series IV Connectors

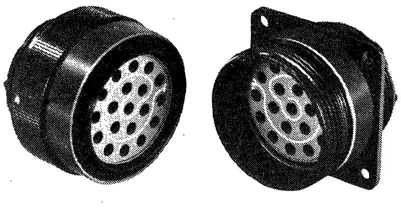


Vibra-Lok IV coupling provides a rugged, fool-proof, quick-disconnect operation in a subminiature electrical connector. The Vibra-Lok mechanism distributes the coupling load over solid metal lands, while internal drive threads provide the mechanical torque required to engage contacts and interfacial seal.

Vibra-Lok IV connectors cannot be coupled (or partially coupled) until key/keyway alignment has been achieved—keys drop into keyways with a positive "feel" before coupling can begin. 90° coupling ring rotation brings the plug to the fully mated position with the mating receptacle.

Superior EMI/EMP shielding is provided by gold-plated beryllium-copper grounding fingers compress on the smooth uninterrupted receptacle's circumference. Grounding occurs prior to contact engagement. Pre-alignment of each contact pair is assured by the Vibra-Lok coupling mechanism with no chance for skewed contact engagement.

CN0966 and CN0967 (MIL-C-26500) Series Connectors



These threaded self-locking vibration-proof environmental plug connectors incorporate the same field-proven features as the MIL-C-26500 connectors. Where harsh environments and severe vibration exist, the design of CN0966/CN0967 connectors provide the complete protection necessary for maintaining electrical continuity.

With stainless steel shells and fluorosilicone grommets, these connectors are especially suited to resisting engine fluids and high temperatures. Industries such as chemical processing, jet engines, and petroleum refining are using these connectors, which are designed to operate continuously at 200°C. The CN0966/CN0967 are capable of taking short exposures up to 800°C and can easily handle up to 2000 CPS vibration.

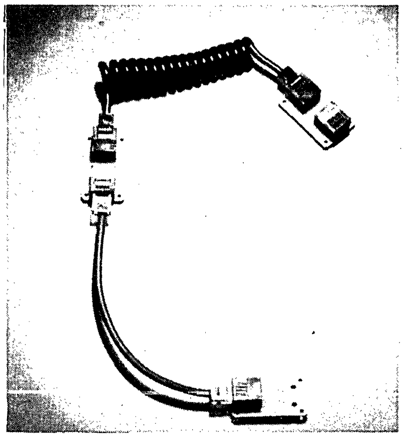
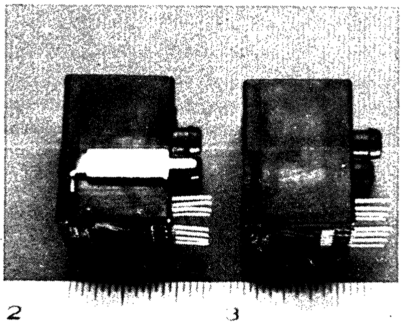
NEW V.P. PRODUCTS

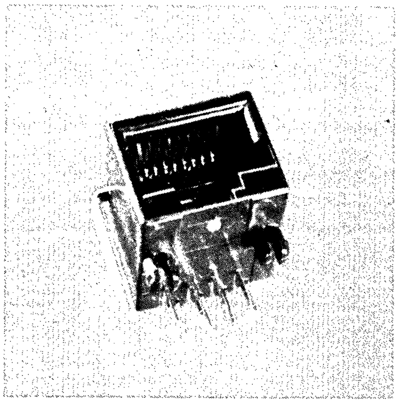
- Low profile female PCB connectors with external ground strap. Ground positions can be 1, 2, or 3. Available as a 8-10 or a 6-8 size.
- Ultra-flexible flat shielded cable because of unique shielding method.
- Low profile 6-8 female PCB connector designed to minimize PCB board spacing. PCB can be spaced as close as ½". Designed to handle 8 active lines with standard 6 position housing.
- 6-8 male plug, standard 6 position modular plug body size which can have up to 8 active lines.
- Unique double shielded construction over the conductor bundle that provides very high levels of signal emissions of high speed transmission.
- 8-10 male plug, standard 8 position modular plug body size which can have up to 10 active lines.
- Low profile 8-10 female PCB connector designed to minimize printed circuit board spacing. P.C.B. can be spaced as close as ½". Designed to handle 10 active lines with standard 8 position modular body size.



Virginia Plastics low profile female PCB connectors are designed to eliminate micro-second interruptions utilizing a beryllium copper contact system which typically yields 100 grams of pressure on each contact. The unique male to female contact arrangement results in 100 times the mating area of traditional modular PCB connectors. Low profile connectors were designed to minimize printed circuit board spacing. Boards can be spaced ½" from one another. Available in 4, 6, or 8 position housings. The outside dimensions of all low profile connectors are identical for ease in board layout and attractive side by side compatibility. The facade line of connectors was developed to meet the needs of customers currently using V.P. connectors. The front dimensions of this connector are the same as our MCJ series connectors for compatibility with existing designs of products in use. All Virginia Plastics' connectors are 100% electrically tested for contact interruptions by oscilloscope or high speed circuit tester.



2 3
10 9



FEATURES:

- Housing is made from high temperature thermoplastic with a flammability rating of 94V-0
- Fits printed circuit board grids of .050" located on .100" centers
- Designed for wave soldering
- Snap-look feet provide positive locking to PCB
- Designed for printed circuit board of .062 inch thickness
- Meets FCC part 68 requirements

SPECIFICATIONS:

- Height of low profile connector on board is .500" max

CONTACT MATERIAL AND PLATING THICKNESS:

- .015 inch hard temper beryllium copper
- 100 u inch nickel plate overall
- 100 u inch of tin/lead on solder post over nickel
- 15 u inch gold alloy in contact area over nickel

- Each spring contact portion of each contact within the female connector shall have a typ. contact normal force of 100 grams

GROUND STRAP LOW PROFILE

An innovative concept for modular grounding systems is the Virginia Plastics' low profile PCB connector with internal contact/external ground strap. The ground strap uses a large surface area to efficiently drain emissions. Ground strap connections bypass PC traces by directly going to the ground plane, reducing EMI emissions.

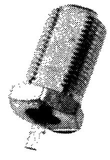
WALL~ABLE MANUFACTURING CORPORATION

1800 NORTH CLYBOURN AVENUE • CHICAGO, ILLINOIS 60614 • (312) 440-1000

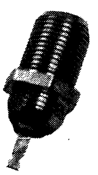
For over 30 years, Wall-Able has been an innovator in the design and manufacture of low-cost connectors. Our ability to provide extraordinarily fast response to major OEM special requirements has earned us a reputation we've grown with. If you have requirements for custom components and critical deadlines, use our years of experience and know-how to economically fill your needs.

We're proud of our diverse selection of quality connectors, both standard and special designs. Listed on these pages are a variety of available Wall-Able products which may help you in your connector requirements. Try us to solve your next connector problem.

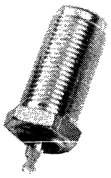
F Style Connectors



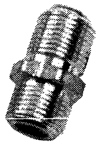
J75-59-7



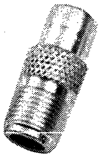
J75-59-0



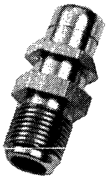
J75-59-6



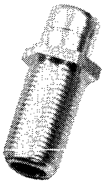
J75-59-13



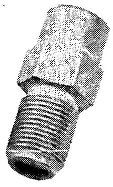
J75-59



J75-59-3



J75-59-4

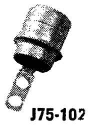


J75-59-5

Widely used in CATV-STV and related applications, Wall-Able's connectors feature custom contact designs and solid reliability. Our F to phono adaptors offer flexibility for many cost-effective connection combinations. The double isolation adaptor J75-59-5 incorporates the $\frac{1}{16}''$ minimum spacing required by UL in TV antenna applications.

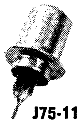
Wall-Able provides high-quality cost-effective F style connectors, which are always state of the art.

Phono Jacks

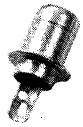


J75-1021

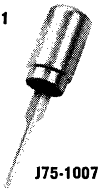
J75-1001



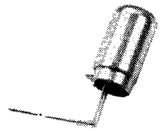
J75-1183-1



J75-2183



J75-1007



J75-2190

Still the industry's most economical 2-conductor connectors, Wall-Able's variety of phono jacks is second to none. Panel mount, solder, and printed circuit styles, with or without solder stopping shoulders, are available with your choice of a variety of center conductor contacts. Jacks with special grooved shells to mate with our PSL spring plugs are also available for extra reliability.

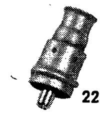
Phono Spring Plugs (PSL Series)

126F-3-15

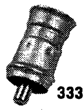
126F-6-15

176F-6-18

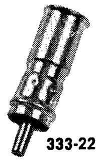
410-167-6



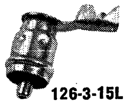
225F-6-15



333-15



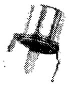
333-22-1



126-3-15L

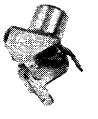
Wall-Able's patented spring lock plugs offer the ultimate in phono connector reliability. Virtually indestructible in use, the mechanical and electrical advantages of this product have been proven by every major OEM. Available with a variety of wire entry sizes and center pin lengths.

Phono Jacks — Saddle Style

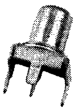


J75-2111S

J75-2118



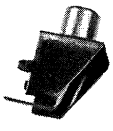
J75-2028-1



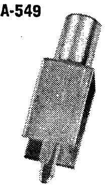
WA-549

J75-1163S

J75-2029S



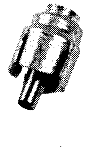
J75-1177S



J75-2077S

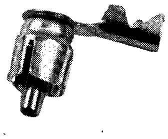
Wall-Able's large assortment of phono jacks can all be supplied ready for PC or solder assembly with a variety of tooled saddles. Specially assembled to avoid saddle-jack intermittency, these components offer cost-effective assembly methods.

Phono Plugs — Tulip Style



P75-2290

P75-2121-3



P75-1002

Wall-Able offers a variety of phono plugs for low-cost applications, utilizing low loss XXXP-FR insulators and standard pin lengths from $\frac{3}{8}''$ to $\frac{11}{16}''$. Right angle or straight cable strain relief variations are also available.

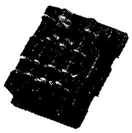
WALL~ABLE MANUFACTURING CORPORATION

1800 NORTH CLYBOURN AVENUE • CHICAGO, ILLINOIS 60614 • (312) 440-1000

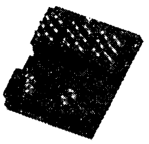
Relay Sockets

WA-928

WA-922

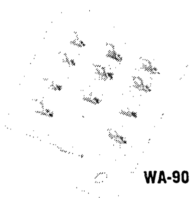


WA-937



WA-961

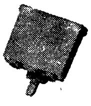
WA-907



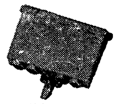
WA-909

General-purpose KU, Miniature KH, 8 & 11 pin round, and telephone type relay sockets are all available as standard products. Efficient multi-cavity molds, highest quality, UL-approved, flame retardant molding compounds and close tolerance spring brass and phospher bronze contacts assure long-life reliability.

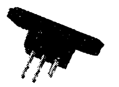
Contacts/Contact Housings



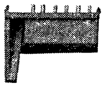
WA-815-8



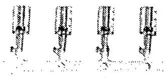
WA-816



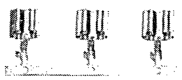
WA-927



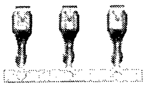
WA-954



WA-339-2

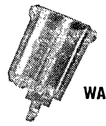


WA-382

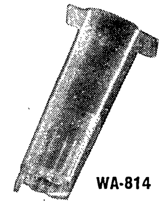


WA-302-140

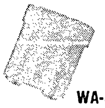
WA-808-2



WA-815-2



WA-814



WA-812

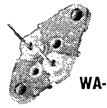
WA-813

Unique custom contacts and housings designed to solve specific customer requirements have long been a Wall-Able specialty. Single and multiple wire terminations for .093 pins, locking female terminals for .205 jewel disconnect tabs, PC edgeboard connectors and other parts have been cost-effectively and quickly engineered. Use our experience to reduce your connector costs and increase their reliability.

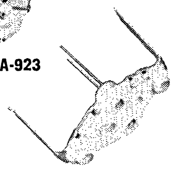
Power Transistor Bases

WA-932

WA-923



WA-920



WA-943

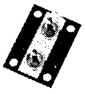
Heavy duty, flame retardant molded transistor bases are manufactured with PC, 6-32, or 4-40 threaded saddles. A wide variety of contacts can be supplied in whatever plating best suits the individual requirements.

Harness Assemblies

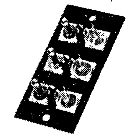
WA-512

UL and CSA approved standard 18GA, 4-contact lamp socket assembly is assembled with durable urea housings. Special wire assemblies can be designed and produced.

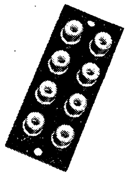
Phono Jack Boards



WA-546-1



WA-544



WA-543

Phono jacks can be mounted independently or grouped on flame retardant phenolic boards or metal plates for use in audio and other phono base plate applications. Special common grounding links are also available.

Screw Terminals & Assemblies

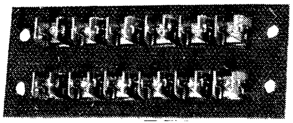
WAJ-332

WAK-116

WAU-332

HU-375

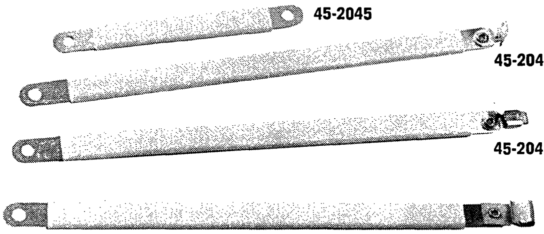
WA-2120



WA-703-510

Wall-Able's patented screw/nut snap-in terminal is available individually or in board mounted multiple assemblies. Chances of breaking the wire connection are minimized with this style assembly. Standard 6-32 screw terminal assemblies are also available.

Ground Straps



45-2045

45-2045-3

45-2045-2

45-2045-1

As a major supplier of flat strap ground assemblies, Wall-Able manufactures a variety of straps for all electronic products where a low-cost, highly effective ground is desired. Snap-on, anti-rotation rivet type, and special grip style clips are available to speed the assembly operation.

"Tiered Terminal": Two rows of type 970 DS are offset by half of the pitch. Produces an effective pitch of 2.5 mm / 0.098 in.																	

*: Terminal strips can be butted side by side to fom any requested pole configuration without losing center-to-center spacing.
†: Each circuit is equipped with a test hole.

Terminal body accommodating 20-12 AWG: available for types: 970 DS, 972 DS, 960 DS, 962 DS, 97 EDS, 977 DS, 977 OPDS. It allows the connection of several conductors.

Extra Features: Screen print marking, adhesive labelling strips. Blocks can be supplied without wire protector. Most types can be supplied with solder pins exceeding their standard length and up to 75mm/3 in long.

Moulding: Glass fibre reinforced Polyamide 6.6
Upper temperature limit: short-time 200°C/392°F
continuous 100-120°C/212-248°F
Cold resistant to: −50°C/−58°F
Terminal: Tin-plated Brass
Soldering Pin: Tin-plated copper, for excellent solderability
Wire Protector: Tin bronze
Screw: Zinc-plated steel, yellow chromated
HOW TO ORDER: Indicate Type and No. of Circuits, e.g.: 950 DS-12 is type 950 DS with 12 circuits.

°: soldered onto PC-board, the counterpart is removable.
*: terminal block can be butted side by side to form any requested pole configuration without losing cente-to-center spacing.

Based on the standard program of screw-connectors for printed circuits an unmatched line of Plug-In Systems are available. A stainless steel spring provides the contact pressure to ensure a reliable connection not only to the plug, but also to other components. All systems offered provide for a quick connect and disconnect of wiring to PCB. There are many advantages and benefits to using these components:

- Subassemblies manufactured at different places are equipped with either the plug or header of the selected WECO plug-in screw-connector system. At the time the final assembly is to be finished one has only to insert the plug into the header. No more wiring is necessary.
- Peripheral appliances can be connected to the main PC-board avoiding risk of changing wires by mistake.
- For service purposes a PC-board can easily be disconnected. The plug may then be used for testing the PC-board.
- The plug also connects onto the PC-board, when direct wiring into a screw-connector is difficult because of limited space.
- Service-ability.

Moulding: Glassfibre reinforced Polyamide 6.6, grey color.
Upper temperature limit: short time: 200°C/392°F
continuous: 100-120°C/212-248°F
Cold resistant to: −50°C/−58°F

Terminal Body: Nickel-plated brass
Spring: Stainless steel strip
Plug: Tin-plated brass
Soldering Pin: Tin-plated copper, for excellent solderability
Wire Protector: Tin bronze
Screw: Zinc-plated steel, yellow chromated.

Extra Features: Screen print marking; adhesive labelling strips; Blocks can be supplied without wire protector; Carrying plates are available to additionally interlock each assembly, to increase creepage distance to panel and provide absolute sure connection in vibration treated environment.

How To Order: Please indicate type and no. of circuits, e.g.: 95 SVDS-05 and 95 FB-05. This is the pluggable arrangement of type 95 SVDS and 95 FB, with each 5 circuits per strip.

Plug-In Screw Connectors for Printed Circuits 97 K / 97 RFBS DS 97 KS / 97 RFBS DS

WECO

International Approvals: VDE rated 0110

	Header For Horizontal Plug-In	Header For Vertical Plug-In	Plug		
Poles	Order No. 97 K	Order No. 97 KS	Order No. 97 RFBS DS	Length (L) MM.	IN.
2	**12.873.303**	**42.873.303**	**20.873.272**	10	0.39
3	**13.873.303**	**43.873.303**	**20.873.273**	15	0.59
4	**14.873.303**	**44.873.303**	**20.873.274**	20	0.79
5	**15.873.303**	**45.873.303**	**20.873.275**	25	0.98
6	**16.873.303**	**46.873.303**	**20.873.276**	30	1.18
7	**17.873.303**	**47.873.303**	**20.873.277**	35	1.38
8	**18.873.303**	**48.873.303**	**20.873.278**	40	1.57
9	**19.873.303**	**49.873.303**	**20.873.279**	45	1.77
10	**20.873.303**	**50.873.303**	**20.873.280**	50	1.97
11	**21.873.303**	**51.873.303**	**20.873.281**	55	2.17
12	**22.873.303**	**52.873.303**	**20.873.282**	60	2.36

Blocks can be installed end-to-end to form any required pole configuration while maintaining center-to-center spacing.

Keying Pins	Order No.	Length x Width MM.	IN.
97 KPL	**14.496.001**	6 x 6	0.24 x 0.24
97 KKL	**14.496.004**	3 x 5	0.12 x 0.20

This two piece assembly combines the reliable WECO screw wire clamping technique with the ease of P.C. connector pluggability. Available from 2 to 12 poles, the plug-in direction is horizontal to P.C.-Board when using the header 97 K. The plug-in direction is vertical to PC-Board when using the header 97 KS. To prevent accidental disconnection, plug and header are made to interlock. To prevent accidental interchanging or mismating of blocks the header 97 K / 97 KS can be coded with both the keying pins 97 KPL and 97 KKL. These have to be inserted into the keying slots of the header 97 K / 97 KS and then correspond with nippers on top of the 97 RFBSDS moulding. 97 KPL and 97 KKL will be shipped each four pieces as a set.

Instead of using the plug 97 RFBSDS, one may alternatively use our type 97 FBSDS (see pages 59-61). The combination 97 K / 97 FBSDS or 97 KS / 97 FBSDS then does not feature the advantage of interlocking and keying.

Upper Temperature Limit:

Short-time:	200°C / 392°F
Continuous:	100-120°C / 212-248°F
Cold-resistant to:	−50°C / −58°F

Resistance to Tracking: non-tracking factor KB > 380
Terminal Body: Tin-plated brass
Spring: Stainless strip steel
Wire Protector: Tin bronze
Screw: M3 x 5.5
Zinc-plated steel, yellow chromated.

How to Order:

Please provide the basic 8-digit Order Number. If you desire options, they may be obtained by adding the appropriate option code with a dash, (e.g.: 20.873.272–CN).

Available Options:

CN: Consecutive Numbering (Screen Print).
SN: Special Numbering to customer requirements (Screen Print). Please provide sketch when ordering.
NWP: Blocks without wire protectors.

6	**16.873.306**	17,5	0.69	3	**20.873.273**	15	0.59
8	**18.873.306**	22,5	0.89	4	**20.873.274**	20	0.79
10	**20.873.306**	27,5	1.08	5	**20.873.275**	25	0.98
12	**22.873.306**	32,5	1.28	6	**20.873.276**	30	1.18
14	**24.873.306**	37,5	1.48	7	**20.873.277**	35	1.38
16	**26.873.306**	42,5	1.67	8	**20.873.278**	40	1.57
18	**28.873.306**	47,5	1.87	9	**20.873.279**	45	1.77
20	**30.873.306**	52,5	2.07	10	**20.873.280**	50	1.97
22	**32.873.306**	57,5	2.26	11	**20.873.281**	55	2.17
24	**34.873.306**	62,5	2.46	12	**20.873.282**	60	2.36

Blocks can be installed end-to-end to form any required pole configuration while maintaining center-to-center spacing.

Keying Pins	**Order No.**	Length x Width MM.	IN.
97 KPL	**14.496.001**	6 x 6	0.24 x 0.24
97 KKL	**14.496.004**	3 x 5	0.12 x 0.20

The 97 KE header is the double-level execution of our 97 K, described on the foregoing page.

The rear row of the P.C. pins has a distance of 10mm / 0.394" to the front row P.C. pins and is transposed by half a pitch, thus providing a high circuits density on small space.

The two piece assembly combines the reliable WECO screw wire clamping technique with the ease of P.C. connector pluggability. Available from 4-24 poles the plug-in direction is horizontal to P.C.-Board. To prevent accidental disconnection, plug and header are made to interlock. To prevent accidental interchanging or mismating of blocks the header 97 KE can be coded with both the keying pins 97 KPL and 97 KKL. These have to be inserted into the keying slots of the header 97 KE and then correspond with nippers on top of the 97 RFBSDS moulding. 97 KPL and 97 KKL will be shipped each four pieces as a set.

Instead of using the plug 97 RFBSDS one may alternatively use our type 97 FBSDS (see pages 59-61). The combination 97 KE/ 97 FBSDS then does not feature the advantage of interlocking and keying.

Technical Data:

UL 300 V, 10 A, 22–14 AWG Cu	CSA 300 V, 10 A, 22–14 AWG Cu
File: E69841	**File:** LR24322

Pitch: 5 mm / .197" to DIN 40801
Rated Voltage: 380 V to VDE 0110 Insulation Group B
Rated Current: 10 A
Nominal Cross-Section: 2.5 mm^2 / 22–14 AWG Cu
Breakdown Voltage: 2500 V
Tightening Torque: 4.5 lb / in.
Stripping Length: 5.5 mm / 0.2"
Recommended Hole Diameter in P.C. Board: 1,30 mm / 0.051"
Contact Resistance of the Plug and Socket Arrangement: <1 m Ω

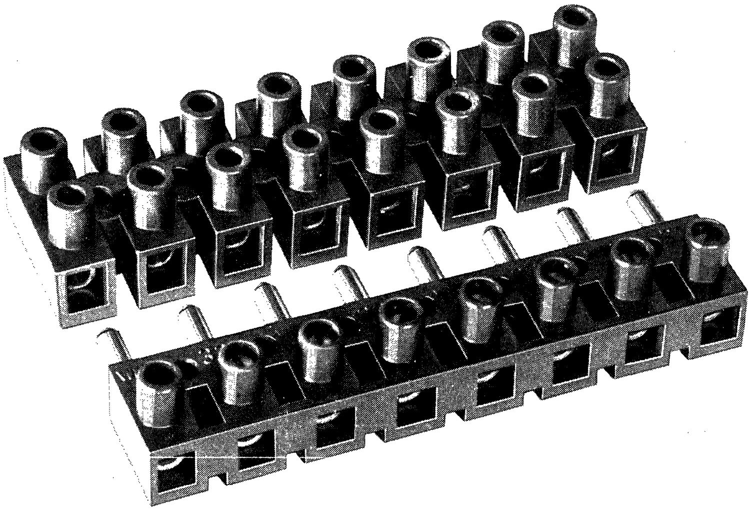
PLUG AND SOCKET SCREW-CONNECTOR SYSTEMS FOR PANEL/CHASSIS MOUNTING

Drawings see facing page.



International Approvals: **VDE rated 0110**

Plug and Socket Connectors are particularly suitable for installations where simple circuit closing and opening is required.
By pre-wiring various equipment sections, it is possible to use Plug and Socket Connectors to provide a quick and reliable connection at final assembly. Therefore wire confusion is avoided. Blocks can be coded (color coding, labelling, etc.) to ensure proper connection.

Some of these assemblies are available for printed circuit application. Standard strip has 12 circuits and can easily be field cut to required number of poles or ordered as required. A mounting hole is provided between each circuit. The terminal screws are backed out and ready for wiring. The dead front design is for safety and avoids short circuitry.

Each screw connection is equipped with a wireprotector to prevent damage to the wire from the turning screw (except types 323 FBW, 324 STFB, 324 STFS). The wireprotector is a thin plate placed between screw and wire.

To obtain low contact resistances on connectors, a high contact pressure is required. This leads to relatively high withdrawal forces. To facilitate the assembly, we therefore recommend that from 7 poles onwards two male and one female plug and socket connector should be used.

For the protective conductor pole the connectors can be equipped with leading plugs or sockets on request. This means that the protective conductor connection is made first when plugging-in and disconnected last.

MATERIAL:

Moulding: Flexible natural Polyamide, white color
Terminal body: Nickel-plated brass
Spring: Stainless steel strip
Wire Protector: tin bronze
Screw: Zinc-plated steel, yellow chromated
Upper temperature Limit:
short-time: 140-160°C / 284-320°F
continuous: 80-100°C / 176-212°F
cold-resistant to -40°C / -40°F

How To Order: Please indicate Connector Designation and No. of circuits requested. Complete assembly to be ordered would read as follows, e.g.: 302 SVDS-06: is male connector 302 SVDS with 6 circuits.
302 FBDS-06: is female connector 302 FBDS with 6 circuits
BST 302-06: is blank marker strip for six circuits. Shall marker strip be factory labelled, please provide sketch of marking arrangement.
Leading plug or socket for protective contact pole: Please provide sketch of required circuit configuration.

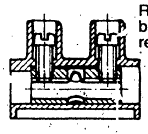
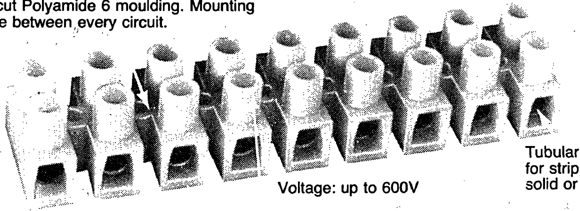
SOCKET TERMINAL STRIPS FOR PANEL/CHASSIS MOUNTING



Dead front design:
Screws and terminal body are recessed in polyamide insulating moulding for safety and to prevent short circuiting.
Recessed screws backed-out and ready to wire
Wire protector prevents damage to stranded wires



Modular Design: Flexible and easy to cut Polyamide 6 moulding. Mounting hole between every circuit.
Tubular wire entry for stripped, unterminated solid or stranded wire
Voltage: up to 600V
Amperage: up to 80A
Wire range: 22-6 AWG

High circuit density from 39-21 circuits per foot. Depending on product type selected.

International Approvals: UL SP DVE ⓘ Ⓝ Ⓢ Ⓓ S KEMA EUR

The terminal strips are used for connecting stripped, unterminated, stranded or solid copper wires; ranging from 22-6 AWG, depending on product type selected. Each strip has 12 circuits and can easily be field cut to the required number of poles. They can also be ordered factory-cut in any requested pole number.

A mounting hole is provided between each circuit. The terminal screws are backed-out and ready for wiring. The screws are protected against working loose and cannot fall out.

Each circuit has a wire protector to prevent damage to the wire from the turning screw. The wire protector is a thin steel plate placed between screw and wire. All metal parts of the terminal are completely recessed in the flexible polyamide 6 moulding. This dead-front design ensures safety and prevents short circuiting. Its flexible construction allows use on uneven surfaces. For proper circuit identification, we supply marker strips. They may either be factory numbered or individually marked with a felt pen. The terminal strips meet most world approvals, including UL, CSA & VDE.

Terminal strip types 302 HDS and 323 HDS can be supplied with screw/solder lug connections. Please contact WECO for complete catalog.

How To Order: Please indicate Type and No. of circuits requested, e.g.:

302 HDS-12 is terminal block 302 HDS with 12 circuits.
BST 302-12 is blank marker strip for twelve circuits. Shall marker strip be factory labelled, please provide sketch showing marking arrangement.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

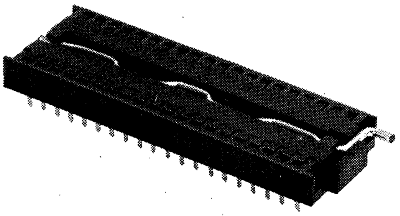
WELCON PRODUCTION SOCKETS

SERIES 630 "PRO-ZIF®"



FEATURES
- Easy to operate... Lever controls opening and closing of contacts.
- Light lead wiping action while contacts close.
- Designed for use in many production applications.
- Very compact, standing less than 1/4" off the p.c. board.
- Single face-wipe contacts on .600" and .900" pin row centers.
- Operating range of −40°C. to +105°C.
- Available in 24-, 28-, 40- and 64-leads.
- Beryllium copper contacts plated with 50 microinches of tin/lead or 30 microinches of select gold.

TEST SPECIFICATIONS
Contact Insertion Force: Zero force with device leads at specified centers.
Contact Resistance: 20 Milliohms max. initial; 25 Milliohms max. after 100 insertions or 100 hrs. at 105°C.
Test Current: 1 Ampere.

Operating Temperature: Continuous −40°C. to +105°C.
Insulation Resistance (At 500 V.D.C.): 5,000 Megohms minimum.
Dielectric Withstanding Voltage: 600 Volts A.C. RMS minimum.
Durability: 100 Cycles—No electrical degradation.
Thermal Shock: MIL-STD-1344, Method 1003. No physical or electrical degradation.
Moisture Resistance: MIL-STD-202. Method 106; except omit steps 6B and 7A. 300 Megohms minimum.
Vibration: MIL-STD-1344. Method 2005. Condition 111. No electrical interruption greater than 1 microsecond.
Mechanical Shock: MIL-STD-202. Method 213. Condition 1. No electrical interruption greater than 1 microsecond.

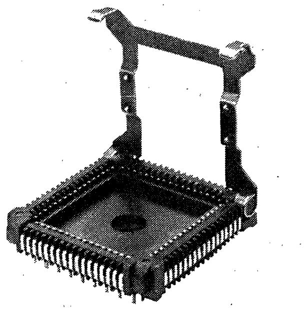
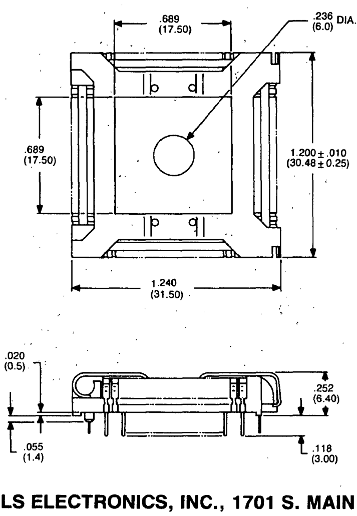
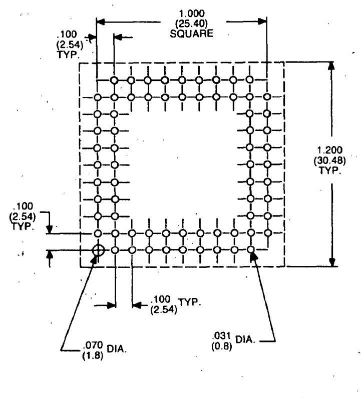
SERIES 835 LEADLESS CHIP CARRIER



FEATURES
- Only .252" above the pc board with the device installed.
- 68-lead socket accepts JEDEC Type A, Type B and Type D leadless ceramic devices.
- Open lid designed to accommodate heat sinks and to provide maximum air circulation for cooling of the device.
- Three corner registration notches.
- Solder tail lengths available in .118".
- Easy access to probing of contacts with the device in place.
- Molded polarizing post.
- Lid is easily installed... no tools needed.





TEST SPECIFICATIONS
Contact Resistance: 30 Milliohms maximum after 50 insertions.
Vibration: 10 to 500 Hz at 10 g's per MIL-STD-202, test condition A, Method 204 (monitored for one microsecond opening).
Shock: 50 g's per MIL-STD-202, test condition A. Method 213 (monitored for one microsecond opening).
Salt Spray: Per MIL-STD-202, test condition B (48 hours), Method 101, 30 Milliohms max.
Operating Temperature: −65°C. to +120°C.
Thermal Shock: −65°C. to +120°C. per MIL-STD-202, test condition B, Method 107. No failures.
Humidity: 90% to 95% at 40°C. per MIL-STD-202, Method 103B. 30 Milliohms maximum contact resistance. 1000 Megohms minimum insulating resistance.
Soldering Heat Resistance: 260°C. ±5°C. at 10 seconds per MIL-STD-202, test condition B, Method 210A.

MATERIALS
Socket Body: Glass-filled polyphenylene sulfide, a UL 94V-O rated material
Contacts: Beryllium copper.
Contact Plating: 10 or 30 microinches of select gold over 50 microinches of nickel; tin-lead over nickel in solder tail area.
Lid: Stainless steel.

Part No. 835-0680113: 10 microinches of gold in the contact area

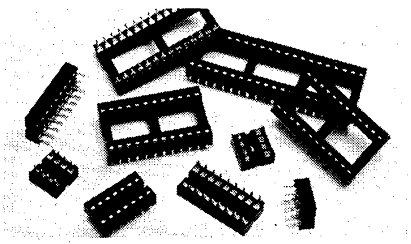
Part No. 835-0680313: 30 microinches of gold in the contact area

Footprint pattern is viewed from above, looking down through the socket.

NOTE: Drawings show dimensions in inches over millimeters.

WELCON PRODUCTION SOCKETS

SERIES 801 and SERIES 811 SINGLE BEAM



FEATURES

- Single face-wipe contacts providing low contact resistance with high retention force.
- Wide target area and chamfered cavity for easy insertion of IC devices.
- Overstress barrier to protect against contact damage.
- Stands only .175″ above the pc board.
- Available with .125″ long crimped tails or .145″ long straight tails.
- 50 microinches of tin/lead plating on phosphor bronze, or beryllium copper contacts.

TEST SPECIFICATIONS

Rating: 250 VAC
Dielectric Withstanding Voltage: 1000 VRMS minimum.
Insulation Resistance: 5000 Megohms minimum.
Capacitance: 1 Picofarad maximum.

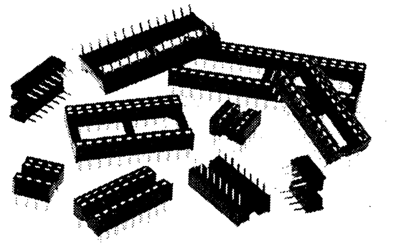
CONTACT MATERIAL

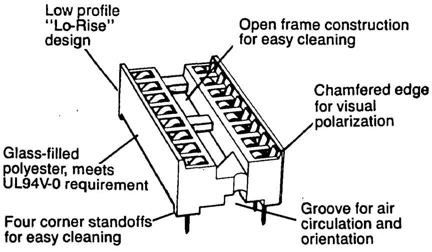
"4" denotes phosphor bronze. To order beryllium copper change the "4" to a "1".

SERIES IDENTIFICATION

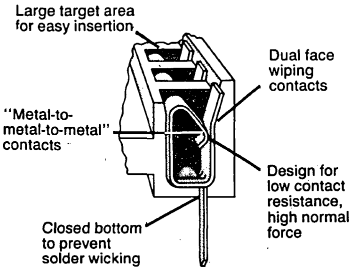
To order Series 801 sockets change the "XX" to "01" and for Series 811 sockets change the "XX" to "11".

SERIES 802 "LO-RISE®"





Low profile "Lo-Rise" design
Open frame construction for easy cleaning
Chamfered edge for visual polarization
Glass-filled polyester, meets UL94V-0 requirement
Four corner standoffs for easy cleaning
Groove for air circulation and orientation



Large target area for easy insertion
Dual face wiping contacts
"Metal-to-metal-to-metal" contacts
Design for low contact resistance, high normal force
Closed bottom to prevent solder wicking

WIRE WRAP TAIL LENGTH

To order 3-level tails, substitute "3" in place of the second "2" counting back from the end of the part number.

CONTACT PLATING

"28" denotes contact plating. Specifications are as follows:

"28".	Min. .10 microinches gold over min. 50 microinches nickel on the inner clip; min. 100 microinches electro deposited tin/lead on the outer sleeve.
"29" in place of "28":	Min. 50 microinches electro deposited tin/lead over min. 50 microinches nickel on the inner clip; min. 100 microinches electro deposited tin/lead on the outer sleeve.
"18" in place of "28":	Min. 30 microinches gold over min. 50 microinches nickel on the inner clip; min. 100 microinches electro deposited tin/lead on the outer sleeve.
"06" in place of "28":	Min. 30 microinches gold over min. 50 microinches nickel on the inner clip; min. 10 microinches gold over min. 100 microinches nickel on the outer sleeve.

FEATURES

- Two-piece contact consisting of a machined outer sleeve and a four-leaf inner clip.
- Large, tapered entry providing easy insertion of the device leads and multiple points of contact.
- Electro deposited tin/lead plating or gold plating on the beryllium copper inner clip to assure high reliability.
- Brass outer sleeve plated with 100 microinches of electro deposited tin/lead or 10 microinches of gold.
- Low profile...only .165″ above the p.c. board.
- Closed bottom to eliminate solder wicking.
- Four versions available...solid or open frame with solder or wire wrap tails.
- Wire wrap tails in 2- and 3-levels.
- Open frame construction to allow maximum air circulation under the IC.
- Entry area designed to accept flat lead DIP ICs or .016″ to .021″ diameter round leads, maintaining a high retention.

TEST SPECIFICATIONS

Contact Resistance: Conforms to MIL-S-83734E.
Vibration: 10 to 2000 Hz @ 20 g's per MIL-STD-202, test condition D. Method 204 (monitored for one microsecond opening).
Shock: 150 g's per MIL-STD-202, Method 213 (monitored for one microsecond opening).
Capacitance: Between adjacent terminals @ 1KHz per MIL-STD-202, Method 305. .4 pf maximum.
Capacitance: Between opposite terminals @ 1KHz per MIL-STD-202, Method 305. .02 pf maximum.
Terminal Anchoring Retention: Pull against barb locking action. 12 lbs. minimum.
Thermal Shock: −65°C. to +105°C. per MIL-STD-202, test condition F, Method 107. No failures.
Low Voltage Conductivity: Measured at an open circuit voltage of 10 microvolts. .1 milliamp minimum.
Salt Spray: Per MIL-STD-202, Method 101, condition B (48 hours). 20 Milliohms maximum.
Moisture Resistance: Per MIL-STD-202, Method 106, minus steps 7A and 7B. No damage.
Endurance and Exposure to Ammonium Sulfide Atmosphere (Contact): Exposure after 10 insertions of a DIP IC. Contact resistance: 30 Milliohms maximum.
Insulation Resistance (At 500 V.D.C.): Per MIL-S-83734E. 500 Megohms minimum.
Dielectric Withstanding Voltage (At 1000 Volts AC): MIL-STD-202. Method 301 between adjoining conductors.

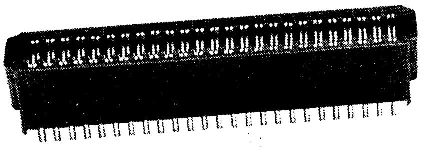
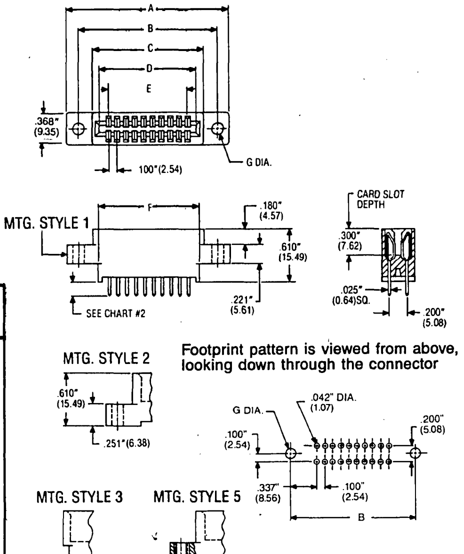
WELCON CONNECTORS

SERIES 400-401 CARD EDGE ON .100″ x .200″ SPACING



DESIGN FEATURES:
- Copper alloy contacts plated with low cost select gold.
- CSA and UL recognized
- 10 Milliohms maximum contact resistance.
- Designed for easy board insertion.
- Available in solder or wire wrap tails.
- Multiple mounting styles.
- Connector body molded of UL 94V-0 rated black polyester.



NOTE: Drawings show dimensions in inches over milimeters.

WELCON CONNECTORS

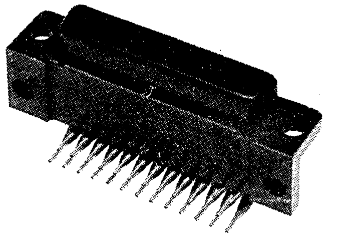
SERIES 420 D-SUBMINIATURE, ALL PLASTIC



DESIGN FEATURES

- Standard .590″ footprint.
- Right angle receptacle on the face edge for mating ease.
- CSA and UL recognized
- Rigid tail with built-in heat sink and excellent contact alignment.
- Large circuit cavity lead-in
- Copper alloy contacts with gold plating in the contact area and tin/lead plating on the tails.
- RS 232 and RS 449 compatible.
- Connector body molded of a UL 94V-0 insulator.

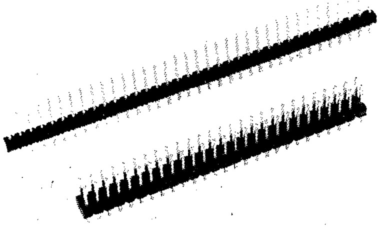
WELCON PRODUCTION SOCKETS

SERIES 442-445 PIN HEADERS



FEATURES
- Unshrouded version from 1 to 36 positions in single and double rows.
- Standard .025″ square male posts on .100″ contact centers.
- Available in two post lengths, .230″ and .318″, both industry standards.
- Choice of four tail lengths for soldering or wire wrapping.
- Pins with nickel underplate and tin/lead all-over or gold in the contact area.
- Tin/lead plating on the tails.
- Easy to break apart into any desired length.
- Side-to-side and end-to-end stackable.
- Compatible with Welcon Series 480 insulated shunts.

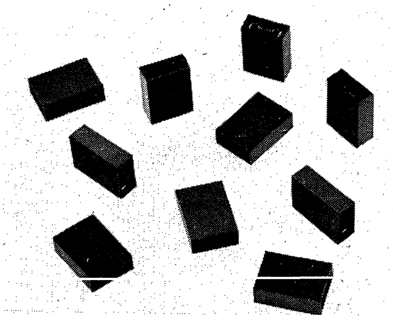
SERIES 480 INSULATED SHUNT



FEATURES
- Two position shunt, designed for .025″ square header posts on .100″ contact centers.
- Beam type contact spring.
- Metal-to-metal contact on both sides of the header post.
- Positive contact retention
- Vertically stackable on parallel or perpendicular axes.
- Copper alloy contacts plated with 50 microinches of tin/lead or a minimum 30 microinches of select gold over 50 microinches of nickel.
- Body molded of glass-filled resin, a UL 94V-0 rated material

BURN-IN TEST SOCKETS

GENERAL FEATURES

- Low cost select gold plating on beryllium copper or Pfinodal® contacts.
- Dual, face-wipe contacts for long, dependable life.
- For burn-in applications up to 200°C.
- Large target area for fast, easy insertion of IC devices.
- Tin plate on the solder tails.

TEST DATA

Contact Insertion Force: 180 grams max. per contact pair.

Contact Withdrawal Force: 30 grams min. per contact pair.

Contact Resistance: 20 Millohms max. at 1 Ampere.

Insulation Resistance [At 500 V.D.C.]: Per MIL-STD-1344, Method 3003. Result; 5000 Megohms minimum.

Dielectric Withstanding Voltage: Per MIL-STD-1344, Method 3001. Result: 600 V.A.C. (RMS) minimum.

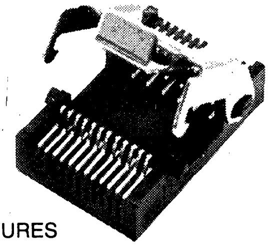
Moisture Resistance: 24 hrs. at 85°C., 85% RH. Result: 1000 Megohms minimum.

Temperature Cycling: 168 hrs. at 200°C. Result: No electrical or mechanical degradation.

Durability: 10,000 insertion/withdrawl cyles. Result: No electrical or mechanical degradation.

CONTACTORS & CARRIERS

FLATPACK CONTACTORS



FEATURES

- Improved performance with new extra-low-force ("ELF") contacts.
- Improved insertion of IC devices... no lead damage.
- Side air slots to allow maximum air circulation.
- For burn-in applications up to 200°C.
- No carrier distortion under high temperature burn-in.
- Tin plating on the solder tails.
- One-piece, non-corrosive stainless steel latch.

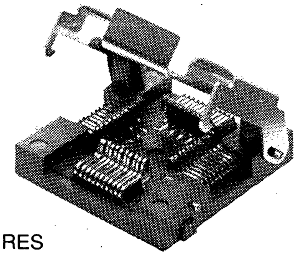
QUAD PACK CONTACTORS



FEATURES

- High lead count quad pack contactors for high density packaging.
- Beryllium copper contacts plated with 30 microinches of select gold.
- New extra-low-force ("ELF") contacts.
- Longlasting metal hinge pins.
- Contactor body molded of a high temperature material for burn-in applications up to 200°C.
- No carrier distortion.
- Easy insertion of IC leads.

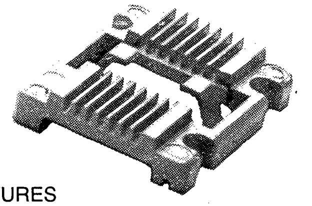
ONE-PIECE CARRIERS



FEATURES

- Specially designed for automatic loading and unloading.
- Can be molded from ESP materials.
- Increased retention... IC device will not drop out.
- Allows for large marking area.

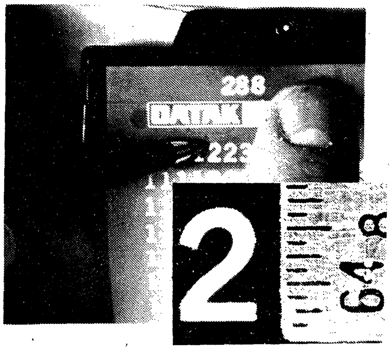
DATAK dry TRANSFERS and COATINGS



HOW THEY WORK . . . These amazing letters, words and art patterns transfer to any clean surface. Just rub down with a ballpoint pen! Heat-resistant adhesive is safe for diazo copies.

MASTER ART QUALITY . . . Razor sharp edge definition makes DATAK transfers superb for original artwork or prototypes.

TAILOR-MADE COATINGS . . . Any old protective spray won't work over dry transfers. Our formulas flow evenly over the transfer and protect it perfectly on all classes of surfaces: glass, paper, wood, metal, plastics or paint.

TITLES and COMPONENT DESIGNATION SETS for ELECTRONIC EQUIPMENT

Newest **professional titles** have thousands of ⅛"(12 pt.) and 0.105"(10 pt.) words for both standard and micro-sized equipment control panels. Sets have 24 sheets, 3½" x 5". 12 point sets use bold face type, have one letter and one number sheet; 10 point sets are bold face titles and include 4 each, light and bold number and letter sheets. Letter and number sets have 12 indentical sheets.

Component designation sets (TERMINAL and CHASSIS MARKING sets) include 24 sheets, 3½" x 5" of sequential numbers, letters and letter combinations conforming to ANSI Y32.16 and IEEE STD 200. This series is ⅛" size only. See JotDraft #JD192-JD251 for .085" through .250" designation numbers. Coat transfers for protection. See coatings section.

DATAMARK™ TITLES, PATTERNS, ALPHABETS and NUMBERS

These are smaller assortments for specialized electronic applications. Type matches professional 9581-9671 series. Switch patterns match some that are in #968 Meter Dial and Switch Marking set. All sets contain six 3½" x 5" sheets. Coat transfers for protection. See coatings section.

METER DIAL and SWITCH MARKING SET

Crisp meter graduations let you modify dial scales fast. Saves time and money compared to a "mod center" job. Tap switch marks are preset to 7.5° and 15° detents but will transfer to any angle. The smallest switch pattern will match knob skirts down to 0.5" diameter. Type style matches 10 point professional title and letter sets described above. Complete set includes 12 sheets, 5" x 7" in black, white and red. Refill sheets available separately in uncut sets of 4 identical sheets. *K19/1 available in white as a refill only. Protect panels with DATAKOAT or HARDKOAT. Do not coat dialplates.

DATAKOAT™ PROTECTIVE COATINGS

DATAKOAT is a 100% acrylic high-solids water-clear coating for metals and plastics. It encapsulates dry transfers in a tough film. Its solvents will not attack most plastics, lacquers or cured enamels. The dry film has a high dielectric strength, is very flexible, moderately hard and extremely resistant to weathering and UV exposure. DATAKOAT is not recommended for transfers on paper.

04176 DATAKOAT Brushcoat and Thinner Kit (1 oz. ea.)	**$3.20**
04177 DATAKOAT Gloss Spray (12 oz. net wt.)	**4.65**
04178 DATAKOAT Matte Spray (12 oz. net wt.)	**4.65**

HARDKOAT™ PROTECTIVE COATINGS

HARDKOAT is a clear, very high-solids quality cellulosic resin for paper, wood and other porous surfaces. Its solvents fuse the dry transfer into the surface while its resins bond to the surface with an extremely hard, flexible film. HARDKOAT may be used on metals and many painted surfaces where it gives superior protection against abrasion and scratching. Its solvents temporarily soften many plastic materials, so it should be used with caution. Multiple heavy coats may have a very faint yellowish tint. Use DATAKOAT if an absolutely water-clear coating is essential.

04170 HARDKOAT Gloss Spray (12 oz. net wt.)	**$4.65**
04171 HARDKOAT Matte Spray (12 oz. net wt.)	**4.65**

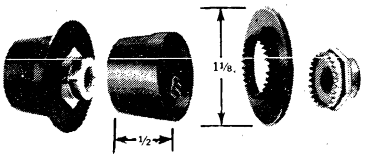
All Ratios are ±10%.

Employ precision ball bearings. For rotary control of components. Smooth motion. Ruggedly built, permanently sealed and lubricated.

Input and output shafts operate in SAME DIRECTION. Type "RDL" provides "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of Type "RDLCC" is the output shaft in the rear.

KNOB RATIO DRIVE



9 to 1 ratio (to dial skirt).
1:1 to potentiometer.

Cat. No. KRD-11 (Plain Gripping Surface)
Cat. No. KRD-12 (Knurled Gripping Surface)

Other ratios designed to specifications. Engineered miniature gear system, permits precise, fine tuning of controls.

Brass gears; black anodized aluminum knob and dial. Available with knurled or non-knurled outside knob. Available for 1/8" shafts. 1/4" on special order.

IN-LINE RATIO DRIVE — 6.3:1

For smooth rotary control of components requiring Vernier adjustments. Suitable for use where panel space is at a premium. Durable, ruggedized ball bearing mechanism.

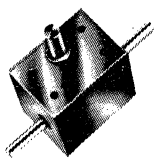
RIGHT ANGLE RATIO DRIVES — Versatile, Miniaturized, Right Angle Rotary Controls

RAWG ( )
RABG ( )



Dual output stainless steel shafts at right angles to input, provide ideal type instrument control. With matched bevel, worm gears cover wide range of ratios.

Especially useful for handling spring or gravity-loaded components. Output shaft automatically locks in any desired position yet remains free for smooth adjustment by input shaft. Assembled in dust-proof housings, gears are permanently pinned in place mounted in oilite bearings, and held under constant pressure.

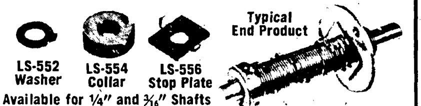
LIMIT STOP COMPONENTS

Limit stop as a component to design with, potentiometers, capacitors, or other similar units. Added washers enables an increase in stop range (with precision). Dual locking screws maintain settings under all conditions of shock and vibration.



Typical End Product

LS-552 Washer **LS-554** Collar **LS-556** Stop Plate

Available for ¼" and 3/16" Shafts

Specify — (3) for 3/16"
— (4) for ¼"

Can be designed internally into JANSET knobs.

MINIATURIZED SLIP CLUTCH

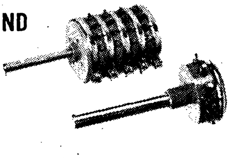
Couples ⅛", 3/16" or ¼" input-output (2 set screws). Also 'D' shafts (with or without set screws). Torques: 2 to 50 oz./in. All metal components. ⅝" dia. x ⅝" long.

APS-1723

Shaft sizes (—2=⅛") (—3=3/16") (—4=¼")
min. & max. torque in oz./inches

Example: Part #APS-1723-34-8-16
To fit 3/16" dia. shaft to ¼" dia. shaft, and torque 8 to 16 oz./inches.

POTENTIOMETERS / PRECISION WIRE WOUND



- **LINEAR AND NON-LINEAR** • **SINGLE AND MULTI-TURN**
- **PENDULUM OPERATED** • **SECTORS AND GYRO PICKOFFS** • **SWITCHES**

Reliable, competitively priced wire-wound potentiometers for commercial, industrial and military electronic equipment manufacturers.

- **EXCELLENT LINEARITY:** 0.03% available in single turn 5" diameter unit.
- **LONG LIFE:** Over two million revolutions with base metal windings.
- **WIDE TEMPERATURE RANGE:** Available for operation from −55°C to +125°C.
- **LOW NOISE** Platinum alloy winding also insures low noise level.
- **RELIABILITY:** Welded taps for better mechanical and electrical connections.
- **HIGH RESOLUTION:** Wire as fine as 0.0003" diameter can be used.
- **CUSTOM DESIGNS:** Fast prototype delivery on special linear or non-linear units.
- **PRECISION CONSTRUCTION:** Anodized aluminum housings and polished steel shafts.
- **ACCURATE FUNCTIONS:** Welded taps to a single turn of wire eliminates shorted sections of winding at intermediate taps.
- **RUGGEDNESS:** Meets all applicable MIL Specs.
- **MAXIMUM STORAGE LIFE:** Maintained over long life and extreme environments by unique wiper designs compatible with winding configurations.

RESISTOR, VARIABLE. Single and Dual gang.

Conforms to MIL-R-12934. Resistance values as required. Linear design.
Power: 1 watt continuously, up to 70°C.; Mechanical rotation—300°; Electrical rotation—270°.
Noise level less than 1% of total resistance.
Operating torque: 4.0 to 6.0 oz. in., detent where specified.
Detent torque: 5 oz. in. above operating torque, or
6.0 to 14.0 oz. in. including unit operating torque.
Min. rotational life: 25,000 cycles. Operating Temp.: −65°C to 150°C.
Clutch Knobs: These potentiometers must be adjusted solely by clutch knobs, limiting the torque exerted on shafts beyond their rotational limits. See Jan catalog. Special designs upon request.

HI-VOLTAGE INSULATED COUPLINGS U.S. PATENT NO. 2,681,387

MEETS MILITARY SPECIFICATIONS — TEMPERATURE · HUMIDITY · SHOCK · VIBRATION · FUNGUS

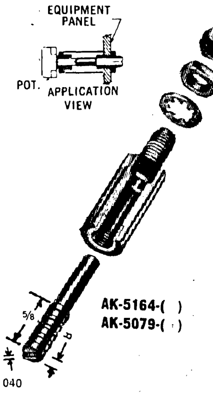
HI-VOLTAGE INSULATED COUPLINGS

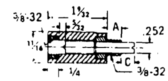
15 KV Breakdown—10 lb/in. torque
Series No. AK-5079 and No. AK-5164

Stainless steel shaft and screwdriver tip molded-integrally with Diallyl Phthalate per Mil Specs. Shock ,vibration and fungus proof, they operate with ease over an ambient temperature range of −75°C to +175°C. Supplied with mounting hardware.

Screwdriver tip fits standard slotted shafts (potentiometer, etc.) without further machining. Suited to adjust high voltage controls protecting operating personnel. Also used to reduce ground capacitance on other types of instrument controls.

For Commercial Instrument Applications . . . Available in general purpose Bakelite.





STANDARD TYPE

Cat. No.	Dimensions in Inches			
	"A"	"B"	Shaft	"C"
AK-5164-X-1	3/8	3/16	Slotted	5/16
AK-5164-B-1	3/8	1/16	Slotted	5/16
AK-5164-X-2	3/8	3/16	Slotted	15/32

AK-5079-X-2	9/16	3/16	Slotted	9/32
AK-5079-B-2	9/16	1/16	Slotted	9/32

Note: (3/16″) to be used with 1/8″ long shaft.
(1/16″) to be used with 1/4″ long shaft.

VOLTAGE: 6000VDC INSULATED COUPLINGS FOR 1/8″ SHAFTS

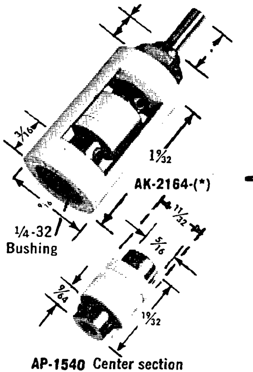
Material: Cycalac, Brass, Nickel Plated.

*Insert letter "S" or "N" followed by first two numbers of decimal equivalent, for fractional length of shaft beyond bushing.
"S" = with slot. "N" = no slot.

Typical Part Number: AK-2164-N31 =
5/16″ long shaft beyond bushing (standard), no slot. If length is 1″ use "X".

AK-2164-SX =
1″ long shaft beyond bushing, slotted.
If length exceeds 1″, use "X" and decimal equivalent for balance of number.

AK-2164-NX31 =
1 5/16″ long shaft beyond bushing, no slot.



AP-1540 Center section of AK-2164-(*)

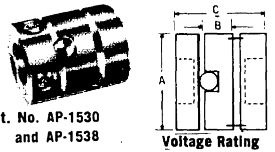
AK-4160-B-2	3/8	3/16	No Slot	1/2

Series No. AK-4160
For TV and Industrial Applications

Withstands 30 KV, made of high grade Bakelite throughout except for stainless steel screwdriver tip molded in drive shaft. Mounting Hardware supplied.

AUTOLINEAR (INSULATED) SHAFT COUPLINGS

2.5-5 KV Breakdown Universal, Miniature, Self-aligning



Cat. No. AP-1530 and AP-1538

Voltage Rating
AP-1530, 2500 V
AP-1538, 5000 V

Part No.	Dimensions in Inches			
	Dia. Hole	"A"	"B"	"C"
AP-1530-2	1/8	1/2	15/64	59/64±1/32
AP-1530-3	3/16	1/2	15/64	59/64±1/32
AP-1530-4	1/4	1/2	15/64	59/64±1/32
AP-1538-2	1/8	1/2	27/64	1 7/64±1/32
AP-1538-3	3/16	1/2	27/64	1 7/64±1/32
AP-1538-4	1/4	1/2	27/64	1 7/64±1/32

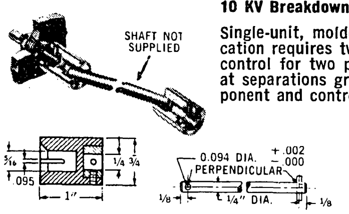
Accommodates either similar or dissimilar 1/8″, 3/16″ or 1/4″ shafts. Permits misalignment to 1/16″ and 5° angle. Operates free of backlash. Plastic insulator between cast aluminum hubs. Each hub has 2 set screws. Alodine finish. Also available with self-extinguishing low water absorption characteristic plastic insulator on special order.

Typical Part No.'s

AP-1530-34	accommodates a 3/16″ shaft one side, 1/4″ shaft on other.
AP-1538-22	accommodates two 1/8″ shafts.

OFFSET-SHAFT (INSULATED) COUPLINGS

10 KV Breakdown ±30° Offset AP-15299



Single-unit, molded Nylon-to-metal insert. Application requires two couplings — permits smooth control for two parallel shafts offset up to 30° at separations greater than 3″. Secured to component and control shafts by 2 set screws.

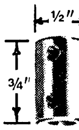
Note: Coupling is accomplished with a 1/4″ shaft of any length (not furnished). Coupling shaft keyed to coupler by steel drive pins supplied. See P. 9 for shafting.

1/4″ SHAFT COUPLING EXTENDER

AP-1010
Nickel plated brass with 2 set screws. 1/2″ O.D.; 1 3/4″ overall length.

AP-1321
Same as above, except extends 1/4″ shaft to 1/8″, overall length 2 1/2″. Aluminum clear iridite.

SHAFT COUPLING



AP-15150
Nickel plated brass coupling for joining two 1/4″ shafts. 4 set screws.

Cat. No. AP-15151
Same as above, 2 set screws.

JACK COVERS (TRIMMER COVERS)

Fit jack or panel bushings used to keep out dust and moisture and prevent inadvertent disturbance of control. Outer surfaces finished in standard colors of baked enamel.

STUD, GROUND Multi-termination ground lugs.
Electrically Sound • Easily Installed • Space Saving

- Provides equipotential chassis termination for ground leads.
- Minimizes resistance between circuit contacts and ground point.
- Diminishes noise, pick-up and regenerative feedback.
- Eliminates the need for buss bars or stacks of lugs.
- Can be use as "Floating Ground" with proper insulation.

JOLTA SHOCK TEST MACHINES

For Reproducible Impact-Shock Test Pulses

Engineered to reproduce the entire spectrum of all significant impact shock waves.

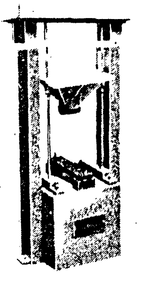
Designed for laboratory and production testing of light to medium weight components. Produced to meet practically all requirements of common Mil. Spec. qualification tests (JAN-S-44, Mil-Std. 202A, Mil-T-12679A). Each JOLTA is electronically calibrated to certify compliance with test specifications.

JOLTA — Floor Model Nos. F-3003-C1, C2, C3 — Precision-machined magnesium casting utilized for higher shock amplitudes. Typical tests with these units 50 to 5000 G at .2 to 11.0 millisecs. For high impact testing, accessory springs and twin anvil combinations yield impulses of 0.2 millisecs to 5000 G.

SPECIFICATIONS — JOLTA SHOCK TESTERS

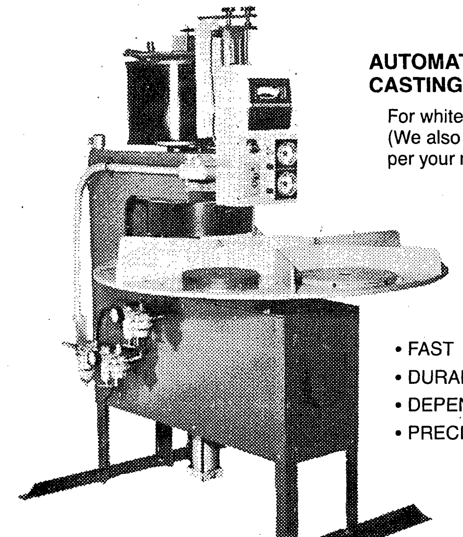
Model No.	Carriage Volume	Test Weight	"G" Ranges
F-3003-C-1	5″ cube	0-12 lbs.	50-1500
F-3003-C-2	5″ cube	0-4.0 lbs.	350-5000

FEATURES
- **Economical**
- **Simple to Operate**
- **Rugged**
- **Uniformly Accurate**



For Production Testing, Can Be Automated for Continuous Operation

Note:
New design allows for quick changecvers of accessories.



AUTOMATIC CENTRIFUGAL CASTING MACHINE

For white metal, pewter and lead.
(We also produce castings per your requirements).

- FAST
- DURABLE
- DEPENDABLE
- PRECISELY BUILT

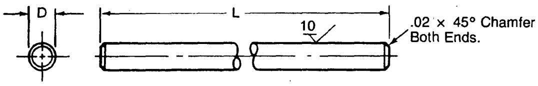
—2	1/4	29/64	1 7/16	9/16	13/32	5/16	3/8	8-32

Cat. No. AP-1197
Screw, Captive
1/16" slotted knurled head (7/16" O.D.)
1 1/4" overall length; 8-32 thread.

PRECISION GROUND SHAFTS .303 Stainless Steel



Tolerance

Shaft Dia. (D) PGS1 = $^{+.0000}_{-.0001}$

PGS2 = $^{+.0000}_{-.0002}$

PGS3 = $^{+.0000}_{-.0003}$

Standard Diameters — 1/16" Increments

2 = .1247
3 = .1872
4 = .2497
5 = .3125
6 = .3747

To specify: add (D) dia. × (L) length to prefix above.

IE. PGS1 — 2 × 6.375 = .1247 $^{+.0000}_{-.0001}$ Dia. × 6.375 Long.

PGS2 — 3 × 3.250 = .1872 $^{+.0000}_{-.0002}$ Dia. × 3.250 Long.

PGS3 — 4 × 8.625 = .2497 $^{+.0000}_{-.0003}$ Dia. × 8.625 Long.

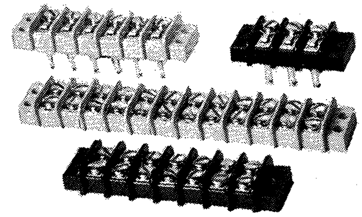
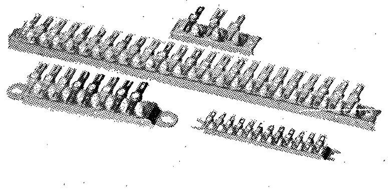
Also available:
COMMERCIAL TERMINAL BLOCKS
in single or double row styles with accessories (marker strips, insulating covers, quick connect and solder terminals, jumpers, etc.)



MULTI-WAY INSULATING TERMINAL STRIPS
(Avail. in standard number of terminals—up to 24 terminals).



RELAY SOCKETS with Fixed or Removable Contacts!

Jan's relay sockets are specifically designed for use with plug-in relays . . . in electronic circuit applications which demand quick and easy assembly and maintenance.

Available with dip-solder pin terminals for printed circuit assembly, or solder cup and turret terminals for direct wiring. For applications requiring removable contacts, solderless wire crimp terminations are available for #16, 20, 22, or 24 AWG wire sizes.

A variety of mounting styles are offered including . . . tapped inserts with studs for top chassis mounting; thru hole; or tapped inserts with removable standoffs and screws for mounting on either side of chassis or panel. Unexpected disconnect because of vibration is eliminated by fastening the relay to the socket. Polarization dots and/or index holes (optional) aid in plugging in relay correctly. Socket contact material is spring tempered phosphor bronze gold plate over silver plate. Body material is Diallyl Phthalate, fiberglass filled per MIL-M-19833.

*To Order Specify: (1) frame only; (2) frame with clear window; (3) frame with clear window scribed with a center line.

JAN's molded, black, shock-resistant plastic escutcheons are available in an exceptionally wide variety of different types and sizes. They provide a pleasing window to frame dial plates mounted behind the panel.

Plastic escutcheons are available in the following ways: frame only; frame with clear windows; frame with clear window scribed with a center line.

For especially large working areas, stamped aluminum escutcheons, finished in dull black are available to meet the needs for space economy. Withstands temp. shock −65°C to +80°C. NON INFLAMMABLE.

BEZELS

JAN's Bezels enhance the appearance of the instruments on which they are used. These units are functionally designed to provide OPTIMUM UTILIZATION OF THE C.R.T. SCREEN, as well as safety against tube breakage and danger to operating personnel.

JAN Bezel Assemblies are supplied with a **bezel, calibrated graticule,** (where applicable) **light filter** and **C.R.T. cushion.** Bezels are finished in a smooth dull black non-reflecting surface. These units fit JAN Mu-Metal Shields.

Edge-lit Bezels (E.L.B.A.)**
These Bezels are designed to provide edge lighting of the engraved scale-calibrated graticule by means of pilot lights.

Camera Mount Bezel
These units provide an integral cast mounting flange that fits all standard 3", 5" and 7" C.R.T. cameras.

DISTINCTIVE FEATURES

- Engineered for 2", 3", 4", 5", 7", 8", 10" C.R.T.
- Maximum display area
- Precision engraved, scale-calibrated graticules; standard or to customer's specifications
- Materials and finish to "Mil Spec"
- Heavy buna-S shock cushion
- Models for edge-lighting
- Phosphor-matched light filters
- Non-reflecting matte surfaces
- Rugged camera mounts
- Models for curved and flat-faced C.R.T.

JAN'S MAGNETIC SHIELDS are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields. In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See preceding pages for specifications on JAN'S BEZEL ASSEMBLIES.

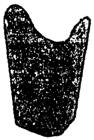
VIEWING HOODS Black neoprene rubber, contour-molded, fits the shape of face. Keeps out ambient light when viewing scope.

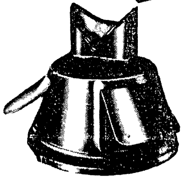
Cat. No. H-465
Can be used as viewing hood, on 2¾" dia. bezels. (#1427; 1428; 1429). Also serves as adapter to permit use of face fitting neoprene rubber viewing hoods. All aluminum. Dull black enamel finish.

Cat. No. H-689-1 (5⅝" I.D.)
Used with following Jan Bezels; 19636; 19495; 13584; 1465.
No. H-689-2 (4⅞" I.D.)
Used with JAN Bezel #545

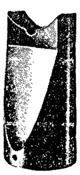
Cat. No. H-1008
TO FIT RECTANGULAR BEZELS
Can be adapted for smaller I.D.'s. Can be used with JAN Bezel CP-1328P. Can be adapted for #1533-P.



Cat. No. H-1713

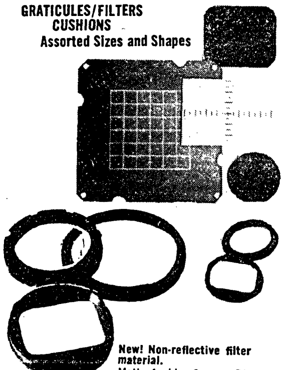


Cat. No. H-1063 (12" I.D.)
Flanges provided for hand access to PPI settings.



Cat. No. H-1361 (5²⁵⁄₃₂" I.D.)

GRATICULES/FILTERS CUSHIONS
Assorted Sizes and Shapes



New! Non-reflective filter material.
Matte 1 side. Grey or Blue. Other colors on special order.

Finish: M- Matte; G- Glossy; /WD- White Dot; /WL- White Line
Colors: A- Black; B- Red; C-Grey. (See pages 20-21 for other information.)
Typical Part No. K1697-(4)MA
(1/4" shaft, Matte Finish, Black)

SLIP-CLUTCH KNOB with Spinners

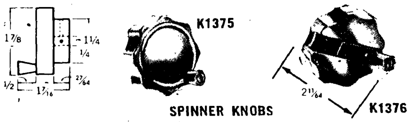
KS-1375-(4) & KS-1376-(4)

For driving devices such as variable capacitors, inductors, potentiometers, etc., the "slip-clutch"* automatically disengages and slips when pre-determined torque has been exceeded. Knobs are fluted, and equipped with either fixed or retractable spinner for fast turning. Backlash-free units safeguard against cranking beyond normal stops.

*Normally set for 3-6" lbs./in. Can be modified for other requirements.

Model K-1376-(4) is identical with K-1375 with additional feature retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in open or closed position. K-1376 for use where economy of space is essential.

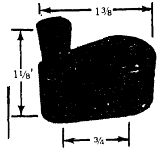
Cat. Nos. K-1275-(4) & 1276-(4)
In appearance, these knobs are identical with K-1375 and K-1376 but without Slip-Clutch. Molded Bakelite-to-metal-insert construction, two set screws for attachment to shafts.



SPINNER KNOBS

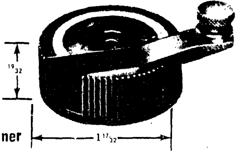
With Fixed or Retractable Spinners

Standard: Glossy finish. (Matte finish avail. on special order)



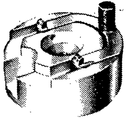
K-1125-(4) SPINNER KNOB

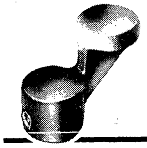
SK-1125 SLIP CLUTCH KNOB



MS-91522-1-(4)
Retractable Spinner
CRANK KNOB
Aluminum Olive Drab. Other colors and shaft dia. on request. 2 5/8" min. clearance required with handle in open position.

K1622
Retractable Spinner CRANK KNOB
Modified version to replace MS91522. Incorporates brake mechanism to lock control in position.





K1358-(2)
MINIATURE SPINNER KNOB
Nylon. 19/32" H. x 3/4" W.
Spinner section dia. 3/8".
Accepts 1/8" shaft or smaller.

K1357-(4) SLIP CLUTCH KNOB
Knurl aluminum. Twin set screws.
1 3/8" dia. skirt, tapers to
1" at top. Height, 1" Std. Torque
1 to 3 lbs./in. Avail. from 1/2 oz./in.
to 48 oz./in.
